THE following announcements appeared in the *Official Gazette* of the 6th instant:—

IMPERIAL ORDINANCE.

We hereby authorize the organization of a Special Exhibition Bureau and order the same to be duly proclaimed.

(Imperial Sign-Manual.)
(Privy Seal.)

ORDINANCE 52.

ORGANIZATION OF THE SPECIAL EXHIBITION BUREAU.

ART. 1.—The Special Exhibition Bureau shall form a part of the Department of Agriculture and Commerce, and shall transact all business connected with the Columbian World Exhibition to be held in the town of Chicago, Illinois, United States of America, in the year 1893.

ART. 2.—The Special Exhibition Bureau shall include the following officials:—One Chief; two Assistant Chiefs; several Councillors; five Managers, and several Secretaries.

ART. 3.—The Minister of State for Agriculture and Commerce shall be the Chief. The Assistant Chiefs shall be officials of *Chokunin* rank. The Managers shall be of *Sonin* rank. The Secretaries shall be of *Hannin* rank.

ART. 4.—The Councillors shall be chosen from among officials or men of learning or experience, and shall be appointed by the Cabinet at the recommendation of the Chief of the Bureau.

ART. 5.—The Chief of the Bureau shall have control over the officers of the various sections and shall decide all business relating to the Bureau. The Assistant Chiefs shall aid the Chief, and act in his stead should he be unable to attend to his duties. The Councillors shall investigate all such matters of importance connected with the functions of the Bureau, as may be submitted to them by the Chief. The Managers, in accordance with directions from the Chief, shall discharge the business of the Bureau. The Secretaries, under the instructions of their superior officers, shall do the written work of the Bureau.

ART. 6.—The Chief of the Bureau shall make all regulations connected with its work, and shall be competent to issue instructions to the Chief of the Hokkaido Administration, the Chief of the Metropolitan Police, and the Governors of Cities and Prefectures.

ART. 7.—The Chief of the Bureau shall be competent to assemble and take counsel of experts in relation to the business of the Bureau.

ART. 8.—The Chief of the Bureau shall be competent to employ assistance within the limits of the appropriation for the uses of the Bureau.

ART. 9.—The Chief of the Bureau shall be competent to engage foreign assistance and employ foreign aid within the limits of the appropriation for the uses of the Bureau.

ART. 10.—The officials of the Bureau shall serve without pay, but in case of the business being considerable allowances of 1,000 *yen* and 500 *yen per annum*, at most, may be made to the superior officials and the Councillos, respctively, within the limits of the appropriation.

ART. 11.—The Chief of the Bureau shall be competent to suitably reward the services of the officials, within the limits of the appropriation.

### THE ROYAL ACADEMY CHAIR OF ANATOMY.

WE mentioned in a recent issue that Dr. W. Anderson, formerly Medical Instructor to the Imperial Japanese Naval Department, and now a leading member of the Surgical Staff of St. Thomas's Hospital, was among the candidates for the Chair of Anatomy at the Royal Academy of Arts, vacant by the death of the well-known Professor Marshall. Our readers will be glad to hear that Dr. Anderson has been successful in his candidature. He was elected by 23 votes against 4. The result could hardly have been otherwise, for Dr. Anderson's high attainments as an anatomist are supplemented by an art reputation founded on enduring work. The testimonials accompanying his application, for the post at the Royal Academy, show the great esteem in which he is held by the lights of the medical profession. Dr. Bristowe calls him "a distinguished Surgeon, Anatomist, and Artist," and says that "as a Lecturer and a master in Anatomical Science he has no superior." Sir William MacCormac writes:—"Mr. Anderson has been for many years one of the most successful Teachers of Anatomy in London, and possesses also perfect knowledge of his subject. He enjoys, besides, a facility for accurate and artistic illustration of what he teaches, which not many possess and few could surpass." Numerous other expressions of equally strong, or even stronger, appreciation from the great medical men of London were readily recorded in Dr. Anderson's favour, and doubtless helped to secure his signal victory over all rivals. It is interesting to note that Dr. Anderson, in addition to his important surgical appointments at St. Thomas's Hospital, in now Senior Lecturer on Anatomy in the Medical School, Examiner in Anatomy at the Royal College of Physicians and Surgeons, Member of the Council of the Anatomical and two other of the principal Medical Societies, and Hunterian Professor of Surgery and Pathology at the Royal College of Surgeons. But among all his posts we imagine that none can be more congenial to him than the distinguished chair to which he has now been appointed.

### THE TROUBLES IN CHINA.

THE following telegram was placed at our disposal by Admiral Belknap, Commanding the United States Squadron on the China and Japan Station:—"Shanghai, June 8th 1891, 6.09 p.m. Last Friday riot at Kiukiang. English and French gunboats and *Palos* stopped it. Foreign women and children on *Inconstant*. Two men killed at Wuhu. *Palos* proceeded there immediately. Threatened trouble at Hankow. Gunboat *Porpoise* there. Serious apprehensions are again felt here. Foreign Ministers at Peking informed Chinese Government that if foreigners are not protected they will take vigorous action. Seven foreign gunboats up river." The state of affairs in China is evidently of a very disquieting character. Our Shanghai correspondent, whose letter we published on the 6th instant, referred at length to the belief, now becoming current, that all these disturbances in the valley of the Yangtze owe their origin, not to any innate hatred of foreigners or desire to expel them, but to the machinations of a secret society called the Ko-lao Hui, which aims at overthrowing the Manchu dynasty and replacing it by one of pure Chinese blood. This Society, which is said to be very powerful, its ranks including high officials, influential gentry, and *literati*, aims at embroiling the Government in disputes with foreign Powers and ultimately in a war which would furnish the desired opportunity for a successful rebellion. Experience shows that the tendency of the public mind is to elaborate extravagant hypotheses and harbour unsubstantial suspicions at times of crisis or tumult, and we therefore hesitate to accept an idea involving such a dark outlook for the foreign communities in China directly, and the relations between that country and the West indirectly. Still, when we consider the series of anti-foreign disturbances that have taken place within the past few months in the valley of the Yangtze, it becomes difficult to attribute the catalogue to a factor of such capricious activity as mere anti-foreign feeling. Commencing with the trouble at Yangchow, a few months ago, there followed the riot at Wuhu on May 12th; then the disturbance at Ngan-kin, six days later; then the outbreak at Nanking, after another interval of six days; then threatened riots at Hochow; then the issue of incendiary placards in Shanghai; and now we have an outbreak at Kiukiang; threatened troubles at Hangkow, with, apparently, fresh agitation at Wuhu and renewed danger in Shanghai. It will be observed that Admiral Belknap's telegram speaks of two men killed at Wuhu, but does not mention their

Digitized by Google

nationality. Official information received in Tokyo the same day says that the unfortunate men were foreigners, but gives Kiukiang as the seat of the tragedy. Of course it is conceivable that the occurrence of all this disorder at places situated along the banks of the same river may be attributable to interaction, and not to any far-reaching plot. In either case, however, affairs in China cannot but inspire great uneasiness. When foreign ships of war are obliged to interfere forcibly for the protection of their nationals within Chinese territory, the relations between China and the Treaty Powers cannot be very cordial.

* * *

On Wednesday morning we received from Admiral Belknap the following additional telegrams :—

Yokohama, Japan, June 10, 1891.

The following cablegrams were received by Admiral Belknap from Shanghai, China, last night :—

Shanghai, June 9th, 1891, 3.40 p.m.

Since McCurley telegraphed you this morning situation has changed. A band of Chinese, who have attacked Yangchow, were prevented at Chinkiang. Destroyed French Mission at Woosieh last night, and are reported to be at Soochow, 70 miles from here, now. Their route leads directly to Shanghai, and every indication they will come on to the hills, eighteen miles from Shanghai, destroy French Mission, and then attack Sicawei French Mission, four miles from Shanghai. A Russian and a French gunboat are now arriving for up the river, making nine gunboats for the river. One British and one German gunboat and *Alliance* here. I think it is a Chinese insurrection."

LEONARD, U.S. Consul General.

Shanghai, June 9th, 1891, 4.37 p.m.

From Commander MCCURLEY, U.S.N.

Mob Yangtze, Chinese destroyed church and buildings at Woosieh yesterday, 70 miles from here. Situation looks serious, and residents apprehensive ; ready to act here, or elsewhere promptly.

* * *

The following telegram dated at Kiukiang, June 6th, 1.15 p.m., has been courteously sent to us :—

Kiukiang quiet—Chinese troops guarding Concession—American residents out of city—Hankow quiet—*Porpoise Vipère* there—three ships here—men Green and Argent killed at Wusieh—was present at inquest—saw bodies coffined and sent to Hankow—all reports from rebel sources peaceable.

* * *

Another message, received on Wednesday night, dated Kiukiang, June 10th, says :—

Green customs officer—Argrens missionary British—*Iltis* gone Hankow.

* * *

A subsequent telegram from Commander Marthon, despatched from Kiukiang at 7.14 on Wednesday night, says :—

Twenty-two American missionary ladies arrived here safe to-day—all quiet.

## JAPAN AND THE RIOTS IN CHINA.

WHEN the telegrams reached Tokyo announcing a wide-spread outbreak against foreigners in China, it is stated that five Japanese men-of-war were at once ordered to hold themselves in readiness to proceed at a moment's notice to Shanghai, if indeed they were not actually despatched thither by a route so chosen as to afford an opportunity of recalling them on the way, should the need of their presence have disappeared. This fact suggests the great additional security which may be derived by foreigners from the proximity of Japan. Of course the Japanese Government would be extremely reluctant to take any action suggesting doubt of the competence of the Chinese Authorities to protect foreign life and property within the territories of the Middle Kingdom. But circumstances may easily be conceived in the presence of which the same obligation would devolve upon Japan as upon any other foreign Power, and we may be sure that she would not shrink from discharging her duty. In the event of the worst apprehensions being realised as to the revolutionary character of these seemingly anti-foreign riots, the safety of Shanghai might be seriously imperilled, and the presence there of four or five thousand Japanese troops—a force that could be despatched at a few hours' notice—might be as welcome to the local authorities as it certainly would be to the foreign residents. We sincerely trust that such contingencies are utterly remote, but it is not altogether amiss to refer to them.

## AN INCIDENT OF THE RIOTS IN CHINA.

IN the sad mysterious history of the recent anti-foreign viots in China, nothing more terrible has yet been told than the following incident, described by the Rev. Father Colombel as having happened contemporaneously with the destruction of the church, the priests' residences, the boys' school, and other buildings of the Christian mission at Tanyang :—"At one end of the enclosure, which is a very large one, there is a cemetery in which it has been the custom for a very long time to inter Christians of the town and children of the orphanage. The rioters dug up the bones and heaped them together. They put the heads in a pile and dragged the mandarin Heang to the spot, hauling him along, it is said, by his queue. One poor skeleton, on which there still remained some flesh and a few shreds of clothing, was carried off, and hung up in front of the priests' door, which looks out on the canal and a busy street. These outrageous doings were performed to the accompaniment of the usual calumnious and abusive shouts."

## KOREAN LEGENDS.

### BEGINNING OF HEREDITARY FEUD BETWEEN KOREA AND JAPAN.

FROM the very earliest times the tribes of Southern Korea had dealings with the dwellers on the islands of Japan. There is evidence of this in the language, customs, and traditions of the people ; but the first definite account of direct communication between the two is based upon events that were transacted about eighteen hundred years ago. The result of those events were so disastrous that there has always existed a hereditary feud which has more than once led to sanguinary war. The native account of these events illustrate the truth of the proverb "How great a matter a little fire kindleth." For some reason not recorded, the Japanese decided to cultivate the acquaintance of the people across the straits, and to that end an envoy was dispatched to treat with the King of Silla. It seems that these people of Silla were a proud, independent race, who were not greatly given to acknowledging the equality of their neighbours on either side : least of all the Japanese to whom they were, at that time, undoubtedly superior in civilization if not in power. When the envoy from Japan landed on the coast of Silla he proceeded straight to the capital, and was met on the way by an official named Sok-oo-ro who had been sent by the king to escort the envoy to the city. We can only conclude that it was out of wanton insolence that Sok-oo-ro addressed the envoy in these words : "You ought to have brought your King and Queen to be servants in the King of Silla's kitchen," and we cannot wonder that the envoy turned straight back and did not rest until he had reported this terrible affront to his island lord. A month of ominous silence passed, and then the watchers on the heights of Silla descried a countless fleet of vessels standing across the straits. When it was announced, Sok-oo-ro began to fear the results of his impertinence, and coming before the king confessed himself to be the cause of the hostile array, and begged to be allowed to go alone and try to appease the anger of the enemy. It was granted, and he hurried away to meet the army which had already landed and was advancing on the capital. He came and fell on his face before its commander, and confessed that he alone was the author of the gross insult that had been cast in the teeth of the Japanese King and he begged that their vengeance might be wreaked on him alone. He was instantly bound and burned alive before the eyes of the whole army. It is much to their credit that they then turned about and sailed back to their own land without striking another blow. The next year the same envoy was sent again to treat with the King of Silla. Arriving at the capital, he was given a fine house and a large corps of attendants. All seemed in a fair way to cement a peaceful and fraternal union between the two kingdoms. But the wife of Sok-oo-ro had not forgotten the horrible fate of her husband, and burning for revenge she went before the king and asked him to let her try to atone for her husband's incivility by becoming a servant of the Envoy. The king was surprised at such a request from a woman of her position, but suspecting no treachery he gave his consent. She had not been in the envoy's house long before she found means to put some deadly poison into his bowl of rice and within the hour she had her revenge. But at what a cost! For seventeen hundred years a deadly feud existed between the two peoples which resulted in two most sanginary invasions each of which reduced Korea to utmost misery. All this resulted from a hasty word.

### ORIGIN OF KOKORIA.

ON the northern boundary of Korea, midway between the Yellow and Japan seas, lies the lofty mountain called Pak Tou or "white head." Near the summit of this mountain in the crater of an extinct volcano, lies a little lake which gives rise to two streams, one called the Tumen river which runs eastward and empties into the Japan Sea, and the other the Amno river flowing south and west into the Yellow Sea. About two thousand years ago there was a little kingdom called Penya* just north of this mountain, its southern boundary being the Amno river. The king of this little state was very unhappy because he had no son. One day he mounted his horse and rode away into the forest until he came to a rushing torrent, on whose bank he knelt and prayed to the God of Heaven to give him a son. Remounting he turned his horse's head toward home. As he was passing a boulder which lay beside the path, his horse turned and faced the stone, sobbing and bending its head. The king in amazement dismounted and looked all about the boulder carefully, but could see nothing, and yet he could not get the horse to pass on. By this time the curiosity of the king was thoroughly aroused, and as a last resort he put his shoulder to the stone and pushed it over and there in the cavity beneath it he beheld the answer to his prayer—a little child of the colour of gold but shaped somewhat like a toad. Paying no attention to the apparent deformity, he lifted the child tenderly and carried it home under his cloak or outer garment. It was evident to the king that a child of such an origin must have a remarkable career before him, so he reared him very carefully, teaching him the use of the bow and the spear, so that he became the most skillful archer in the kingdom. When the time came for him to think of wedding, he did not wish to take one of the Puya maidens, so he mounted his horse and rode away to find a wife elsewhere. He found one among the people living near the mouth of the Amno river, and bringing her home was married to her after the rude custom of the land. After the ceremony she drew him aside and told him that she had a confession to make. She said : "I am the daughter of the Sea God, and the reason I am living on dry land, is this : One day I ran away from home and emerged from the water and walked upon the shore to see what the upper world was like. As I walked I beheld one of the princes of heaven standing on the bank of the Amno river and beckoning to me. Unsuspicions of harm I went to him—alas, and when I returned to my home my parents drove me from them and banished me to the upper world for my misdeeds. I am not worthy to be your wife." At this the prince looked very grave, but he decided to forgive her fault as it had been caused by a heavenly being. Not long after this she brought forth an egg, and the prince seeing it threw it out into the street. He was surprised, however, to see that whenever a horse or an ox passed by it came near and tried to warm the egg with its breath. So he ordered it to be taken away and cast in the midst of a field behind the town, but a great white stork came down from the upper air and spread its wings over it and warmed it against its breast. The prince ordered a blacksmith to break it with his hammer, but he could make no impression upon it. The mother

* Chinese Fuyu.

Digitized by Google

had it brought back to the palace and wrapped in warm cotton. In a few days the shell opened and then stepped out a beautiful boy whom they named Chu Mong. As he grew he became as wise and good as he was beautiful. But in time he had five brothers who were jealous of him because he was the heir, and who tried to induce their father to kill him. His mother heard of it and gave him warning, and he fled southward by night with three trusty followers. Arriving at the bank of the Anmo river, he was dismayed to find that there was no means of crossing; but the fish of the river rose to the surface and ranged themselves side by side in such solid ranks that the fugitives crossed over on their backs as on a bridge. He joined his fortunes with the people whom he found just ready to revolt from the weakened power of China, under whose hand they had been for many years. They made him king, and he, after four years of war, opened his court at Chol Bon,† and named the kingdom Kokoria. The origin of the name Kokoria is as follows:—The family name of Chu Mong was Ko, and he was born near Korya San, a mountain in Puya, and so he united the two to make the name of his new kingdom—Ko-korya or Kokoria.‡

SOK TOL HA.

ABOUT two thousand years ago there was a little kingdom somewhere in Japan called Tap Ha Ra, but its name and the fact that it was the birthplace of the hero of this story are all we know about it. A woman in that country, after a pregnancy of seven years, brought forth an egg. The people considered it to be a bad omen, and counselled together to take it away and destroy it in order if possible to ward off the danger which threatened. The mother in some way became aware of the design, and in order to save her wonderful progeny, she wrapped it in cotton and silk and put it in a strong water-tight chest and committed it to the sea—the Japan Sea. Not long after this the wife of a fisherman on the south-eastern coast of Korea near the harbour of Ajin, while walking along the shore, spied a floating chest which was being beaten against the rocks by the waves. With great difficulty she succeeded in passing a cord through the handle and dragging the chest up on the beach. It was too heavy to carry home so she pried open the lid with a mattock and there before her lay, wrapped in silks, a beautiful child. The fisherman and his wife were old and childless, and so considered this child to be a gift direct from heaven. They watched over him with exceeding care and went to the very extent of their scanty means to provide him with everything that his childish caprices coveted. From the day that he was able to walk all the magpies of the neighbourhoods came and followed him about like a bodyguard wherever he went. It was for this reason that his foster parents gave him the name of *sok*, which is the first syllable of the word meaning magpie. At the age of six his precocity was known throughout all the district. Never was there a child that showed such intelligence and thoughtfulness at such an age. At ten years he was a full grown man; not only so, but he had attained a gigantic size. He was nine *cha* high, equivalent to fifteen feet! His foster parents were not able to give him a good education, and he was compelled to follow with them the calling of a fisherman. But his parents could not bear to see his great talents wasted in this way, so they decided to send him to a high official named Hogong, who was said to have been originally of Japan, but was now a councillor of the King of Silla. This man was so impressed with the intelligence and beauty of the young giant Sok Tol Ha that he presented him at court, where he found great favour. He there found opportunity for finishing his education and gradually rose to a high position. The King gave him his daughter to wife, and being old and feeble resigned into his hands the whole management of state affairs. On his deathbed the King appointed Sok Tol Ha to be his successor, over the head of his own son. After the funeral ceremony the son came to Sok Tol Ha and swore allegiance to him as his father's successor, but Sok Tol Ha would not listen to it and insisted upon the son's assuming the crown. For a long time the two contended on this point, each insisting that the other must accept the honour. But finally Sok Tol Ha said: "I have heard that if a man has sixteen-teeth in his upper jaw it is a sign of great wisdom and goodness. Let us find such a man and put him on the throne." The other agreed and search was made for such a man, but all in vain until it was discovered that the King's son himself had sixteen teeth in his upper jaw. Then he could no longer refuse. From that time the title of the Kings of Silla was *I-sa-goom*, which means, "The sixteen toothed;" and that word has been shortened to *Ingoom* which is the Korean word for King to-day.

† Probably near the present town of Song Chun.

‡ There probably never was a kingdom of Kokoria far north of the Pak Tou mountains, as is asserted by Ross and by Griffis.

NEWS FROM CHINA.

FROM Shanghai papers we learn that the U.S.S. *Palos*, while coming up the river on Saturday morning (30th ult.) shortly before 3 o'clock, drifted on top of the *Kiutoan* Light-vessel, and did some damage. The shock was so sudden that the light was put out. Owing to the damage done to the light-vessel, she has been towed up to Shanghai for repairs and has gone into the Old Dock for examination. Her stem is splintered and her bowsprit canted to starboard, the bulwarks on the port side forward are smashed in and on the starboard side they are started. Her ball-pole came down by the run and went overboard, while her lamp chimneys are smashed and her reflectors damaged. The force of the collision snapped her chain, so that she lost her mushroom, and then drifted nearly a mile from her position, before she could be brought up. It was here that she was seen by the *Ichang*. Her place is to be taken meanwhile by a junk. The *Palos*, after colliding with the *Kiutoan*, ran ashore and did not get off till the morning of the 1st. * * * The young sailor of the German gunboat *Wolf* who wrote home to his father the brilliant story of the crew of that vessel's encounter with pirates, which caused so much excitement in Germany, at the Admiralty, the Legation in Peking, etc., has been punished with three days' confinement. * * * The *N. C. Daily News* of 4th June says:—Hardly had Shanghai begun to recover from the shock of the suspension of one of the old-established English houses, than it is shaken again by the news of the suspension of Messrs. Russell & Co., the oldest American firm in China, and almost the oldest of any nationality. There were few firms anywhere with a more extended business than Messrs. Russell and Co., who had branches in New York, Boston, and London, as well as in most of the China ports. They have existed in China 67 years, and the profits they have made have been enormous. No firm has surpassed them in general popularity, or in the best form of public spirit. The growth of this community and the constitution of the Anglo-American settlement in its present form are largely indebted to the labours, freely given, of successive partners in Russell & Co., and the names of Cunningham, Forbes, and others, will be indissolubly connected with the history of Shanghai. The greatest sympathy is felt for the present partners, here and in Hongkong. It will be seen that as a consequence of the suspension of Messrs. Russell & Co., Mr. W. S. Jackson is appointed Underwriter and Acting Secretary of the Yangtsze Insurance Association, Mr. E. U. Smith, Secretary *pro. tem.* of the Pootung Wharf and Godown Co.; while an extraordinary meeting of the shareholders in the latter company is to be held on Monday, the 15th instant, to consider the proposed transfer of its agency to Messrs. Dodwell, Carlill & Co.* * * The P. & O. steamer *Venetia* had rather a bad quarter of an hour of it on the morning of the 3rd instant. She had been towed up from the Old Ningpo Wharf in order to go under Hunt's Wharf shears in Shanghai. A wire hawser had been make fast to her from Hunt's Wharf in order to swing her, but through some cause she forged ahead, the hawser broke, and the steamer went over the Associated Wharves' upper buoy. She then swung round on to the C. M. Central Wharf pontoon, where she hung for some time after her anchors had been let go. Eventually she was taken under the shears. The steamer did not sustain any damage, but as the top of the buoy was only just above water in the afternoon it apparently was damaged.

HYPNOTISM.

THE *St. James's Budget* contains the following, credible by the credulous:—"The New York *Sunday Sun* publishes the following extraordinary story dated from Mier, Mexico, a town of 1,500 inhabitants on the Rio Grande, 150 miles from its mouth:—Ten days ago an individual, who gave the name of Francisco Perez, arrived at Mier, and put up at the chief hotel. At dinner on the second day a waiter removed all the bottles of wine in front of the persons who were dining, and carried them to the table where Perez sat. The angry guests called up the proprietor, in answer to whom the waiter said Perez had ordered him to take the wine. Perez denied that he had told him anything of the kind, and the man was dismissed. During the afternoon of the same day one of the guests presented Perez with a magnificent watch, while a barman gave him a revolver. The next day presents began to pour in upon Perez, among them being a handsome bouquet with the name of a lady attached to it. She explained to her friends that the man in passing her had asked her to send him the flowers. Other persons who had made presents to Perez also stated that they had been asked by him for the articles given, and that they had found it impossible to resist the request. A number of citizens appointed a committee of ten to wait upon Perez, and warn him that he would be killed unless he left the town. Perez was alarmed, and explained that he was a victim of involuntary hypnotism. He said he was twenty-seven years of age, and a native of New Mexico. He had been trained for the priesthood for several years in Rome, and while abroad had practised hypnotism, with which he had made marvellous successes. In consequence of this it had become a passion with him, and he could not resist practising his gift upon those about him. The committee permitted Perez to leave the city, and he has departed for parts unknown."

RUSSELL AND COMPANY.

THE great house of Russell & Co., whose regrettable failure has lately been announced, has a history indissolubly connected with that of foreign trade with China. It dates back to the first quarter of the century, in the days when a few "barbarians," cooped up in their factories at Canton and not allowed to stray beyond, were the forerunners of the present large foreign population of the treaty ports. According to Mr. William D. Hunter (whose books, *Old Canton*, and *Bits of Old China*, are among the most interesting memorials of the old days) the house of Russell & Co. was constituted at Canton on January 1st, 1824, in succession to that of Samuel Russell & Co., which had existed from 1818 to 1823. It then confined itself strictly to agency business. The first partners, from January 1824 to the middle of 1830, were Mr. Russell and Mr. Philip Ammidon. Other partners came from time to time in sailing ships (those were the days when the "latest" news from home was 125 days old when it arrived), among them Mr. Hunter, who was admitted in 1837 and retired in 1842. Mr. R. B. Forbes, who has written a history of the house from its foundation until a period of sixty years later, joined in 1839. In the old days, too, Russell & Co., were intimately associated with Howqua, the famous head of the hong merchants. The very short terms of service of the partners are significant of the rapidity with which profits were then made. Mr. Hunter gives the names of no less then 13 as residing at Canton at some time during the period 1823-1844. The Shanghai branch of the firm was one of the first commercial estsblishments here after the opening of the port to foreign trade in 1843. The house has always figured prominently in the history of the settlement.

Digitized by Google

Sam Qua, the Taotai in the troublous Triad times (1853) took refuge in Messrs. Russell's house, then the American Consulate. The firm was in 1862 instrumental in founding the first great shipping enterprise in which foreigners and Chinese were associated—the Shanghai Steam Navigation Company, whose steamers were purchased in 1877 by the China Merchants' Company. At the beginning of the difficulty with France in 1884 this Company's steamers were transferred to the American flag and placed under the management of Russell & Co., but returned to Chinese custody in the following year. These facts are enough to show the high position occupied by "Kee-chong" for many years.—*N.-C. Daily News.*

### PROFESSOR NAKAMURA MASANAO.

A PROMINENT figure has just passed from the stage of Japan's present history in the person of Professor Nakamura Masanao, who died on the 7th instant at the comparatively early age of 60. The deceased gentleman was one of the finest Chinese scholars of his time. He possessed also a considerable knowledge of English and Dutch, and was well versed in Buddhist and Christian theology. In 1868 he proceeded to England for purposes of study, but returned the following year, and after an interval of residence in Shizuoka, opened a school called the Doninsha, in Kobinata, Tokyo, which at one time promised to become a strong rival of Mr. Fukuzawa's famous institution. Having reached a maximum of 200 boarders and about twice as many day-scholars, the school declined, however, and while still occupying an important place as an educational institution, ceased to be counted among the greatest seminaries of the land. Mr. Nakamura did not confine himself to educational work on his own account. In 1874 he accepted the appointment of Director of the Female Normal College, and in 1881 he became a Professor in the Tokyo University. From this post he was promoted to be a Senator, in 1886, and in 1890 he had the honour of being nominated a life member of the House of Peers, by the Emperor, being at the same time once again re-appointed to the Directorship of the Female Normal College. He received the title of *Hakase* (Doctor) at the time of its creation in 1887. Several works translated by him from English are now standard books in Japan, as for example, "Smiles' Self Help," and Mill on "Liberty." By the general foreign public, however, he will perhaps be best remembered as the author of the inscription on the monument erected by a number of Japanese in 1882 to Richardson's memory, at Namamugi, on the Tokaido:—

"Shed by this sea-shore, the blood of a stranger
Flowed in a fountain of national progress.
Strong clans uprising, the hands of the Emperor
Swayed once again the sceptre of Sovereignty;
And towards reform the mind of the nation
Turning, awoke to the rights of the people.
Who in the homes of the dead or the living
Knows not this brave man? His name shall be written
Wherever the pages of history lie open.
We, on this stone his story recording,
Pray that the thought of the blessings he brought us
May gladden his heart in the land of the Shades."

### MR. J. R. ANGLIN.

THE death of Mr. J. R. Anglin, manager and part proprietor of the *Japan Gazette*, is announced as having taken place at Kowaki-dani on the 8th instant. Mr. Anglin was a self-made man. He came to the East as a soldier in Her Majesty's 20th Regiment, and, purchasing his discharge, entered the printing office of the *Japan Times*, then edited and owned by Mr. Charles Rickerby. When the *Japan Times* passed into the possession of Messrs. Howell and Lay and became the *Japan Mail*, in 1867, Mr. Anglin found employment in the office of the *Japan Gazette*, which journal had just been established. By steady industry and patient application, he gradually rose from the position of foreman in the printing department, to be part proprietor, and in 1885 he managed to acquire the sole title to the journal; a title which the Printing and Publishing Company, established last year, valued at the very liberal figure of fifty-five thousand dollars, paying Mr. Anglin twenty-five thousand for the privilege of sharing the proprietorship with him. Possessing no educational advantages, Mr. Anglin nevertheless succeeded by the sheer force of attention to business and by native shrewdness, in attaining a position of respect and independence. His connection with journalism, begun in a mechanical and concluded in a business character, never extended to the literary department, but, when we consider his training and antecedents, it must be admitted that his influence upon the editorial functions of the *Japan Gazette* was remarkably free from tendencies which might not unreasonably have been expected. In this small community, where every one's life is subjected to the glare of strong scrutiny, he leaves behind him the reputation of a kindly, honest, hard-working, and keen-sighted man of business, who succeeded because he deserved success.

* * *

The remains of Mr. J. R. Anglin were interred on Wednesday forenoon in the General Cemetery. The coffin was carried to the grave by Dr. Wheeler, and Messrs. Lowder, Litchfield, Martin, Schwabe, and Eyton, the deceased's son being chief mourner. A large number of the public were present. Rev. E. C. Irwine read the funeral service, and at the close addressed those present in a few words expressive of the strength of character, resolution, and energy which characterised the deceased, and of the general regret for his loss and sympathy with those left behind, that were felt in the community.

### THE "ALBANY."

THE sequel of the loss of the *Albany* has furnished material for sundry piquant comments by the English papers publishe i in Kobe. One journal relates how the Japanese who bought the wreck at auction subsequently instructed the auctioneer to put it up again for sale, undertaking to pay the difference, a proceeding not particularly heinous in the eyes of every-day folks though denounced by the Hyogo newspaper as a glaring example of Japanese duplicity; the other journal describes a bit of pretty sharp practice on the part of some speculators, who, having been outbid for the steamer, conceived and executed the design of buying the island where she had gone ashore and demanding a big rent for its use by their successful competitors, the possessors of the wreck. This recalls a parallel case that occurred not many years ago at one of the Japanese open ports, which shall be nameless. An extensive scheme of foreshore reclamation was projected by the Local Authorities, primarily for reasons of sanitation, and secondarily for purposes of harbour improvement. One of the foreign Consuls at the port, having, in his official capacity, acquired a knowledge of the details and of the places that would be involved in the operation, purchased a small plot of land with a house, the demolition of which was essential to carrying out the plan. When the Authorities came to purchase the house and land, the price demanded made them pause, and in the end they decided to postpone the whole scheme rather than contribute to the success of such a peculiar manœuvre. So the thing rested there, and the enterprising gentleman had his house and land left upon his hands.

### THE "HABEAS CORPUS" IN JAPAN.

WE are credited, we observe, with having denied the necessity of any such process as a writ of *habeas corpus* in Japan, "since no prisoner can by any possibility be detained in custody for long without being brought to trial." It is strange that any writer, honestly seeking to reproduce our assertions, should so greatly and palpably misstate them. The plain fact, as set forth in these columns, not once but several times, is that the framers of the Japanese Code of Criminal Procedure included in it provisions—as to bail and the limit of time during which a prisoner can be detained in custody without being brought before a magistrate—which, in their opinion, ought to obviate the abuses against which the *habeas corpus* is intended in other countries to provide. That it is perfectly possible to devise provisions of a sufficient character in that sense, no intelligent person doubts, and surprise has consequently been the chief feeling excited by certain well-meaning folks who, regarding only the fact that the process called *habeas corpus* does not exist in Japan, and ignoring the possibility of replacing it by substitutes equally efficient, argue that in the absence of this palladium security of person cannot be counted on. Thus much for the general theory. As to the actual practice in Japan, however, nothing would be farther from the truth than to say that we have denied the possibility of any prisoner being detained long without being brought to final trial. On the contrary, we have several times called attention to the occurrence of such abuses, and have pointed out that, whatever may have been the intention of the framers of the Code, the provisions of the law do not satisfy requirements in this respect. Not a few instances have been noted of men who, before being finally tried, remained in confinement for a length of time not consistent with any sound and just system of procedure. The law provides very distinctly that every prisoner must be brought before a magistrate within twenty-four hours of the time of arrest, and it also provides methods by which release can be obtained on bail. But to be brought before a magistrate does not help a prisoner much if he is remanded time after time, and for some unplained reason—whether because of the severity of the magistrates or the difficulty of finding sureties—the system of bail does not appear to be resorted to freely. There is a decided defect in the law, or in its working. We have frequently pointed this out. During the Diet's session revisions of the Criminal Code and Code of Criminal Procedure were submitted to the Lower House, but did not come up for discussion owing to lack of time. It was hoped then, as we explained, that the point alluded to above would be found amended in the revised Codes, and we trust that the hope will be realized next session. Meanwhile to accuse us of having denied the necessity of reform is to misrepresent us very flagrantly.

### POLITICS AND PARTIES.

A CURIOUS little bit of political analysis is done by the *Yomiuri Shimbun*. Briefly summarized it amounts to this: that in the troublous times of the Diet's session the members standing outside the ranks of the declared opposition included two sections. One of these adopted the view of Viscount Aoki and Count Yamada as to the expediency of putting the new Commercial Code into immediate operation; the other advocated the postponement of the Code. This latter section, to which the *Yomiuri* gives the name of the *Ito-ha* (Count Ito's section), was consequently opposed to the Government in respect of the Code, but on the other hand it supported the Cabinet, and indeed averted a crisis, by its attitude towards the Budget. The *Ito-ha* is now supposed to be closing up its ranks and forming a strong political phalanx, within which the places of Count Yamada and Viscount Aoki will be those of supernumeraries rather than of company-leaders—according to the *Yomiuri*. How much truth there may be in this diagnosis we cannot pretend to judge, but apart from its general significance the statement interests us as bearing upon the attempts made not long ago to prove that Viscount Aoki had deserted Count Yamada in the matter of the Commercial Code, and thus treated his Judicial colleague with considerable disloyalty. The *Yomiuri Shimbun*, which at any rate echoes the opinion of an important political coterie, brackets the names of the two statesmen together, and even to-day writes them down as connected by the very link which one of them was accused of having perfidiously snapped.

### THE "NICHI NICHI SHIMBUN" AND MIXED RESIDENCE.

WE owe an apology to the *Nichi Nichi Shimbun* for having attributed to it sentiments towards which in reality it merely played the part of irresponsible publisher. In a paragraph relating to the condition of Tokyo, the *Nichi Nichi* laid before its readers the views of Professor Inouye, who holds that Japan is not ready

Digitized by Google

for mixed residence, and who adduces the experience of Russian residence in Sagalien in support of his theory. We imagined that the *Nichi Nichi* inserted this opinion in jest, more especially as it was accompanied by an estimate that five centuries must elapse before conditions suited to mixed residence from that point of view could exist in Japan; namely before Tokyo could reach the same architectural and sanitary level as London, Paris, or Berlin. But our contemporary now explains that it merely gave space to the view of Professor Inouye, whose opinion it by no means endorses, having itself been a steady advocate of allowing mixed residence, and being still of the same way of thinking.

### THE CABINET.

THE *Tokyo Shimpo*, which knows eminently well what it talks about in matters of administrative policy or organization, has an interesting paragraph about the relations of "the three Counts" to the present Cabinet. Loving above all things a *bon-mot*, or an epigram, Japanese politicians have given to the Cabinet the appellation of "the drop-curtain Cabinet;" a title the peculiar aptness of which is that the word *Kuro-maku*, which in Japanese signifies drop-curtain, immediately recalls Count Kuroda, who with Count Ito and Count Inouye are supposed to be the powers behind the scene. The *Tokyo Shimpo* puts its statement into the mouth of a Minister of State, who may or may not be an imaginary person, but who certainly avoids all diplomatic circumlocutions in expressing his view. The situation he depicts is that Counts Ito and Kuroda have taken an active part in forming the present Cabinet, the former statesman having given up his position of President of the Upper House and entered the Privy Council entirely for the sake of being able to assist the administration more efficiently. Count Kuroda, equally well disposed, is credited with having induced Viscount Yenomoto to accept the portfolio of Foreign Affairs, and the two statesmen stand ready to advise the Cabinet in respect alike of its choice of officials and its direction of State affairs. Count Yamagata, however, owing to some unfavourable experiences of his own in the matter of receiving advice about administrative business, will refrain from tendering such advice, but will lend his aid in the selection of officials and in preserving harmony. From all this the *Tokyo Shimpo's* Ministerial informant infers that the Matsukata Cabinet is likely to be exceptionally strong and stable.

* * *

Different eyes see things under different aspects. The *Jiyu's* notion of the political situation does not quite tally with the above. It affirms that the "Undecemvirate" of the House of Peers who have been recently organizing attacks upon the Cabinet and urging the Ministers to resign, are puppets moved by the "drop-curtain statesman" Count Ito. The relations between the Cabinet and this "*Kuro-maku-haku*" are bad, just now, says the *Jiyu*, and the source of dissension is the Otsu affair, concerning which the views of the Count and the Cabinet did not tally. Further, the Ministers who lately resigned their portfolios are declared by our radical contemporary to be greatly incensed against Count Ito; so much so that the latter, appreciating the necessity of seeking new allies, is endeavouring to establish a *rapprochement* with the *Issoku-haku*, or "one-legged Count" of Waseda. Thus the *Jiyu*. It would have things so, and so it sees them so.

### THE MARQUIS OF DUFFERIN AT ST. ANDREW'S UNIVERSITY.

THE recent address of the Marquis of Dufferin, delivered on the occasion of his inauguration as Lord Rector of St. Andrew's University, has been the subject of a great deal of comment. Most of the utterances of that genial diplomatist are well worthy of attention, and much wit and wisdom was expected from him in his new capacity. He appeared as the successor of a distinguished line of Rectors. Since 1859 when the office was instituted, its tenure extending over three years, Stirling-Maxwell, Mill, Froude, Stantey, Lord Selborne, and Sir Theodore Martin have worn the robes, and delivered memorable addresses. Lord Dufferin directed his remarks to no one subject in particular, but roamed pretty freely over the whole field of "Advice to Young Men," at least of advice so far as pertains to study. He expressed himself little satisfied with the usual methods pursued in the teaching of Latin and Greek. His real acquaintance with the latter language he dates from a time subsequent to his college days, which left him with but a lame knowledge of that great tongue. Better, he thinks, omit Latin than Greek from a college curriculum. On the whole, we think his remarks under this head will not help the devotees of a classical education. By far the best teaching material, at present, goes into the classical side, which has far more prestige; the modern side, had it better men, would attract more pupils. And now we are told that the classical side must be taken down in the old and put up in the new! The speaker's remarks on the study of French are well worth noting in this country, where German has enjoyed for many years an excessive prestige. Incomparably the most useful foreign language, said Lord Dufferin, for an Englishman to know is French, "for not only is its literature the most diverse and admirable possessed by any European community except our own, but it has long been accepted as the common channel of communication between European nations." One or two valuable hints regarding physical training were thrown out in the course of his remarks. He recommended fencing as an admirable means of giving suppleness and freedom to the joints, and helping the awkward student to more ease, aplomb, and self-confidence in his bearing. The peroration consisted of an appeal to the students to retain their youthful enthusiasm, and preserve through life, the spirit of justice and the sentiment of chivalry. "With knightly purity and white-robed justice for their companions on either hand, the magic light of which Wordsworth speaks in his glorious 'Intimations of Immortality' would never waver nor fade from their path, but would invest all their surroundings, inner thoughts, and the outward sight of earth and heaven with a magical glory and a divine irridescence, showering sunshine and gladness over their most commonplace employments, and illuminating their declining years with unspeakable content."

### FIRE AT NAGASAKI.

THE value of waterworks for the extinction of fire has very quickly been exemplified at Nagasaki. The *Rising Sun* of the 3rd inst. says:—"A fire broke out in Tsuki-machi, in the native town, at 1 a.m. on the 29th ult., but owing to the Water Works water being available by the fire-brigades, it was confined to the vicinity in which it originated and was extinguished by about 3 a.m. Unfortunately the fire spread so radidly at first that two of the occupants of the house, father and son, were unable to effect their escape, and were burnt to death; whilst one of the employés was accidentally shut up in the godown, and was not discovered until the following day, when he was found in a very precarious condition, but eventually recovered. This is the first fire that has occurred since the completion of the Water Works, and although the formal inauguration has not yet taken place, the water is being used throughout the town."

### THE FORMER MINISTER OF FOREIGN AFFAIRS.

IN view of the numerous and varied rumours that have been circulated with reference to the resignation of Viscount Aoki, a representative of the Tokyo News Agency called on the Viscount and asked him for an explanation. The Viscount is said to have replied that rumour credited him with having given to the Russian Minister assurances of the Czarevitch's safety while in Japan, and the public were disposed to assign this as the cause of his resignation, but in point of fact he had given no such assurance. It was true that, a few months ago, the *Tensoku* magazine having published an inflammatory paragraph, a certain foreign official drew the attention of the Foreign Office to it, and asked whether the language used did not suggest the existence of such a feeling of hostility to foreigners as to imperil their safety in Japan. The question had indirect reference to the approaching visit of the Prince Imperial, but its direct import bore only on the general circumstances of foreigners in Japan. The Minister replied that, in his opinion, no grounds of apprehension existed. There might be one or two persons ill-disposed to foreigners, but the great bulk of the Japanese nation were entirely free from such a sentiment. Beyond this no assurance of any kind was given. The Viscount added with truth that no human being could venture to give a guarantee of the nature referred to. The Japanese Minister for Foreign Affairs could only undertake that his Government would employ all reasonable measures of precaution. The Government had done so.

### CARRIAGE ACCIDENTS.

ON MONDAY afternoon while a phaeton was being driven along Main Street the pony bolted at headlong speed. A Japanese who pluckily attempted to stop the horse opposite Langfeldt & Co.'s, was knocked down, but escaped the wheels, and the pony continued its course till near Messrs. Cocking & Co.'s Here it slowed up, doubtless influenced by a Japanese who stood with extended arms in the road, and a lady alighted. The pony, however, again bolted. A foreigner (Mr. S. C. Nash) in an attempt to hold it in, hung on to the bridle for some time, but at length had to let go. A couple of badly damaged jinrikishas, and a demolished pane of glass in the window of Mr. Campbell's premises marked the subsequent course of the pony which was, however, soon quieted and led home.

* * *

We regret to state that Captain Jas. Martin was on Wednesday the victim of a rather serious accident. It seems that in avoiding some jinrikishas his carriage was almost upset and in jumping out Captain Martin broke one of his legs just below the knee. Medical assistance was at once procured, and we learn that the bones have set and the patient is progressing favourably.

### THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 6th inst. were as follow:—

| CONVERTIBLE NOTES. | YEN. | RESERVES AND SECURITIES. | YEN. |
|---|---|---|---|
| Notes issued ..... | 92,908,026 | Gold coin and bullion. | 25,102,043 |
| | | Silver coin and bullion. | 21,355,462 |
| | | Public Loan Bonds ..... | 13,476,450 |
| | | Treasury Bills ..... | — |
| | | Government Bills ..... | 22,000,000 |
| | | Other securities ..... | 2,307,404 |
| | | Commercial Bills ..... | 8,666,667 |
| | 92,908,026 | | 92,908,026 |

Of the above total issue of notes, the sum of *yen* 2,611,737 is in the treasury of the Bank, 22,000,000 has been transferred on loan to the Government, and *yen* 68,296,289 is in actual circulation, the latter showing a decrease of *yen* 771,821 as compared with *yen* 69,068,110 at the end of the previous week.

### THE "JIZEN KAI" JAPANESE FAIR.

THE Japanese Fair promoted by the lady managers of the Yokohama Jizen-kai, which was postponed from Saturday on account of the weather, took place on Monday. The various shows in connection with the fair—the *Cha-no-yu* ceremony, the conjuring, and juggling entertainments, &c.—were patronised by large crowds, and the Bluff Gardens presented a most animated scene during the afternoon. Capital music was rendered by the Band of the *Monocacy*, kindly lent by Admiral Belknap, up till six o'clock, and the fair closed about seven after a most successful run. At the stalls for the sale of fancy articles, considerable sums were realized, and it is certain that the receipts at the gate combined with those taken at the different shows will amount to a very respectable total. Aunt Sally alone, was a large earner of

Digitized by Google

money, being well patronised all through the afternoon. Altogether the affair resulted in success as creditable as it must be gratifying, to the benevolent ladies, both Japanese and foreign, who started it.

### NOTICE TO MARINERS.

THE following Notice to Mariners, relating to the Chao-pei-tsui Lighthouse in the Chefoo District of the China Sea, has been advertised by the Imperial Chinese Maritime Customs:—Notice is hereby given that a Light has been established at Chao-pei-tsui, to mark the east entrance to Wei-hai-wei harbour. The illuminating apparatus is revolving dioptric of the fourth order, showing white flashes at intervals of a minute. The Light is elevated 94 feet above the level of the sea, and in clear weather it should be visible at a distance of 15 nautical miles, except where obscured by the land. The tower is round, of iron, 21 feet high, with a total height from its base to the lantern vane of 35½ feet. The tower and dwellings are white. Approximate position:—Latitude, 37° 27′ 41″ N., Longitude, 122° 15′ 5″ E.

### DR. J. C. HEPBURN.

FRIENDS of Dr. Hepburn will be interested in knowing that the veteran Missionary is engaged in compiling a Bible Dictionary, which is approaching completion. The Doctor is also erecting a very handsome church near the Yokohama station. He purposes placing the edifice at the disposal of the native Church. When these two works of benevolence have been completed Dr. Hepburn contemplates retiring from the field in which he has laboured for 31 years. The aged couple, whose golden wedding was celebrated a short time ago, will thus spend the closing years of their nobly lived lives in the land of their birth.

### THE RADICALS' RECOMMENDATION.

THE Radicals, not content with submitting copies of the Recommendation to the various Ministers of State whom they sought to drive out of office, and to the Cabinet—in the latter case the document was simply returned to them as not legally receivable—caused copies of it to be printed and distributed broadcast. This proceeding, being in direct contravention of the Publishing Regulations, the unfortunate printer, Mr. Furuyama Matasaburo, was summoned, on the 3rd instant, to the Tokyo Local Court, where he is likely to receive a pretty broad hint about the propriety of his conduct.

### POISONING BY PLUMS.

THE *Hochi Shimbun* reports a sad case of death from eating unripe plums. The victims were Kanejiro and Kesa, a boy and a girl, aged respectively seven years ten months and five years three months, the children of Arai Soyemon, a native of Bato-machi, in the Nasu district of Tochigi Prefecture. The two children ate the plums on the 18th of last month and were immediately taken ill. They both expired the following day. Another child, five years old, the grandson of Arai Genroku, also partook of the fruit and became seriously ill, but is now progressing towards recovery.

### THE VICE-MINISTER OF JUSTICE.

THE *Official Gazette* announces that Mr. Miyoshi Taizo has been appointed Vice-Minister of State for Justice. Mr. Miyoshi served in the post to which he is now re-appointed from May, 1885, to the close of 1887; when he was named a Judge of the Court of Appeal and afterwards of the Court of Cassation. In 1890 he became Chief Public Procurator, which position he filled up to the time of his return to the Administration. He is a native of Hiuga, Miyazaki Prefecture.

### A HERO IN TROUBLE.

MUKOBATA JISABURO, one of the two jinrikshamen who distinguished themselves in connection with the Otsu affair, seems to have attracted the attention of the police by some eccentricity of behaviour, if a telegram to the *Kokkai* from Kyoto is to be believed. With a companion and two girls he put up at a hotel in Idemachi, and there indulged in the freak of writing the name Unemoto Kyuichi in the register book. For this the authorities have instituted a prosecution against him.

### GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 6th inst., as derived from the returns of the Bank of Japan and the Yokohama Special Bank:—

| Day | Gold Coin. (Per *yen* 100) Siver Yen. | | Found Sterling (Per £1) Siver Yen. |
|---|---|---|---|
| 1st | 127.800 | A.M. P.M. | 6.2950 |
| 2nd | 127.800 | A.M. P.M. | 6.2950 |
| 3rd | 127.800 | A.M. P.M. | 6 2950 |
| 4th | 127.800 | A.M. P.M. | 6.2745 |
| 5th | 127.200 | A.M. P.M. | 6.2540 |
| 6th | 127.000 | A.M. P.M. | 6.2337 |
| Averages | 127.567 | | 6.2745 |

The above averages show for gold coin a decrease in value of *yen* 0.493 per cent., and for the pound sterling a decrease in value of *yen* 0.0378 as compared with the previous week.

### A NEW VERSION.

THE *Hongkong Daily Press* says:—"An explanation of the conduct of Tsuda Sanzo in attacking the Czarevitch has reached us which we have not seen in any of the Japan papers. It is said that he had at some time rendered a service to a Russian man-of-war, for which he had been rewarded by the commander with a small decoration in the shape of a medal. On the occasion of the Czarevitch's visit he wore this decoration, and expected that His Imperial Highness in passing would have honoured him with some notice. In this he was disappointed, but he contrived to have himself posted a second time in such a position that the Czarevitch would pass him. Again His Imperial Highness failed to observe him, and Tsuda, in an access of rage induced by wounded vanity, dashed at him with his sword intending to kill him on the spot. The tale has an air of verisimilitude, but we are not in a position to vouch for its truth." Probably not!

### THE FIRE IN SHINSHU.

THE fire which occurred in Nagano-machi, province of Shinshu, at 11 o'clock in the night of the 2nd instant, proved very destructive. It swept along the streets called Nishi-no-mon, Sakuraye, Motozen, Honendo, Higashi-no-mon, Ise and Higashi-zaka, consuming 245 houses, the children's school, the village shrine, the temple of Zenko, the Nio-mon, the temple of Daihangan and the theatre. Not until 3 o'clock the following morning was it extinguished.

### THE KEISHIN CLUB.

THERE has been formed in Tokyo a Club the membership of which indicates its importance, since it includes such names as those of Messrs. Shibusawa, Masuda, Sonoda, Seki, Taguchi, and so forth. These gentlemen, we learn, are to hold a meeting to-day for the purpose of preparing a petition for the total abolition of export duties. Mr. Furuichi, an eminent engineer of the Home Department, is to deliver a lecture on the subject of the Tokyo harbour.

### VESSELS PASSED ANJER.

THE following vessels, bound to Japan, have passed Anjer:—*Baring Brothers* (American), Captain Murphy, from New York to Yokohama, on May 6th; *Senator* (British), Captain Ellis, from Philadelphia to Hyogo, on May 14th; *Melanope* (British), Captain Tait, from New York to Yokohama, on May 15th; *Santa Clara* (American), Captain Fuller, from New York to Japan, on May 17th.

### THE "TAKACHIHO MARU."

THE N. Y. K. steamer *Gembu Maru* arrived from Tsushima yesterday, says the *Rising Sun* of the 3rd instant, with cargo, etc., salved from the *Takachiho Maru*. Notwithstanding having experienced some bad weather since she stranded, we believe very sanguine hopes are entertained of being able to get her afloat again in a few days.

### THE NEW STEAMER "EMPRESS OF JAPAN."

WE are informed by the Agents of the Canadian Pacific Railway Steamships, that the *Empress of Japan*, which arrived here on Wednesday, made the run from Kobe to Yokohama in 21 hours.

### THE CZAREVITCH.

WE read in the *Jiji Shimpo* that the Czarevitch has forwarded to the Tokyo Charity Hospital, through the Russian Legation in Tokyo, a sum of one thousand *yen*, by way of donation.

### THE NEW FRENCH ADMIRAL.

REAR-ADMIRAL PARRAYON, formerly flag-captain to Admiral Courbet, has been appointed to the command of the French Squadron in these waters.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The attention of the metropolitan journalists during the present week has been divided between the Otsu affair, the propriety of the Radical advice to the Ministers of State to resign, the great American Exposition of 1893, the situation after the recent changes in the Cabinet, and various other questions of more or less importance. According to some papers the Matsukata Cabinet is still surrounded by elements of uncertainty; but the general impression seems to be that, after its recent reconstruction, the Ministry has settled down into a state of stability for the present at least. The public, so far as we can judge from what has appeared in the press, does not expect any noteworthy change in either the domestic or the foreign policy of the Government, with the single exception of the question of Treaty Revision. As to this, the papers seem to take it for granted that Count Matsukata has decided to suspend the negotiations. For the rest whether the Cabinet will prove durable and strong, depends, in the opinion of the native press, upon the continuance or discontinuance of the present good relations between Count Matsukata and Count Ito. Some papers, the *Hochi Shimbun* among the rest, frankly express their apprehension that these two statesmen may come to regard each other with feelings quite opposite to those now entertained by them. The former, these papers fear, may resent the interference of the latter, while the latter may complain of the inactivity of the former.

* * *

Count Ito is now the focus of political attention. All the papers unite in recommending him to openly assume the supreme direction of the affairs of the State. The *Jiji Shimpo* says that he must be admitted to be the most popular actor on the political stage at the present moment. The secret of political success consists in making a timely use of one's popularity. Our contemporary therefore thinks that now is the time for Count Ito to become the chief of the Cabinet, not only in act but in name. He may be waiting for a future opportunity, but who can say that his popularity will not soon pass away, if he continues to be a Minister behind the curtain, and who can tell whether the occasion thus lost will ever present itself again? The *Jiji* illustrates its meaning by referring to the case of the late Saigo. He was able to exercise a powerful fascination over the minds of the people at the time of his rebellion, because he had chosen his time well. If he had waited a few years, his time for action would have gone, never to return. Now or never is, in effect, what the *Jiji* says to Count Ito.

* * *

The comments of the vernacular press upon the Otsu affair have been reproduced at length, and it will be enough to state here that the objections at first raised against the propriety of Tsuda's case being tried by the Court of Cassation, are gradually giving place to acquiescence

Digitized by Google

in the wisdom and legality of that course. We may also note that the *Mainichi Shimbun* speaks highly of the friendship shown by Russia towards Japan, and advises its countrymen to repay Russia's kindness by increased intimacy; the *Hochi Shimbun* recommends the people and the Government to make no more fuss about the regrettable incident, but to turn their attention to other topics of vital importance connected with national affairs both at home and abroad; and the *Chiusei Nippo* strongly refutes the objections which have been made against the manner of trying Tsuda's case.

* * *

With regard to the movement of the Radicals and a section of the Conservatives in advising the Cabinet Ministers to resign in a body, we reproduced in our last weekly summary the comments of various papers, which are unanimous in disapproving the action of the agitators and the Conservatives. Now, therefore, it only remains to refer to what the Radical organ, the *Jiyu*, and the Conservative organ, the *Chiusei Nippo*, say in defence of the unpopular movement. The *Jiyu*, after referring to the unfavourable comments evoked by the action of its Party, observes the Radicals have no desire to get into power so long as the administration is carried on according to liberal principles, but that the practice of liberal principles can only be expected from a party professing such principles. The principal function of the *Jiyu-to* before the promulgation of the Constitution was of an educational nature, but its mission now is to carry into practice the reforms it has advocated, and for this purpose the essential preliminary is to get into power. Hence it may be inferred that the Radicals really meant to assume the responsibility of office, had the Ministers accepted their advice. But a few lines further on, we are told that the real object of the Radical party in offering such counsel to those in power, was, not to replace them in office, but simply to induce them to candidly consider their situation, and discharge their responsibility to the Sovereign as well as to the people.

* * *

In another article published a few days after the one just quoted, the Radical organ burst into an indignant protest against the charges of violence and recklessness commonly preferred against the members of its party. It does not state that these charges are untrue, but it refers in an exulting manner to the conduct of the men who opposed the Tokugawa Government and finally overturned it. Were they not also reviled as being violent and reckless? The critics who hurled such offensive epithets at the heads of these heroic men, had forgotten the tyranny and corruption against which their energetic conduct was a natural reaction. The Radical paper does not state that the present Government is open to the same charges, but it affirms that some politicians are doing all they can to fan into life once more the dying fire of despotism, and that these are the people who try to injure the cause of liberty by calling the Radicals bad names. Such benighted persons, says the *Jiyu*, cannot discern the direction in which the current of events is tending.

* * *

The Conservative organ, the *Chiusei Nippo*, has two articles, written with the object of defending the conduct of those Conservatives who recently joined, though not directly, in advising the Ministers of State to resign in a body. Our contemporary is of opinion that the members of the Cabinet are not directly responsible to the people, yet that, whenever they fail to discharge their duties, the people are justified in expressing a wish that they should resign their posts. What is required is that such advice should be given in a conscientious spirit, and only when the Ministers are really culpable. Referring to the Otsu affair, the *Chiusei* remarks that "the measures taken by the Government about this affair are open to blame." Whether their error is of a nature to require their resignation, the *Chiusei* does not undertake to decide, but it observes that, if the error was deemed grave enough to necessitate the sacrifice of one or two of the Ministers, the Cabinet ought to have resigned in a body. For on any great national question the Cabinet Ministers must necessarily acknowledge joint responsibility.

* * *

The growing strength of the moderate or, as some papers delight to call it, the Government party, seems to cause no small anxiety to the Extremists. The *Kokumin Shimbun* observes that the Government party is steadily encroaching upon localities hitherto considered to be under the control of the progressive parties. Upon the whole, the Government party has now assumed an attitude of aggression, while the progressive parties are on the defensive. The *Kokumin* recommends the Extremists to muster their forces, and not only to drive the foe out of their territory, but also to carry the war into the heart of the enemy's country.

* * *

There is a wide-spread rumour that General Nagayama will be released from the post of Chief of the Hokkaido Administration Board, and that his successor will be either Mr. Narabara, President of the Japan Railway Company, Mr. Morioka, President of the Nippon Yusen Kaisha, or Baron Takasaki, formerly Governor of Tokyo. It is also stated that Count Kuroda is desirous of having Mr. Suzuki, Governor of Akita, appointed to the post. The *Nichi Nichi Shimbun* does not pretend to know the reason why there should be any change in the occupant of the position, but opines that the difficulty with the Sugar Manufacturing Company may have something to do with the matter. General Nagayama enjoys the enviable reputation of being the organizer and commander of that excellent body of soldiers, the colonial militia. As Chief of the Hokkaido Administration Board, which part he united, a few years ago, to the Command of the Colonial Militia, he has been known to be assiduously devoted to the development of the resources of the northern island. But frankly speaking, the *Nichi Nichi* thinks that he is too honest to be proof against the arts of cunning folks. It recommends the Cabinet to appoint to the difficult post a man of exceptional capacity for business and organization. Hundreds of millions have been spent upon the development of the island, but things, complains the *Nichi Nichi*, remain much the same as ever. The Government is open to the charge of setting age and past career above the higher claims of ability and accomplishments. It is advised to make an exception in the case of the position under discussion.

* * *

The *Kokumin Shimbun*, writing on the same subject, accuses the Government of hitherto choosing for the important post whatever man may be most serviceable to a littte band of individuals who monopolize all the profitable commerce and enterprises in the island. If things be allowed to continue in the present condition, Hokkaido, the Tokyo paper fears, will become another Ireland, the springs of its large wealth entirely monopolized by a race of adventurers and swindlers. The *Kokumin*, therefore, thinks it vitally important for the interest not only of Hokkaido but of the country at large, to appoint a man of unswerving righteousness to the post of Chief of the Hokkaido Administration Board. Are men, asks the Tokyo paper, like Mr. Narabara and Baron Takasaki specially fitted for such a post?

* * *

The promulgation of the Organization of the Temporary Bureau for the conduct of business connected with the World' Columbian Exposition, and of the Regulations about the sending of exhibits to the fair, has furnished to the Tokyo papers an opportunity to call the attention of Japanese merchants and manufacturers to the importance of the exhibition as a means of developing Japan's foreign trade. The *Mainichi Shimbun* speaks of a peculiar historical interest which the Chicago Exposition possesses for Japanese. The supposition that the object of Columbus in sailing to the west was to reach Japan, which had been reported by Marco Polo to be full of gold and precious stones, though not established, is credible. Thus the memory of the discovery of the American continent by Columbus cannot but have great interest for the Japanese nation. This interest is heightened by the recollection of what the great Republic beyond the sea has done for Japan in modern times. The Tokyo journal calls upon its countrymen to bear the circumstances in mind, and to spare no pains to make good use of the rare opportunity which the Exposition affords for extending Japan's tradal relations with the world in general and with the United States in particular.

* * *

The *Yomiuri Shimbun* also refers to the importance of American custom in disposing of Japanese produce and manufactures. One-third of the total exports of the country are purchased by the trans-Pacific Republic. Hitherto Japanese merchants and manufacturers have been accustomed to entrust their exhibits to Government officials or to companies, and have not shown any curiosity to pay personal visits to foreign Exhibitions. They are entreated to divest themselves of their indifference, and go over to Chicago in person, to better study the requirements of foreign customers.

* * *

In the person of Professor Nakamura Masanao, Japan has lost one of her greatest benefactors of modern times. All the papers, without distinction of party in principle, unite in paying warm tributes to the memory of the departed scholar and moralist. The *Yomiuri Shimbun* observes that Professor Nakamura, in common with Mr. Fukuzawa, rendered inestimable services to his country in educational affairs. It asserts that a majority of the useful men now in active life are indebted, directly or indirectly, to the educational influence of one or other of these two men. In character and temperament, the two were quite unlike. Mr. Fukuzawa is a Kumagawa Banzan, while the late Professor Nakamura was a Nakae Tôju. Mr. Fukuzawa is pre-eminently distinguished for practical common-sense, while Professor Nakamura was conspicuous for his influence in the sphere of morals. Indeed, his services as a moral teacher were equal, if not superior, to the services rendered to the cause of Western civilization in Japan by Mr. Fukuzawa who, with Voltairian wit and penetration, waged a courageous war against the evil customs and notions bequeathed by feudalism and by the Chinese philosophy. If Nakae Tôju may be called the sage of Omi, and the late Rev. Mr. Nishima the sage of Kyoto, then surely Professor Nakamura may with equal propriety be called the sage of Koishikawa. The *Nichi Nichi Shimbun* admires him not on account of either his erudition, his literary ability, or his political services, great as is his claim to celebrity in these respects, but on account of his virtues. Whatever he taught his desciples, he was the first to illustrate by action. "The country has lost by his death a moral standard of perfect beauty." The editor of the *Jiyu*, Mr. Kurihara, also publishes in his paper a touching essay on the character and work of his whilom master. For some years he studied at Professor Nakamura's school in Koishikawa, Tokyo, but in 1877 he left the school and went to Kochi, where he first made the acquaintance of Count Itagaki. He recalls the fatherly love with which Professor Nakamura led his pupils into the path of virtue. Professor Nakamura's services to his country, we read, are not confined to education; that he did much towards introducing sound ideas of constitutional government is amply proved by his writings. The author substantiates this assertion by quoting passages from essays written in the first year of Meiji, just after Professor Nakamura's return from England. While in England he became deeply impressed with the idea that the only true basis of good government lies in the spirit of self-help possessed by individual members of a community. Therefore, on his return, he translated Smiles' "Self Help" simultaneously with Mill's essay on Liberty. Mr. Kurihara thus regards his late master as in a manner one of the originators of the liberal movement of which he himself is now an active and promising representative.

## *A PLEA FOR JAPAN'S TREASURES.*

SO much has already been written in this journal with reference to the subject of Mr. RALPH CURTIS' letter—published in our correspondence columns—that we almost hesitate to approach the question again. Yet it would seem from what Mr. CURTIS says that despite frequent discussion and representation in the past, no effective steps have yet been taken to preserve from decay the art treasures that still happily remain to Japan, though in sadly diminished numbers. Countless objects of the greatest beauty and inestimable value have passed into the hands of foreign virtuosi, and are destined henceforth to lie comparatively hidden in private museums, or to repose in cabinets side by side with curiosities from the huts of African savages and Polynesian cannibals. But Japan still retains enough to amply illustrate the genius of her old time artists and art artizans, and it is pitiable to think that she does not yet appreciate the imperative duty of carefully conserving the precious residuum. Western collectors, whose keen desire to obtain possession of a beautiful and rare object, impels them to offer prices that seem a small fortune to less enthusiastic persons, could not fail to carry off much that Japan did not understand the advantage of keeping. Money, after all, is the arbiter of the situation. It cannot be supposed that, from a purely artistic point of view, Americans see greater beauties in the porcelains of China and the lacquers of Japan than do French or English virtuosi; yet owing simply to the fact that longer purses are to be found in New York for this particular purpose than in Paris or London, the treasures of Japan and China take their way across the Pacific rather than across the Atlantic. Yet in one field the foreign dollar has not proved omnipotent. Many people imagine that the prices ruling in Western curio markets have no parallel in Japan. That is a mistake. For certain objects, as special varieties of ancient Chinese *céladon* or *Chien-yao,* genuine examples of old Korean or Japanese pottery and faience, and other things hallowed by the worship of the Tea Clubs, sums used formerly to be paid, and are still paid, that will bear comparison with almost any Western figures. But unfortunately these so highly esteemed specimens owe their value chiefly to associations quite unconnected with art, or to eccentric canons not recognised anywhere outside Japan. Objects which command universal admiration abroad used generally to be regarded here as ordinary chattels or household utensils, and were consequently easily obtainable by foreigners in whose eyes their novel beauties possessed a pecuniary value hitherto unimagined by the Japanese. It is a singular but well authenticated fact that a traveller coming to Japan now cannot hope to see any such collections of Japanese art treasures as may be witnessed at all times in London, Paris, or New York. To such an extent has the country been depleted. Yet, as we have said above, an invaluable residuum still exists in the temples, and the authorities are understood to be revolving measures for bringing these exquisite heirlooms together, and placing them in museums where they can be safely preserved, to sustain Japan's reputation and to educate her people. In the meanwhile, however, "moth and rust" carry on their work of corruption, and if thieves do not break in and steal, their manners have greatly improved of late years. How, we wonder, does it impress the Japanese to learn that to foreign generosity and love of art is due apparently the only effort hitherto made to mount and preserve the beautiful pictures of which Mr. CURTIS speaks. One imagines that among wealthy Japanese, whether noblemen or ordinary gentlemen, there should be some whose patriotism, to say nothing of their artistic instincts, ought to move them to contribute handsomely for the preservation of objects which can never be replaced, and which, when brought together and properly displayed, will exercise a sensible effect on Occidental esteem for Japan. But the truth is, we strongly suspect, that the Japanese themselves pay less attention to these exquisite heir-looms and perhaps find less easy access to them, than do foreign tourists. The Government, however, cannot do everything. The officials of the Imperial Museum, under the intelligent and energetic direction of Mr. KUKI, have accomplished much, and are working steadily though slowly towards the end indicated above. But private persons do not come forward to assist them. A foreigner like Dr. BIGELOW, observing how the treasures kept in the temples are suffering from the inevitable neglect of their custodians, who are wholly without means, even supposing they have the will, to undertake any effective work of repair or preservation, does not hesitate to lay the art world under an obligation by paying for the backing and re-mounting of a few special master-pieces. Surely it should humiliate the Japanese to reflect not only that a stranger has set them this example, but also that they have failed to profit by it. Curiously enough, the criticism of Mr. CURTIS follows close on the heels of a similar recommendation by Dr. ERNEST HART, the well known English amateur of Oriental Art, who in an interview published last month in these columns, called attention strongly to the irreparable injuries which countless objects of beauty in Japan are suffering from the want of a little organized care and liberality. We do not hesitate to speak strongly on this subject, for the Japanese will recognise that our remarks are not dictated by any spirit of faultfinding, but by a sincere desire to preserve for the national benefit and reputation heirlooms which any Western country fortunate enough to possess them, would deem it a sacrilege to treat as Japan treats them.

## *THE CHICAGO EXHIBITION.*

IT will be seen from the Ordinance published elsewhere that Japan has now definitely set about organizing preparations for the Great World's Fair. When both Houses of the Diet made a representation to the Government urging the advisability of a special appropriation, and when it was rumoured that the sum contemplated was at least half a million *yen*, many people entertained grave doubts whether the outcome of the scheme would justify this expenditure. Reduced to mere arithmetic, the prospect is certainly not encouraging. To realize a profit of five hundred thousand *yen*, goods to the extent of at least three million *yen* must be sold; and if to the sum appropriated by the Government, we add the cost of transport and travel, it becomes evident that unless the sales in the Japanese section are on a very large scale —a scale without any precedent in the case of previous Exhibitions—the immediate loss to the country must be considerable. But the question is not one simply of direct loss or gain. The Diet and the Administration, in making this appropriation—which, we may note, remains still to be actually made—are doubtless influenced by solicitude for the development of the empire's art industries and the extension of their field of popularity abroad. With such objects in view, the expenditure of even a large sum of public money would not be unwise or extravagant, and we should consequently be dealing with a partial issue did we confine ourselves to figures connected with the direct results of the Exhibition. Assuming, then, that the primary purpose of the Authorities is to permanently extend the market for Japanese productions, and their secondary object to exercise such wise direction as shall secure this end for a minimum outlay, it becomes evident that the vitally important point to be taken into consideration is the nature of the exhibits forwarded to Chicago. We can scarcely write too strongly about this matter. In no single instance, whether of a domestic or a foreign exhibition, has Japanese art industry been exercised so as to attain the dual propose of winning Occidental favour and securing ready sales. The experience of last year's Industrial Exhibition is fresh in the memory of all. A very large majority of the articles in the Fine Arts Section were utterly unsuited to the needs, and unlikely to captivate the fancy, of foreign visitors. It is true that the Exhibition was not intended solely or even chiefly for foreigners. Japanese custom was of more importance to the exhibitors. But every student of this subject knows that even when he seeks foreign patronage the Japanese art artizan cannot do better than follow the canons of his own country. To manufacture articles expressly for domestic use and offer them

Digitized by Google

in foreign markets, would, of course, be plainly unwise. But that is a question apart from artistic standards, and these, we repeat, the Japanese is nearly always safe in accepting as they have been handed down to him in the traditions of his own great schools. Where he goes wrong, too often hopelessly wrong, is in attempting to give practical expression to his conception of Occidental taste. The result is that he produces a multitude of articles which are neither true to Japanese canons nor suited to foreign requirements and fancies. For these he finds no market, and the loss thus incurred utterly swamps the profit accruing from the comparatively small minority of specimens that find ready and liberal purchasers. It is really surprising to observe how exceedingly ill-directed much of Japan's modern art effort is. Even in the case of exceedingly costly productions like the cloisonless enamels of Tokyo and Nagoya, the embrodieries of Kyoto, the richly decorated porcelain and faience of Kaga, Owari, and Arita, and so forth, nothing like adequate care is exercised to provide that the expenditure of so much labour and material shall not be rendered entirely fruitless by want of intelligent, or perhaps we should rather say experienced, direction. This it is that paralyses Japanese art industry. Year in and year out there remain in the hands of enterprising but uninstructed artizans or capitalists quantities of objects that can be disposed of only at a heavy sacrifice. To provide against such a contingency will be the first care of the Bureau now organized. If the Japanese Court at Chicago is furnished with exhibits of the character displayed in Paris three years ago or in Uyeno Park last year, not alone will Japan's reputation suffer, but the loss entailed will be of a crippling character. Very fortunately for the country the official gazetted to the control of the Bureau is a man of the highest intelligence, thoroughly competent to grasp the business phases as well as the national aspects of the problem. Mr. Mutsu, doubtless, needs no reminder of the paramount importance of helping the artizans with hints and suggestions at the earliest possible moment, and of subjecting their work throughout to such direction and inspection as may secure it against becoming a source of loss to themselves and discredit to their country. A delicate point of management may be involved in controlling the efforts of artists and artizans without incurring any direct responsibility towards them. But that is a matter of detail. What the Bureau has to remember is that every attempt hitherto made to direct effort into sound and sucessful channels, and to divert it from routes leading only to fiascos, has been lamentably insufficient. If the men who intend to send exhibits to Chicago—assuredly a large number of persons since the Diet and the Administration exhibit such vigorous interest in pushing the affair—if these men are abandoned to their own devices, and if they receive no assistance more intelligent and energetic than has been the case in the past, Japan will have to suffer heavy loss in the present, and at the same time will forfeit the opportunity offered by the Columbian World's Fair to extend her markets and her reputation.

## *CHOLERA INSPECTION.*

THE Government has issued a Notification that Bangkok and Malacca shall be regarded as places infected with cholera, and that all ships coming thence, directly or indirectly, shall be subjected to medical inspection on arrival in Japan. The appearance of a Notification of this nature—and unfortunately there have been only too many instances—always suggests a speculation as to the degree of security afforded by such measures. It is, of course, necessary that precautions should be taken in respect of places where the plague has actually established a footing, but every one conversant with the story of cholera epidemics in Japan has learned to suspect that China is the great source of danger. At Hongkong alone among all the Chinese ports does there exist a system enabling the public to acquire certain knowledge of the sanitary condition of the place. Elsewhere cholera may be raging among the native population without any intelligence of the fact reaching the ears of the outer world, and while Japan has hitherto closed her doors against the uninspected ingress of vessels coming from places the condition of which, owing to their civilized administration, is known, she has left them open to vessels coming from Shanghai, and perhaps bringing with them the germs of the terrible disease. Scarcely a year passes we believe, without an outbreak of cholera, more or less severe, among the native population of Shanghai, but except in the very improbable event of that place being declared an infected port, no precautions have been taken up to the present against ships arriving from it. Exclusive of vessels flying the Japanese flag, the tonnage of steamers entering Nagasaki last year was 326,415. None of these ships are required to show a clean bill of health before coming into port and opening communication with the shore. In all other countries such a precaution is deemed necessary, and rigorous measures of exercising it are in force. But Japan has always been a notable exception. It is not to be presumed that she considers herself blessed by providence with some special immunity from disease, or that she relies implicitly on the perfection of her big neighbour's sanitary systems. The explanation is that, being deprived of autonomy under the present Treaties, she has to negotiate, instead of enacting, any laws affecting foreigners within her territories, and her Government has probably hesitated to repeat the experience already garnered in the matter of negotiation. We know how it fared with the question of harbour control at Yokohama—how, although regulations were carefully drawn up and submitted to the Foreign Representatives more than ten years ago, they still await endorsement, and the harbour is still treated as a place where ship-masters may do just as they please. We know, too, that when there was question of a municipal government for Yokohama, Sir HARRY PARKES gave it as his opinion that a period of ten years at least would be required to secure the effective cöoperation of the various foreign Powers, however desirous he himself might be of promoting the project. From steps involving such an expenditure of time and not necessarily successful labour any Administration might well shrink. But this is ancient history when considered by the light of the incomparably more liberal and courteous treatment accorded to Japan to-day by Western States. Among the Representatives of the Great Powers now in Tokyo it may confidently be stated that there is not one who would think of placing obstacles in the path of sanitary precautions, or hesitate to cöoperate as heartily as possible in organizing any preventive measures Japan might deem necessary. Still the fact remains that she is not competent to take these steps independently. The good will of the Foreign Ministers makes the practical situation much easier than it might be, but cannot alter the reality. An interesting crisis would be created should the Diet, awaking to the danger that Japan incurs by exposing herself to the free ingress of epidemics from the huge, uncleanly, over-populated, and disease-stricken empire by her side, enact laws requiring that every ship entering Japanese ports from a foreign country should submit her bill of health for inspection by the port officials, as ships are required to do in every Western State. The Japanese Administration would then find itself in the curious predicament of having to negotiate with Foreign Powers before putting into operation a law enacted by the Japanese Diet for the purpose of protecting the Japanese nation against plague and pestilence. It has been well said that constitutional institutions are quite incompatible with the preservation of the extraterritorial system. The conflict between the two is sure to come sooner or later.

## *TEMPERATURE AND CRIME.*

IT is reported that the Chaplain of Wandsworth Prison has made out a connection between temperature and crime. As the thermometer rises the prisons fill; as it falls the prisons empty. This being so, it is a natural inference that heat favours vice, while cold fortifies virtue. The idea is suggestive, and fits in very well with some of our most ordinary phrases. "Hot" is a synonym for "angry;" and the hot-

Digitized by Google

blooded races belong to southern climes. Children get fretful when the weather gets warm; and grown-ups, too, pretty frequently become unhinged when a sudden rise of temperature occurs. Statistics tend to show that there are more murders per head in tropical than in temperate countries. The very word temperate itself corroborates the Chaplain's theory. We have seen very instructive charts showing at a glance how particular diseases march with the seasons. Some reach an epidemic maximum in spring, others in summer, others again in winter. Earthquakes, too, we have long known to have their own seasonal law of frequency. Ultimately it is all the sun's doing; and to the list of physical, physiological, pathological, and all other recognised effects of solar heat we now add the psychological, as shown by the annual see-saw of vice and virtue. Step by step, science seems to be doing her best to eliminate individual responsibility from the ethical creeds of man. First insanity is found to cover a multitude of sins; then temporary insanity is discovered as a convenient counterpoise in the balance of justice. Next a morbid sentimentality urges drunkenness as a sufficient excuse for wife kicking. And if a criminal cannot be proved to have been temporarily insane or drunk, some busybody unearths a near relative who was once believed to be a little crazy. Then heredity steps in to explain why a man cannot possibly help being wicked. Even if heredity should fail, there is no difficulty in making out that the influences which moulded the youthful character of the man were very bad, but were not of his seeking. He was not to blame, poor fellow! And now we fear the good Chaplain of Wandsworth has given a new weapon into the hands of those sentimental paradoxers who, if logical, would have us believe that a man, be he good or bad, or indifferently neither, is always what he cannot help being. It may be that, in the next century, the penalty for a crime will depend upon the temperature at the place and at the time of commission. The meteorologist will become as indispensable a witness in all criminal trials as the chemist now is in a poisoning case, or the expert in a forgery case. The burglar will study his thermometer carefully ere he issues forth on his deeds of darkness, knowing that, if the deed should fail, a difference of half a degree may change a life sentence into a seven years' servitude. ADAM very early discovered how natural it was to try and shift the blame to other shoulders. It was very mean, of course; but meaner far it seems to us is the modern tendency to blame our ancestors, or our environments, or the very temperature of the air we breathe. For to none of these can right of reply be granted.

## *AN INTERESTING SUIT.*

A LAWSUIT involving an interesting issue was recently brought by the people of Nagano Prefecture against Mr. UTSUMI TADAKATSU, then Governor of that district. The plaintiffs alleged that the Governor had taken possession of certain forest land over which they claimed to have rights such as would be cognizable by an ordinary Court of Law, and they accordingly brought their suit in such a Court. The Governor, however, pleaded that as the act complained of had been done in his official capacity, it could not be adjudicated by an ordinary tribunal, and the jurisdiction of the Court thus became the first question to be decided. Now the 60th Article of the Constitution provides that "All matters falling within the competency of a special court shall be specially provided for by law;" and the 61st Article says, "No suit at law which relates to rights alleged to have been infringed by illegal measures of the Administrative Authorities, and which shall come within the competency of the Court of Administrative Litigation specially established by law, shall be taken cognizance of by a Court of Law." From these provisions it is clear that matters cognizable by the Administrative Court must be specially defined by law, and they are accordingly so defined by Law No. 106 of 1890. Alleged illegalities committed by administrative officials, other than acts thus specially brought within the purview of the Administrative Court, ought to be cognizable by a Court of Law, and no reason is apparent why a Governor, in his official capacity, may not be sued in such a Court with reference to matters affecting private rights, for if the enabling legislation of the Administrative Court does not extend to such cases, while at the same time they lie outside the jurisdiction of an Ordinary Court on account of their official character, then obviously there is room for grave denials of justice. Counsel for the plaintiffs argued in this sense, and the Court admitted the soundness of the plea. But the defendant carried the question to the Supreme Court, and the decision of the latter was awaited with much interest. The Supreme Court, in considering the matter, referred to the 24th Article of the Constitution, which declares that "No Japanese subject shall be deprived of the right of being tried by the judges determined by law." Looking at the spirit of this article, the Court concluded that every question affecting the rights of a Japanese subject, must be cognizable by some legal tribunal, and that, consequently, if the Administrative Court could not exercise jurisdiction, then the matter must necessarily fall within the competence of an ordinary tribunal. The fact that the act constituting the subject of dispute was performed by an official in the exercise of his administrative functions, did not, in the opinion of the Supreme Court, exclude it from the purview of an ordinary Court of Law. Our readers will doubtless agree that the judgment of the Supreme Court in this instance has been only natural, and such as might have been expected. But the decision is worth recording as an important step in the progress of the Japanese Judiciary. In England a Court of Administrative Litigation does not exist. Courts of Law there take cognizance of all matters not specially reserved by considerations of public policy. From the point of view of general judicial principles, the jurisdiction of an Administrative Court is special: no presumption exists of extensive jurisdiction in its favour unless the law explicitly confers such jurisdiction. Ordinary tribunals should take cognizance of all matters falling within the scope of ordinary law. To uphold the dignity of the Law Courts and to extend their jurisdiction as far as possible, should be the aim of the Judicature in all countries. The degree of development attained in these respects indicates the progress of the judicial system of a nation. In Japan the Courts of Law are making a steady and satisfactory advance, though to us, accustomed to the reverence, nay almost worship, given to Judges in Great Britain, the condition of the Japanese Judiciary seems to lag far behind the development of the State in other directions. The decision above referred to appreciably enhances the importance and dignity of the Law Courts, and affords matter for congratulation to the nation at large. The independence and irresponsibility attaching to officialdom in feudal times, have not entirely disappeared under the new regimen, and it is distinctly satisfactory to find that the highest legal tribunal in the land declines to invest the acts of officials with any sanctity excluding them from the jurisdiction of the ordinary Courts of Law.

## *THE PET OF THE FOREIGN COMMUNITY.*

MANY a time as we read the discussions in one newspaper after another on the subject of extraterritoriality in Japan, we are reminded of the old experience that familiarity, instead of discharging its usual function and breeding contempt, sometimes works in the opposite direction and begets a marvel:—

"As when we dwell upon a word we know
"Repeating, till the word we know so well
"Becomes a wonder and we know not why."

Extraterritoriality, one of the few nine-syllable words in the English language, has in truth grown to be a nine-days wonder in respect of the extraordinary significance and power attached to it. By the generality of foreigners it seem to be regarded as a species of talisman, capable of protecting them against any and every contingency incidental to life in the Orient. Do small boys throw stones at foreigners

Digitized by Google

in the streets of Tokyo, their unruliness is immediately instanced as a *raison d'être* of extraterritoriality. Does a *Soshi* interest himself importunately in the demeanour of a reverend gentleman towards the Sovereign of the country, forthwith the continuance of the extraterritorial system is held to be justified. Does a fanatic slash the head of a princely tourist, at once we are told that but for extraterritoriality we should all be exposed to terrible dangers. There is no limit to the range of this noble word's capacities, and by dwelling upon its imaginary benefits men have come to love it as much as such an ugly polysyllable can possibly be loved. The latest example of this sentimental affection is furnished by our esteemed contemporary the *North China Herald*. Writing of the Otsu incident, the Shanghai journal observes—and of course its observations are carefully reproduced by local English newspapers in Japan—that "the feeling of hatred of foreigners is not entirely dead, and that it is not safe yet to withdraw the protection of extraterritoriality." It is true that the *North China Herald* does not claim to be the original discoverer of this striking argument. It attributes it to "the opponents of unconditional Treaty Revision," on whose side it ranges itself. Thus happily there is no dispute about the credit of the invention, and we are able to consider its merits dispassionately. "The protection of extraterritoriality!" The phrase has a pleasant, comfortable sound, but what of its significance? Where does the protection of extraterritoriality commence, and how is it exercised? The extraterritorial system, as it exists now in Japan, does one thing and one thing only: it exempts foreign law-breakers from the jurisdiction of Japanese tribunals. Reduced to hard facts, that is the whole measure of its splendid powers. It does not beget constables and soldiers to guard foreign residents against chance ebullitions of the old *Joi* spirit, neither does it hedge them round with a halo that deters outrage and violence. The protection it affords is a wonderful myth, incapable of surviving the briefest exposure to truth and reason. Hardly could inconsequence be more magnificently illustrated than by the proposition that a system, the sole and only purpose of which is to regulate the mode of punishing a man for his own misdeeds, protects him at the same time against the misdeeds of others. The logic of the theory is really striking: extraterritoriality provides that a foreign law-breaker within Japanese territory shall be punished by foreign courts; therefore extraterritoriality safeguards the persons of foreigners against Japanese law-breakers. This is not a case of logic, however, but of love. Fondness has invested its object with virtues as imaginary as they are laughable. Had it not been for that respectable and dearly beloved institution, HER BRITANNIC MAJESTY'S Court at Kanagawa, and the heroic but solitary constable who represents and wields the strong arm of the law at the bidding of incorruptible officials, we might all have fallen victims to the bomb of a KURUSHIMA or the sword of a TSUDA. Let us be thankful.

## *THE "KEIZAI ZASSHI" AND THE COAST TRADE.*

THE arguments employed by the *Keizai Zasshi* in its crusade against the *Nippon Yusen Kaisha* do not appeal to us as being on a level with the usual writing of that excellent periodical. In speaking of the facilities for marine transport furnished by the big shipping company to the inhabitants of Hokkaido, the *Keizai* charges the Directors with taking railway rates as a basis of calculation, and thereby subjecting shippers to heavy expenses. But surely the *Keizai* must know that whenever railways and ships come into competition in Western countries, the railway wins the day. England is a conspicuous example. There, in former years, huge quantities of coal and ore used to be carried by coasting vessels, but these commodities now travel almost entirely by train. If the Japan Mail Steamship Company takes railway rates as a basis for calculating its own charges, Japanese shippers certainly can have nothing to complain of. Possibly our contemporary's allusion is to the rates prevailing on Japanese lines, rates which in some instances are said to be unduly high. We do not know how this may be as a general rule, but assuredly in the case of the Kobe-Tokyo line the advantage of cheapness is so greatly on the side of the shipping company that the water route is chosen entirely for goods. In Hokkaido, as we have always understood, the obstacle in the path of cheap shipping facilities is, not a disposition on the part of the Nippon Yusen Kaisha to levy heavy rates, but a state of affairs which, so long as it remains unremedied, renders cheap carriage an impossibility. The major part of the expense is incurred in collecting the goods and carrying them to the port of shipment. If Hokkaido possessed good harbours so that steamers could get within easy reach of the producing districts, the cost of transport would be very different. But with things as they are now, to lay the blame on the shoulders of a Shipping Company is to put the saddle on the wrong horse. The development of the northern island's resources must always proceed slowly until it is brought into touch with the markets of the mainland by the construction of good harbours, and by providing means of internal communication. The Nippon Yusen Kaisha cannot deal with this part of the problem. Its ships can only use the harbours as they find them. If the danger and difficulty of collecting and moving cargo greatly augment the expense, the increased cost must be attributed to physical obstacles, and not to any arbitrary exactions on the part of the shipping company. Has the *Keizai Zasshi* paid attention to these points? We are inclined to doubt it. There is a ring of somewhat prejudiced onset about our contemporary's article, where it asserts that the Government subsidy of 880,000 *yen* annually has the effect of checking the development of Hokkaido, since it enables the big steamship company to monopolise the carrying trade and to charge rates of freight that deter shippers. Such an argument cannot have been penned by a writer in calm and unbiassed possession of his reasoning faculties. It is a novel theory to assert that the enjoyment of a subsidy promotes or suggests high charges on the part of the company enjoying it. The subsidy paid to the Nippon Yusen Kaisha is for work actually done in carrying mail matter and so forth, but even if we assume, as the *Keizai Zasshi's* article suggests, that the amount is excessive, does it not result that the company is correspondingly competent to give its services to the public at cheap rates? Every one is familiar with the contention that Government support deters opposition, but it has yet to be gravely argued that by withdrawing Government support shipping facilities would be increased in a region where without public aid they could scarcely exist at all. The northern line of the Nippon Yusen Kaisha is not by any means a lucrative branch of its business, as we understand, and were the company freed from the obligation of carrying the mails thither, it would probably abandon the service with all the pleasure imaginable. We are accustomed to find the *Keizai Zasshi's* articles so accurate as to facts and so well considered, that this crusade against the Nippon Yusen Kaisha, especially in connection with Hokkaido, causes us much surprise.

## *CORRESPONDENCE.*

### ÆSTHETIC CHARITY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I beg you to use your influence to call the attention of the Government to the very urgent necessity of prompt measures being taken to preserve from utter destruction some works of incalculable artistic, historic, and religious value.

At Horiuji, and at the monasteries and temples in the suburbs of Nara, I saw last week among their countless art treasures, about fifty kakemono of great age, interest, and beauty which are crumbling positively to pieces from cruel neglect. They are in many instances quite equal to the exquisite illuminated missals and primitive masterpieces of Italy, France, Germany, and Belgium, which are so preciously preserved in glass cases of the great national museums and are famous all over the world.

Surely the Government of this, by far the most artistic of modern peoples, should not hesitate a day in voting the very trifling outlay necessary to reback them with at least stout cardboard, and preserve them, *pressed flat*, in some fire-proof building until the projected Museum at Nara is completed. May I be excused for adding how proud I was to notice on several scraps of paper the autographic gratitude from the pen of a

Digitized by Google

sympathetic priest, stating that the very handsome mounting of several *chef-d'œuvres* was due to the enlightened generosity of my friend and fellow-citizen Dr. W. S. Bigelow, of Boston. It is now some years ago that he set this good example of rescuing from anihilation works of art of incalculable value. Since then no one, thus far, has continued this Æsthetic Charity.

I am, Sir, yours faithfully,

RALPH CURTIS.

Tokyo, June 4th, 1891.

## THE HAIL STORM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In one direction at least, the hail storm of Saturday was very local indeed. It did not extend to Kanagawa Bluff.

Yours truly,

S. T.

June 8th, 1891.

## PROFESSOR HOWARD'S "SCIENTIFIC METHOD."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—When the history of Christian apologetics in the nineteenth century comes to be investigated an examination into the connection between want of "lucidity" and religious orthodoxy will doubtless prove an interesting branch of the inquiry; for it is impossible not to be struck with the steady deterioration not only in the arguments advanced, but in the mental calibre of some recent defenders of Christianity. A few days ago Professor B. Howard, M.D., F.R.C.S., exemplified, in his lecture to students of the Imperial University, printed in your columns, the class of mind to which in these days the defence of Christianity has fallen, and it would be interesting to know what impression the university students obtained of Professor Howard's "Scientific method" of judging Christ when trying to extract some meaning from such a sentence as this:—"In the time of the Christ, however, Jerusalem, then the capital of the then Jewish nation, in it, their temple unequalled, these books were to the Jews the core of all that was organic morally, socially, and politically in their nation"? This, as a friend of mine used to say, must have been a "clear as mud," but the succeeding sentence had doubtless a still more clarifying effect on the minds of the Professor's hearers:—"Here in Jerusalem amongst the teachers of these books, in the temple, would this Christ, a gentle unknown man, as the custom allowed, unrolling the scroll to the earliest prophecy, and rolling it up again to the latest prediction which contained their hope," &c., &c., &c. A "Custom" which would permit a "gentle unknown man" to be a "gentle unknown man" requires a Professor to do it full justice.

But if Professor Howard's literary flights are somewhat diverting, his "scientific method" of proving Christ is open to sterner criticism, for throughout his lecture he seems to be endeavouring not to instruct, but to throw dust in the eyes of his hearers. For instance, in the introductory portion of his remarks, he quotes from Mr. Spencer the sentence "True science is essentially religious," and from Professor Huxley, "True science and true religion are twin sisters," the implication apparently being that Professor Huxley, Mr. Spencer, and Professor Howard are agreed in the meaning attached by each to the term "religion." At any rate, Professor Howard, apart from his prefatory fling at the two scientific teachers he quotes, does not attempt to explain to the students he is addressing that the word "religion" would be defined very differently by his two authorities and by himself. The use made by expounders of "Christian evidences" of isolated passages in the works of scientific men ought to make scientists extremely careful in the phrases they employ.

Again, Professor Howard's treatment of what he calls the "historical" portion of his subject shows his method to be a not over-scrupulous one. He quotes from Josephus the famous passage about the Christians without one word of caution to his hearers that the passage is held by many, if not most, competent scholars to be a late interpolation; he gives a list of "profane" historians who mention Christ or Christians without hinting that the passages relied on are denounced on very good evidence as forgeries; nay, he goes even further than the ordinary Christian evidencer in stating, in one of his peculiarly constructed sentences, that "concerning all the so-called sacred writers, however, it may be here stated that with them, you will find all these so called profane writers, are as to the facts, in all cases in full accord."

Surely Professor Howard must know that critics who assert untrustworthiness of the references to Christ and Christianity in the "profane" historians have very good reasons in support of their position. For in truth the wholesale forgery which went on when the Church had all the literature of the civilised world in its possession somewhat overreached itself, in that it made the pagan writers of the first century apparently familiar with ideas and persons which do not appear in Christian literature until the end of the second and beginning of the third century. For example, Tatian, Athenagoras, and Theophilus are Christian writers who are generally considered to have lived about the beginning of the second century; and while each wrote apologies for Christianity (Theophilus saying we are called Christians . . . because we are anointed with the oil of God") none of them mention either Jesus Christ or the New Testament, and all, as a writer on this subject has pointed out, "attribute sayings (sometimes resembling, but for the principal part differing from, sayings put by the writers of our New Testament into the mouth of Jesus Christ) to the 'Logos' as an entirely spiritual being or influence."

"But," says the author of "Primitive Church History," "not only are Tatian, Athenagoras, and Theophilus silent regarding Jesus Christ, but all the pagan writers who flourished during our second century are silent, not only regarding him, but regarding the Christians. Now, is it probable that Josephus, Suetonius, Pliny (junior), and Tacitus really knew more about Jesus Christ than those early apologists for the Christians who never name him? Or is it probable that if 'great multitudes of Christians' during our first century attracted the attention of one Jewish and three pagan writers, who flourished towards the end of that period, not even one pagan writer would have taken notice of so remarkable a sect during the whole of our second century? These improbabilities amount to almost an impossibility. And the facts (1) that there is not any pagan writer of our second century who mentions the Christians, and (2) that those early apologists never mention Jesus or Christ, amount almost to positive proof that the passages regarding the Christians now found in Josephus, Suetonius, Pliny (junior), and Tacitus, *are forgeries.*"

In one portion of his lecture Professor Howard finds himself "obliged . . . to assume that we agree as to the authenticity of the New Testament" (this is his "scientific method," be it noted), and proceeds to "interpolate for what it is worth" a statement "that not long since 617 scientific members of the British Association passed a resolution to this effect:—'It is a perversion of Science to cast doubt upon the Scriptures.'" Now Professor Howard has so curious a method of dealing with evidence that I for one would be glad to be referred to the authority for this statement, and the year this remarkable resolution was passed, not that perhaps the resolution is of so much importance in itself as that it would be interesting to know the circumstances preceding the carrying of such a motion.

With respect, however, to the Gospels, upon the authenticity of which Professor Howard assumes our agreement, it may be interesting to have the opinion of a well known authority. Says the author of *Supernatural Religion* (vol. ii. 248-250):—"After having exhausted the literature and the testimony bearing on the point, we have not found a single distinct trace of any one of those [synoptic] Gospels during the first century and a half after the death of Jesus. Only once during the whole of that period do we find any tradition even that any one of our evangelists composed a Gospel at all, and that tradition, so far from favouring our synoptics, is fatal to the claims of the first and second. About the middle of the second century, Papias, on the occasion to which we refer, records that Matthew composed the Discourses of the Lord in the Hebrew tongue: a statement which totally excludes the claim of our Greek Gospel to apostolic origin. Mark, he said, wrote down from the casual preaching of Peter the sayings and doings of Jesus, but without orderly arrangement, as he was not himself a follower of the Master, and merely recorded what fell from the apostle. This description, likewise, shows that our actual second Gospel could not, in its present form, have been the work of Mark. There is no other reference during the period to any writing of Mathew or Mark, and no mention at all of any work ascribed to Luke. If it be considered that there is any connection between Marcion's Gospel and our third synoptic, any evidence so derived is of an unfavourable character for that Gospel, as it involves a charge against it of being interpolated and debased by Jewish elements. Any argument for the mere existence of our synoptics based upon their supposed rejection by heretical leaders and sects has the inevitable disadvantage that the very testimony which would show their existence would oppose their authenticity. There is no evidence of their use by heretical leaders, however, and no direct reference to them by any writer, heretical or orthodox, whom we have examined. We need scarcely add that no reason whatever has been shown for accepting the testimony of these Gospels as sufficient to establish the reality of miracles and of a direct Divine revelation. It is not pretended that more than one of the synoptic Gospels was written by an eye witness of the miraculous occurrences reported, and while no evidence has been, or can be, produced even of the historical accuracy of the narratives, no testimony as to the correctness of the inferences from the external phenomena exists, or is now even conceivable. The discrepancy between the amount of evidence required, and that which is forthcoming, however, is greater than, under the circumstances, could have been thought possible." And (vol. ii. 387) regarding the fourth Gospel he says:—"For some century and a half after the events recorded in the work, there is not only no testimony whatever connecting the fourth Gospel with the Apostle John, but no certain trace even of the existence of the Gospel. There has not been the slightest evidence in any of the writings of the Fathers which we have examined, even of a tradition that the Apostle John had composed any evangelical work at all; and the claim advanced in favour of the Christian miracles of contemporaneous evidence, of extraordinary force and veracity, by undoubted eye-witnesses, completely falls to the ground."

Not a word of mention of any of these criticisms does Professor Howard make when conducting his "scientific" investigations into the story of "The Christ;" he might, for all he says to the contrary, be blissfully ignorant that any such criticisms exist. However, not to make this letter too long, the quotations I have made are doubtless sufficient to show the students of the Imperial University, if any of them are readers of the *Japan Mail*, that Professor Howard's method, so far from being scientific, is the very antithesis of what is rightfully called by that name, unless suppression of facts and suggestions of the thing that is not should be held rightfully so denominated. What must those members of the Imperial University who have studied the questions treated by Professon Howard think of a religion which has to be defended by such questionable means as those employed by him? Truly Christian apologetics seen to exercise a very evil influence on the character of those addicted to these intellectual gymnastics.

Yours truly,

SECULARIAN.

Kobe, June 3rd, 1891.

## THE WORD "NATIVES."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is probably well known that there is a strong prejudice on the part of many Japanese against our use of the word *natives*. They assert that it implies a marked inferiority, and is disrespectful. They furthermore claim that we would'nt like it, were they to apply the word to us, and that therefore we should respect our Golden Rule and drop the objectionable term.

Some foreigners on hearing this complaint have felt that the Japanese were right, and have conscientiously laid the word in the shelf. Others, while not allowing that the Japanese are correct in their conclusion, have yet felt that their prejudice is so strong that it is better not to say *Natives*.

It seems to me that a frank consideration of this little subject may tend to a better mutual understanding, especially if it can be shown that our Japanese friends are liable to do us quite as great an injustice by their way of regarding this word, as we are supposed to be doing them.

Ask any ordinary Japanese who understands English how he translates *natives*, and his prompt reply will generally be *dojin* 土人. And if you ask to what kind of people this *dojin* is applicable, you will be told that it covers Ainos, North American Indians, and Africans. No wonder then that the Japanese are sensitive on this use of a word that classes them with uncivilized and barbarous races. How it is with other dictionaries, I cannot tell, but in Messrs. Shibata and Koyasu's large English and Japanese Dictionary—the only one I have at hand—the word *native* has but one translation, *dojin*. If other dictionaries give this same rendering, it will be seen why it is that the English word *native*, closely associated as it is in the Japanese mind with *dojin*, instantly produces a disagreeable feeling. *Dojin* has but one meaning—*aborigines in their barbarous condition*. But *natives* has two branches, one equivalent to the *dojin*, while the other is a perfectly proper word in any society, being generally the natural opposite to *foreigners*. "Foreigners and natives," or "Natives and foreigners" are words on a perfect equality, and are used by gentlemen and scholars without a thought of one being disrespectful and the other not so.

Digitized by Google

And since the word *dojin* is out of place in rendering this better meaning, some other words like *honkoku jin*, or *jikoku no hito*, should be used.

I was very much surprised and somewhat annoyed recently by a translation in the *Fiji Shimpo* of one of my articles from a foreign magazine, in which I had used the word "natives" three or four times. Twice it was very properly translated by the *Nippon-jin*, but in a sentence describing the work of foreign physicians as being to teach the principles of medical science, these words were added:—"The foreign physician has then fulfilled his mission and can safely turn over farther development of his art to the natives." The translation was;—*Guwai kokujin wa jibun no jigyo wo shitogetaru ga yue ni sono yo wo dojin ni makasu beki nomi.* This translation gave offence to some of my friends, as it did also to me. It made me say that a foreign physician could teach medical science to ignorant aborigines and safely leave the application of the knowledge to them.

Hoping that the *Fiji Shimpo* will translate this for the benefit of its wide circle of readers, I will add that the word *native* is applied impartially to any and all peoples, and it has taken its place in imperishable literature as a perfectly proper word. One example will be ample to show this:—

Ex-Secretary of State J. F. Bayard, in the May *Forum*, in his article on "State Rights and Foreign Relations" again and again uses the word *natives* in the sense of *citizens of the United States*. "A score or more instances can be found, in existing treaties between the United States and foreign nations, of stipulations for securing to citizens of each nation, residing within the territory of the other, the enjoyment of all the privileges of the most favoured nation and perfect equality with the natives."

Translate this by *dojin*, and it makes the United States offer to all foreigners perfect equality with the North American Indians!

But this statesman goes on to quote the exact language of our treaty with Italy, saying that Italians shall receive protection "upon the same terms as the natives of the country." By this it will be seen that Secretary Bayard, the President of the United States, and all citizens whatsoever are *natives*.

There are no documents of higher authority concerning the international meaning of words than treaties between the various Powers of the earth. If in these, *natives* means *citizens* as contrasted with persons of foreign birth, there is a use of the word that is high and honourable. And when foreigners who are known as the friends of Japan use this term, the only possible and correct thought a well-informed Japanese should have is that the usei s proper and gentlemanly.

J. H. DE FOREST.

Sendai, June 1861.

## "ANTI-HUMBUG."

To the Editor of the "Japan Mail."

Sir,—In reading your quotation from "Anti-Humbug," concerning missionaries, I was reminded of a conversation I had with the cashier of a bank in San Francisco. He visited Yokohama several years ago, became well acquainted with the clubs, and told me he found the people rather coarse; he thought they had been stable-boys before they came out. "Anti-Humbug" probably belongs to this class. He evidently thinks that money is the one thing that all men are striving for, and missionaries must be doing so also. The tastes and delights of an educated and polished gentleman whose nature is far above that of one who lives for sordid gain are so far beyond the range of "Anti Humbug's" comprehension that it would be impossible to bring him to appreciate them. They belong to the higher qualities of human nature. If I were to tell him that the missionaries did not come to Japan to give the Japanese new morals merely, but a new life, it would be a new idea utterly imcomprehensible to him. He has probably not yet reached the Ten Commandments.

Thanking you for your incisive and complete answer to such ignorant and spiteful faultfinding,

I remain, yours, &c.,

G. T. S.

Tokyo, June 8th, 1891.

## SECULARIAN'S "SCIENTIFIC METHOD."

To the Editor of the "Japan Mail."

Sir,—"Secularian," in his criticism in your issue of to-day of Professor Howard's "Scientific Method," exhibits a "Scientific Method" of his own, to two or three specimens of which I will, with your kind permission, very briefly call attention. He says of Tatian, Athenagoras, and Theophilus, that "none of them mention either Jesus Christ or the New Testament," and quotes the author of "Primitive Church History" to the same effect. Let us see how true this assertion is. Tatian is the author of the "Diatessaron," which was long supposed to be lost, but has been recently discovered in an Arabic translation, and was published in Rome by Ciasca, in 1888. It is a life of Christ formed by weaving together into one narrative the four Gospels, beginning with the opening part of the Gospel of St. John. But perhaps "Secularian" has not yet heard of this discovery. For Theophilus, let me quote from Bishop Lightfoot (Essays on "Supernatural Religion," p. 44). In his work addressed to Autolycus, "Theophilus introduces the unmistakable language of Romans, 1, 2 Corinthians, Ephesians, Philippians, Timothy, Titus, not to mention points of resemblance with other Apostolic Epistles which can hardly have been accidental. He has one or two coincidences with the Synoptic Gospels, and, what is more important, he quotes the beginning of the Fourth Gospel by name as follows 'Whence the Holy Scriptures, and all the inspired men teach us, one of whom, John, says, 'In the beginning was the Word, and the Word was with God' showing that at the first God was alone, and the Word in Him. Then he says, 'And the Word was God; all things were made by Him, and without Him was not anything made.'" (Compare also the Ante-Nicene Fathers, American edition, vol. 2, p. 103.) Theophilus addressed his work, which still remains, to Autolycus, a heathen, so that it would not be at all surprising if he had failed to quote the New Testament, nor would such failure be reason for doubting the authenticity of any New Testament book. The case is the same with Athenagoras. One of his extant works is a defence of the Christians, addressed to the Emperors Marcus Aurelius and Commodus, and dealing with three specific charges made against believers in Christ, 'atheism, Thyestean feasts, Oedipodean intercourse.' The other is a defence on philosophical grounds of belief in the resurrection of the dead. Nevertheless, in the former work, are quoted, usually, with the formula, "He says," the words of our Lord (in Luke vi. 27,28 and Matt. v. 44,45) beginning "I say unto you; Love your enemies," and ending "sends rain on the just and the unjust" (in Matt. v. 28), "For he that looketh on a woman to lust after her, hath committed adultery already in his heart" (in Matt. xix. 9). "For whosoever puts away his wife, and marries another, commits adultery," and (in Luke vi. 32, 34, Matt. v. 46, though less exactly,) "for if ye love them that love you, and lend to them that lend to you, what reward will ye have?" In the latter work are found the words "in the language of the apostle 'this corruptible (and dissoluble) must put on incorruption.'"

So much for "Secularian's" assertion that these three fathers do not mention the New Testament. His assertion that they do not mention Jesus Christ has already been disposed of as regards Tatian. The others in their extant works do not indeed mention Him by that name. But Theophilus speaks of Him as the Logos, or Word, and Athenagoras speaks of Him frequently both under this name and that of Son and God, besides quoting His Words, and entitling his own book, "A Plea for the Christians." But if "Secularian's" assertion were true, what bearing would it have on his criticism of Professor Howard? Would he have us understand that he thinks there were Christians in the latter half of the second century who had never heard of Jesus Christ?

"Secularian" quotes the author of "Supernatural Religion as a "well-known authority." Since Bishop Lightfoot's criticism of him, he may indeed to be said to be "well known," but hardly as an "authority." The New York *Nation*, which certainly has no "apologetical" bias, but rather the reverse, said of Bishop Lightfoot's Essays on "Supernatural Religion," republished in 1889 from the *Contemporary Review*, that the Bishop has conclusively shown (I quote from memory), that the author of Supernatural Religion had misunderstood the authorities which he used, "not because their meaning was obscure, but because they were written in Latin and Greek." If "Secularian" pins his faith on such authorities as this, his own errors are quite naturally accounted for, and should be treated leniently.

T. S. TYNG.

Tokyo, June 9th, 1891.

## *THE ASIATIC SOCIETY OF JAPAN.*

A general meeting of this society was held in its rooms on Wednesday, 10th instant, at 4 p.m., the President, N. J. Hannen, Esq., occupying the chair. There was a good attendance. The election as resident members of Rev. J. McKim of Osaka, Mr. J. F. Lowder of Yokohama, and Rev. G. T. Smith of Tokyo, was announced. Thereafter Mr. Chamberlain was called upon to read a short note by Mr. Aston, in reply to strictures offered by Mr. Parker in a recent paper on Korea, the strictures being, in Mr. Aston's opinion, based on a misconception. The next paper was a short survey of the Habits of the Blind in Japan, by Professor J. M. Dixon, of which the following is a pretty complete report:—

Until about 1,000 years ago the condition of blind folk in Japan seems to have been pitiable. A burden to relations, shut out from any calling or social rank, and looked upon as unlucky and uncanny, those who became blind entered into a state of almost unqualified misery. Providence, in the shape of a blind prince, stepped in to aid them. The Emperor Kokan Tenno, who succeeded his father Ninmei in 885 A.D., had a son named Amago-no-mikoto who was born blind. Finding that the ordinary courtiers could not amuse the lad, he summoned to his palace eight hundred blind men of learning and fame, some of whose names—Miokan, Miomon, Shido, Sakurai—have come down to us. The young prince having shaved his head, all these men followed his example; and a shaven head is to this day a distinctive mark of a blind man.

At the age of thirty, Amago-no-mikoto having been appointed governor of the three provinces of Hiuga, Osumi, and Satsumi, was accompanied thither by a retinue of blind courtiers who carried out his wishes and helped him in the duties of government. When growing old, he retired to Kyōto, and entrusted these men with the duties of the governorship—a practice which was repeated until it grew into a precedent. Blind men ruled these three provinces until the reign of Go-shira-kawa-tennō—a period that is reckoned the happiest in the annals of Japanese blind-folk.

About 1180 A.D. civil war broke out in the empire and, in the fierce contest for supreme power waged between the rival houses of Taira and Minamoto, the weak had everywhere to give way before the strong. The peaceful and happy state of affairs that had allowed blind governors to rule a province ceased for ever, giving place to war and bloodshed. At the close of the 13th century the poor blind officials were everywhere dispossessed and reduced to a state of poverty and destitution. The attention of the government having been called to their condition, it gave orders to the governor of each province to succour them, but after the reign of Go-tsuchi-mikado, 1467 A.D., even this small boon was taken away. When the Tokugawa family came into power, a complaint was made regarding the wretched state of the blind throughout the realm, and permission was granted them to travel from province to province, their pocket-money to be provided by the head of each township. Thus matters continued until the great Revolution twenty-three years ago. This event again proved disastrous to most of the blind people and efforts have since been made to relieve them by establishing asylums where they learn amongst other accomplishments to read from raised characters. Several foreign missionaries have been and are bestowing labour on the advancement of education for the blind, and Japanese beneficence built a school, to be the nucleus of a larger building near the great Tsukiji Temple of Tōkyō. This school has been recently removed to Koishikawa, and joined to the Deaf and Dumb Institute. At Kyōto there is another of these institutions.

The members of the blind guild followed two occupations—music or chanting, and shampooing or massage. The songs they used to sing mostly celebrated the glory of the house of Taira, and were composed by a poetess of note, Murasaki Shikibu. Their favourite instruments for accompaniment were the *biwa*, the *samisen*, and the *kōtō*. Those lower grade were shampooers *(amma)*, or needle-doctors, who cured by the counter-irritant system *(shinjutsu)*. To this day these blind shampooers fill the streets with their cry; *amma kami shimo go hiakumo* (5 *sen* for shampooing the body from head to foot).

The musicians who played on the *biwa* were called *biwa hoshi*, and were highly thought of by all the people. Occasionally they had the honour of receiving invitations to perform from emperors and *shōguns*. Others who had become blind, unable to compete with the blind musicians—for the most part skilful musicians were those born blind—took to story-telling as a profession, or made poems in Japanese and Chinese. Seminaru, a blind prince, was one of the most ac-

Digitized by Google

complished of Japanese poets. A shrine, occupying the site of his summer house, is still pointed out in the vicinity of Ozakayama tunnel, at Otsu near Kyōto. Others again practised the art of divining.

The higher official grades open to blind men came in time to be eagerly sought after and were often purchased with a large sum of money, even as much as 500 *ryō* being paid for the coveted distinctions. In consideration of this fee the ministers at the Emperor's Court let those who paid go free from examination. The holders of official rank had many privileges, some of them monetary, which enabled those who paid a fee to reimburse themselves later on. They were allowed to use a special *kago* reserved for men of high rank only, and on entering the inner gate of a castle they were not compelled, like common people, to leave their *kago* and make the required obeisance. The sign of their dignity was a staff, of red lacquer in the case of a first-class official, of black in that of the second-class. The privilege was also granted them of conferring the petty ranks on inferior members of the brotherhood—a considerable source of revenue.

These blind officials were frequently put to questionable uses in the stormy period between 1400 and 1600 A.D. Generals and barons took blind musicians into their pay and employed them as spies, and many a castle was taken and many an army ruined by this device.

It takes nine years for an *amma* to learn his calling. During his first three years of apprenticeship he practises on the limbs and body of his master. Then for the next three years he is taught the art of acupuncture (*shinjutsu*). For the three years that still remain he is, so to speak, on trial and receives only half the usual fee (6 *sen*), and even this moiety goes to his master. Even after the nine years apprenticeship he is expected to make some presents to his master before he becomes free to practice for himself. Those who set up for any reputation as shampooers practice the art at home; the others wander through the streets offering their services at a cheap rate or crying *amma harai*—shampooing and acupuncture!

Some blind men have distinguished themselves outside of the usual professions. It was not uncommon for blind men to be skilful players at *go*, and one blind *go* player is said to have gained a victory over a prince. The prince, in a fit of jealous anger, killed him, an act for which he afterwards suffered death. This event is said to have happened about 250 years ago; but for the truth of the story we cannot vouch.

The famous author Hanawa (1762-1786 A.D.) was blind. His work, Gunshio-rin-shiu, a valuable repertory of information consisting of 635 volumes, containing 1,273 parts, is still referred to as an authority; it is a unique and excellent performance."

Mr. Chamberlain pointed out an omission in the paper, which had neglected to mention the fact that the practice of usury was common among blind men, and brought them considerable unpopularity from the strict way in which they treated their debtors.

Dr. KNOTT was then called upon to read his paper on "The Summer Climate of Karuizawa." He commenced by remarking that this place, now a popular summer resort, is but of recent date in this capacity having been "discovered" so to speak, in 1886 by Ven. Archdeacon Shaw and Professor Dixon, who were attracted by its peculiar merits.

Since then, said he, it has rapidly grown in favour. House after house has been built; and the neighbouring village has entered upon what is practically a new lease of life. The decay of feudalism after the restoration and the construction of the new road over the lower *toge* diminished the importance of the little hamlet, which gradually sank to insignificance and poverty. Now, however, thanks mainly to foreigners seeking pure air, Karuizawa has recovered much, if not all, of its former prosperity. Its vicinity to the railway terminus has also no doubt had good effect in sustaining its reawakened energetics. It may not be amiss then to put on record the results obtained from a regular and systematic series of Meteorogical Observations carried out during the summer months of 1889.

Karuizawa lies ensconced in a pretty nook of wooded and grassy hills. Southwards it looks across an undulating plain, through which flow numerous rivulets that finally find their way westwards and northwards to the Japan Sea. The ridges that bound this plain on the east form the watershed between the easterly and westerly river systems of Japan. On the eastward side the ridges drop abruptly by steep escarpments and deep cut valleys. Dense foliage and fantastically weathered rocks combine in shaping some of the most wonderful scenery of Japan. On the westward side, however, the contour of the country is much smoother. The land gently dips to the westward; and so long as Karuizawa is in sight it is difficult to realise that the region is fully 3,000 feet above the sea level.

To its position on the "great divide" many of the climatic peculiarities of Karuizawa can readily be referred. Let us suppose ourselves standing, some clear summer afternoon, on the summit of the hill close to the old Pass, that is, some 700 feet above and half a mile to the east of the village. We have an uninterrupted view to the southeast far away to the plain of Musashi. The sky is clear; but the cool of the day is coming on. A thin streak of cloud suddenly appears across the sky blue or the earth green. It seems to grow and draw near; and before we are well aware of it, we are enveloped in a sea of fog, and the exquisite scene is hid from view. The fog cloud drifts over the ridges, and through the passes, and tumbles over upon the Karuizawa plain. Where a cold marshy spot lurks between the hamlet and the new road, it pushes out spectral vanguards; so that even though Karuizawa itself may be pretty clear this mist threatens it on all sides. Only a steady westerly breeze blowing up the great valley that skirts the southern slope of Asama-yama can withstand this inroad of drifting cloud. Once it has established itself on the surrounding crests late of an afternoon, there it will remain till the returning heat of day dissolves it into transparency. Such a constant visitant is apt at times to be disagreeable; but it certainly is not unhealthy.

Thus not only is Karuizawa exposed to all the cloudiness that may characterise such lofty regions, but it is so situated that it cannot escape the condensation that is a natural result of the cooling off of the currents of warm moist air as they blow up the steep escarpments of the Usui basin.

It was out on the plain already spoken of that I put up a rough shed to serve as a Meteorological Observatory. The site was chosen by Professor Dixon; and was in every respect suitable. The grove to the north of it was too far away to have any appreciable influence upon the indications of the instruments. So also the nearest ridge to the east was too distant to afford any real shelter. The shed was simply a roof set on six upright posts. The eaves dipped low all round so that it was impossible for any direct skylight to shine upon the thermometer bulbs. The thermometers, four in all, were attached to a board in the centre of the shed.

Since what is wanted is a general comparison of Karuizawa weather with, for example, Tokyo weather, a complete reproduction of all the individual observations made is uncalled for. I propose to epitomise the results in a form convenient for the general reader. All the quantities will be given according to the metric and centigrade system, which is the authorised system in Japan. The more important quantities will, however, also be given in terms of the usual English units, to which English speaking peoples all over the globe are accustomed. To particiuarise, the barometric pressure is measured in millimetres of mercury, the temperature in degrees Centigrade, the vapour pressure in millimetres of mercury, the rainfall in millimetres of water. The principal means and totals are also given in inches, in degrees Fahrenheit, and in inches respectively. The humidity is in per centages. The barometer readings are all reduced to the freezing point of water.

In the table at the end will be found a direct comparison of Five Day means or totals for Tokyo and for Karuizawa, beginningwith July 15th and ending with September 2nd, 1889. The Tokyo numbers are taken from the Annual Report of the Meteorological Office. A study of this Table will show that the difference between the barometer readings is very steady; but that there is considerable fluctuation in the differences of temperature. With the distinctly lower temperature the vapour pressure is less at Karuizawa than at Tokyo. The humidity, however, tends to be greater; while the rainfall is much more excessive at the high level station.

To bring out the daily variation in the meteorological conditions at the two stations, means and totals for the month of August are arranged in the subjoined table, each column of numbers containing the means or totals corresponding to the hours marked at the head. The letter T is prefixed to the rows of numbers referring to Tokyo, and K to the rows of numbers referring to Karuizawa.

GENERAL COMPARISON OF THE METEOROLOGICAL CONDITIONS AT TOKYO AND KARUIZAWA DURING AUGUST, 1889.

| | | 2 a.m. | 6 a.m. | 10 a.m. | 2 p.m. | 6 p.m. | 10 p.m. | Mean. |
|---|---|---|---|---|---|---|---|---|
| Barometer | T | 756.5 | 758.8 | 757.0 | 755.9 | 755.8 | 756.9 | 756.5 |
| | K | | 679.5 | 679.2 | 678.7 | 678.8 | 679.5 | 679.1 |
| Temperature | T | 23°.4 | 23°.1 | 27°.7 | 29°.1 | 26°.5 | 24°.6 | 25°.7 |
| | K | | 18°.3 | 23°.3 | 24°.5 | 21°.2 | 19°.2 | 21°.3 |
| Vapour Pressure | T | 20.1 | 19 9 | 20.3 | 20.3 | 20.5 | 20.2 | 20.2 |

| | K | | 51.7 | 24.8 | 25.9 | 66.4 | 43.2 | 212.0 |

2.—THERMOMETER READINGS IN AUGUST.

Highest in Tokyo=30°.3 (91°.9 F.) on 2nd and 3rd.
Highest in Karuizawa=31°.3 (88°.3 F.) on 3rd.
Lowest in Tokyo=16°.3 (61.°3 F.) on 28-29th.
Lowest in Karuizawa=13.°1 (55.°6 F.) on 28-29th.
Highest daily range in Tokyo=10°.4 (18°.5 F.) on 16th.
Highest daily range in Karuizawa=18°.1 (32°.6 F.) on 5th.
Lowest daily range in Tokyo=3°.0 (5°.4 F.) on 20th.
Lowest daily range in Karuizawa=2°.3 (4°.1 F.) on 29th.
Mean daily range in Tokyo=7°.7 (13°.9 F.)
Mean daily range in Karuizawa=11°.1 (20°.0 F.)

3.—VAPOUR PRESSURE IN AUGUST.

Highest in Tokyo=24.9 (.980 in.) on 25th at 2 p.m.
Highest in Karuizawa=25.3 (.996 in.) on 9th at 2 p.m.
Lowest in Tokyo=12.4 (.488 in.) on 31st at 10 a.m.
Lowest in Karuizawa=9.2 (.362 in.) on 31st at 6 a.m.

4.—RAINFALL IN AUGUST.

Heaviest 4 hrs'. in Tokyo=11.2 (0.45 in.) on 19th at 6 a.m.
Heaviest 8 hrs'. in Tokyo=15.6 (0.61 in.) on 19th at 6 a.m.
Heaviest 8 hrs'. in Karuizawa=21.2 (0.83 in.) on 19th at 6 a.m.
Heaviest day's in Tokyo=35.2 (1.39 in.) on 28th.
Heaviest day's in Karuizawa=61.5 (2.42 in.) on 19th.
2nd heaviest day's in Karuizawa=42.5 (1.67 in.) on 28th.
2nd heaviest day's in Tokyo=18.1 (0.71 in.) on 19th.

In the following Table a more general comparison is made between Karuizawa and four of the regular meteorological stations, chosen so as to enclose Karuizawa as an approximately mean point. These stations are Tokyo, Niigata, Fushiki and Gifu. The latitudes and longitudes and heights above the sea-level are as follows:—

| | N. Lat. | E. Long. | Level. |
|---|---|---|---|
| Tokyo | 35°41′ | 139°45′ | 20.1m. ( 66.0 ft.) |
| Niigata | 37°55′ | 139° 3′ | 9.8m. ( 32.2 ft.) |
| Fushiki | 36°47′ | 137° 3′ | 4.3m. ( 14.1 ft.) |
| Gifu | 35°27′ | 136°46′ | 15.0m. ( 49.2 ft.) |
| Karuizawa | 36°21′ | 138°38′ | 962.0m. (3156.2 ft.) |

Thus Tokyo and Niigata lie to the east of Karuizawa; Fushiki and Gifu to the west. Also Niigata and Fushiki lie to the north of Karuizawa, and Tokyo and Gifu to the south. All except Karuizawa lie near the coast.

The mean August temperature is 70.°3 F., or almost exactly 8° F. lower than the mean August temperature for Tokyo. This difference of 8° F. is one of the chief factors that make Karuizawa such a pleasant summer resort. Conjoined to this, however, there is the greater relative coolness of the nights. There is a mean oscillation of 20° F. in the daily temperature, as compared with 14° F. at Tokyo. The greatest daily oscillation observed was 32.°6 F. at Karuizawa; while at Tokyo the greatest oscillation was only 18.°5 F.

The humidity is practically the same at both places. The lower temperature at the hill station robs this humidity of most of its relaxing tendency.

The rainfall at Karuizawa was 8.35 inches during the month of August; while at Tokyo it was only 3.8. This excess is due to the heavier character of the showers at the high level station, a necessary consequence of the presence of hills around a region exposed to moisture laden winds. It will be noticed that Gifu, likewise situated in the vicinity of hills, has also a relatively large rainfall. At Niigata and Fushiki, both situated on the west coast, the precipitation is not much more than half that for Tokyo. That it is the heaviness of the showers that makes the difference is seen at once by comparing the number of rainy days at the various stations. Fushiki is characterised by the greatest humidity and smallest number of rainy days; while Gifu with the lowest humidity is second only to Karuizawa in the number of its rainy days. This is a very good illustration of the effect of the configuration of the country upon the rainfall.

It will be seen from the Table at the end that the heaviest rainfall occurred towards the end of August. Between August 18th and August 31st, two storms swept over the country. These were however, in no way remarkable either for high wind or very excessive rain, and could not be compared with the storms that did so much damage in August of 1890.

In addition to the heaver rainfall at Karuizawa there are the morning and evening mists already spoken of. Nevertheless, in spite of this appearance of greater wet there is not the least doubt as to the healthiness of the place in summer. It

Digitized by Google

is probable that the improved drainage of the plain that stretches in front of the village has diminished this tendency to fog; and the more completely will the drainage is carried out the more thoroughly will the fog clouds be confined to the surrounding peaks and ridges. The porous character of the volcanic soil prevents the surface accumulation of water even after heavy rain, if we except of course the marshy depressions that have not yet been drained. Finally with its comparatively cool summer weather, its cold refreshing nights, its heavy air-clearing showers, its southern aspect, and its position close to some of the most picturesque mountain scenery of Japan, Karuizawa leaves little to be desired as a summer retreat. It is much cooler and I believe, drier than Nikko, although I am not aware that any systematic observations have been made at this most popular of summer resorts. To note the number of rainy days during the season would be a simple matter and would in itself have some significance; but in the lack of even that amount of definite information, we can only judge from general impressions in different seasons. It is, I believe, the general opinion of all who have tried both, that Karuizawa is, all round, the more satisfactory as a summer residence and as a place for rational enjoyment."

In a note to the main paper Dr. Knott used some recent results obtained on the top of Fujiyama for the purpose of comparison. These results taken simultaneously on the top of Fuji and Lake Yamanaka near its base, were carried out by the Meteorological Office during August and a part of September, 1889. The means for August for these stations were :—

| | Bar. | Range. | Temp. (C) | Range. | Vap. | Hum. | Rain-fall. | Rainy Days. |
|---|---|---|---|---|---|---|---|---|
| Fuji Top | 490.7 | 13.1 | 7.7 | 11.6 | 5.5 | 71.2 | 888.1 | 18 |
| Yamanaka | 677.5 | 11.8 | 20.6 | 9.6 | 16.0 | 88.7 | 580.4 | 18 |
| Numazu | 757.6 | 12.7 | 25.8 | 7.2 | 20.5 | 83.0 | 187.2 | 23 |

The maximum and minimum thermometer readings on the summit of Fuji were 70°-5 F. & 31°.1 respectively. The mean daily range is a little higher than at Karuizawa. The excessive rainfall, 36 in., which was confined mostly to three days, is especially noticeable. These observations, if used for determining the height of the mountain, would give an approximate height of 12,238 feet, somewhat lower than the accepted figure.

The President made a few remarks, dwelling on the great range of daily temperature at Karuizawa which seemed to him likely to be trying on the health. Dr. Knott explained, however, that the rise and fall were not sudden or arbitrary, but marked the difference between cool nights and warm days, the nights being specially cool. Professor Wigmore expressed surprise that one month's observations only had been placed before them; could these results be looked upon as thoroughly representative? Dr. Knott replied that, considering the nature of the results and the normal weather experienced, he was inclined to be satisfied with their essential trustworthiness. Mr. Lowell expressed a wish that the 2 a.m. readings had been taken, as in certain tropical counties he had visited the night colds were simply excessive, and a peculiar danger to health. Dr. Knott, however, pointed out that the minimum readings were given, which seldom registered 1° C below the observation at 6 a.m.

Business was then proceeded with. A new draft of rules were presented by the council for acceptance by the Society. On the motion of Professor Tison, seconded by Dr. Amerman, these were unanimously adopted as printed in proof copy. The President explained that there was little rashness in this wholesale acceptance, as these rules had passed through a rigid scrutiny in Committee. This closed the business for the day.

## *LECTURE BY MR. MILN.*

The following is Mr. Miln's lecture, delivered on Wednesday evening in the Masonic Hall:—

Two sisters entered the world upon the same day. In childhood they lived lovingly together. No differences separated them, no quarrels marred the happiness of their lives. When the employments of youth displaced the frolicsome idleness of earlier days, their aims and their purposes were still undivided. A single object inspired their minds, a common aspiration united their energies. In a word, their relations were natural and so harmonious. At length, however, an unhappy feud arose. Jealousy took the place of confidence, and the sweetness of love was driven away before the bitterness of hate. To day they stand apart, suspicious and distrustful, expecting from each other naught but ill, and evincing astonishment at any sign of the old love which bound together and ennobled their youthful occupations. You have anticipated, I am sure, the unfolding of this analogy. The Church and the Theatre, twin children of the religious instinct, happily joined in the remote past in the elevation of human life, have drifted into a position of alienation and antagonism, which, if not now so positive and virulent as it has been, is still so distinct and emphatic as to prevent that hearty co-öperation between them which would so surely enhance the effectiveness of both. Sundered by mutual distrust, they waste those energies which should be directed to the education and refinement of society in useless conflicts and worse than useless recrimination. Divided by civil strife, the advances of the common enemies of both—ignorance, licentiousness, crime—too often pass unnoticed and unopposed. I remember to have read somewhere a remark of the late Canon Kingsley, whose name has long been synonymous with all that is earnest and manly, to this effect; speaking of the instructiveness of the dramatic art, he said:—"I have derived more practical Christianity from reading Shakespeare's plays, and seeing them enacted on the stage, than from any sermon I ever heard preached from the pulpit." Now this remark of Charles Kingsley—besides confirming my own view of the ethical value to society of the dramatic art in its nobler expressions—suggests to my mind an inquiry. It is this. If dramatic literature and art could do so much for so thoroughly noble a man as Kingsley, why may it not accomplish as much for society in general? If in his case the play supplemented or, indeed, surpassed the sermon, why should it so frequently become the chief end of the sermon to destroy the play? Why should these sister forces—born of the same mother, and capable of achieving the same ends—sustain a relation of distrust and enmity? And this inquiry led me to ask still further: What caused the separation of the church and theatre, which is so much to be deplored; and why may we not look forward to a time when the pulpit and the stage having passed into nobler condition, shall again stand side by side, hand clasped in hand, as loving sisters, mutually ambitious to promote the true elevation of humanity? To seek and express in an entirely sanguine and friendly spirit an answer to this question, is the congenial task of the present hour. And if my conclusions do not commend themselves to all before me, yet we shall all, I am quite sure, endorse a few lines from an old writer on the same subject, in whose spirit all sincere inquiry should ever be conducted:

> "The stage I choose, a subject fair and free—
> 'Tis yours, 't is mine, 't is common property,
> All common exhibitions open lie
> For praise or censure to the common eye:
> This is a general tax which all must pay,
> From those who scribble down to those who pay.
> To clap or hiss all have an equal claim,
> The cobbler's and his lordship's right the same." *

At first, I wish to insist upon the early relationship between church and theatre, of which I have already made mention. It is knowledge, easily within the reach of all before me, that the dramatic art was begotten of the same impulse as religious worship, and that, among all nations, their earliest forms were simultaneously developed. In the far East, where the drama exists in its crudest forms, in China and in Japan, we see the songs and dances of early religious festivals gradually breaking away from the custody of the priests, to be conducted by a distinct class of actors. But with them as with us the impulse which has led all nations into the institution of religious forms and ceremonies, is also found to be the real source of the dramatic art. In India, the high caste Brahmins attribute the origin of the drama to Bharata, an inspired sage, who received his inspiration, as they allege direct from Brahma himself; and to me it has been exceedingly interesting to find that with this remarkable people the earliest dramatic representations were directly controlled by the priests. The priests of the altar were the first actors; and all their sages conceived of the drama as the helpmeet of religion, and as a powerful factor in the education of the people. "What," inquires an Indian sage of an actor, "are those qualities which the virtuous, the wise, the venerable, the learned, and the Brahmins require in a drama?" Hear the significant reply: "Profound exposition of the various passions, pleasing interchange of mutual affection, loftiness of character, delicate expression of desire, a surprising story, and elegant language." Certainly, in the matter of "a surprising story," the dramatic writers of our time are not often disloyal to this definition. We perceive, then, that even after the Hindoo drama had risen into a distinct existence, its true aim was still held to be to impart instruction through the agency of amusement. And I here make bold to say that if in all nations actors and dramatic authors had been true to this conception, the stage, as a factor in our civilization, would have been more influential than the pulpit, whose aim, in the main, has been to impart instruction without the least amusement in the world! It is in classic Greece, however, that we find the early drama most distinctly and honourably allied with Church and State, as it was in the country of Œschylus, Sophocles, and Euripides, that that art attained the summit of its early glory! The origin of the Grecian drama is found in those heterogeneous ceremonies—in which the sacrifice of animals, tumultuous dances, and mystic chants formed the chief features of the worship of Dionysius, Bacchus, and kindred divinities. In Greece, the theatre attained its greatest dignity. Its actors were among the most honoured and let us hope among the most honourable of citizens. The distinctions they obtained were second to none. Supported by state grants, flattered, yes! adored by the populace, and, when victorious, crowned with the laurel wreath—to them more precious than a glittering diadem—they long maintained a position of the greatest dignity as public entertainers and instructors. The theatre in Greece was a truly National Institution. Its performances were often witnessed by as many as 30,000 spectators,—if we could have had just one house a week of that size!—and were conducted with all the pomp and solemnity of a religious ceremonial, and it was undoubtedly the most influential, as it was the most far reaching, institution of national instruction and enjoyment. The Roman drama was at the first imported from Greece, but it never assumed the dignity, either from a literary or dramatic standpoint, which characterized the Attic stage. It was in Rome, too, that the stage first came into conflict with the Christian church! The stage had fallen into a condition of indecency, which justified its condemnation; but we find, strangely enough, a most significant testimony to the effectiveness of the drama, as an educational force, in the fact that the very Christian Fathers who condemned the Roman stage, themselves wrote tragedies and comedies, based upon the picturesque portions of the Old and New Testaments. Indeed, the single link which connects the old Roman drama with that of the middle ages is found in this class of plays in which God, Abraham, Moses, Job, and his majesty, the Devil, were the dramatis personæ. Gregory Nazianzen's "Passion of Christ" still remains as a specimen of this era of the dramatic art. Speaking of the devil, it is worth noting that he was in the main exceedingly popular with the spectators, receiving much applause and frequent recalls; while such saints as Abraham and Job stood sulking in the wings without a single hand! This fact, however, should not be attributed to the moral obliquity of the age so much as to the fact that to the devil were entrusted all the best comedy parts of the play! I have dwelt long enough, however, on this phase of the subject. What I have said will sufficiently illustrate the meaning of the remark that the Church and Theatre are twin children of the Religious Impulse, and that their childhood was spent in loving fellowship. Upon what ground, then, are we to account for the coldness and enmity which has so long divided them? The story is too long for detailed narration. Only a snatch here and there can possibly be given now. But it will help our understanding of the situation if we notice the difference in process by which Church and Theatre have sought to attain the same object. The Church has aimed to reform society by directly attacking its defects, by pointing out its immoralities, and describing the penalties in store for wrongdoers. The Theatre, on the other hand, has endeavoured to make vice loathsome by depicting it as it is, by holding

> "the mirror up to nature,'

that virtue might see her own features, scorn her own image, and

> "The very age and body of the time his form and pressure."

On the one hand preachers of religion have stood as the exponents of unwelcome dogmas, breathing forth prophecies of prospects far from delightful; while actors, on the other, have simply reflected the age to itself, have served as

> "The abstracts and brief chronicles of the time."

The method of one has been positive and aggressive, of the other merely reflective. Now I am not at all sure but the most effective way to convince an ugly woman of her lack of beauty would be to bring her face to face with a truth-speaking mirror; certainly it would cause less anger on her part, especially if the meeting (speaking after the manner of the Celts) could be pre-arranged accidentally, than for one to plainly say, "My dear madam, you are very far from beautiful." The Church has chosen the latter method, the Stage the former; and it is my belief that if the Church has improved the tone of society by its promises and its warnings, quite as certainly

> "Guilty creatures sitting at a play"

have been inspired to nobler life by the actor's art. Do you not see, however, that advocates of the positive method adopted by the Church would be-

* Caricature of Prynne's Histriomatix.

Digitized by Google

come suspicious and impatient touching the more negative process employed by the Stage. To an enthusiast, moderation is always the most damnable of sins. Another consideration which aids us in analyzing the enmity between Church and Stage is this: The Stage in every age has, with a very great degree of fidelity, reflected the moral status of that age. Is it not easy to believe that these reflections have not always declared the success of the Church in ennobling and purifying the age concerned? The Church has stood forth as the official monitor of society; the Stage in showing society in its "form and pressure," has practically said to the Church, "here, look upon your work;" and it is needless to say that the picture has been often far from flattering! The most distinct and overt attack upon the Stage since the middle ages, was that which occurred in England in the seventeenth century. And here let me acknowledge that, at that time, the condition of the Stage was far from ideal; that it needed purification. But the error of the Church was in mistaking destruction for government. It set its face as a flint against all plays and players. The latter were vermin to be exterminated, or as Prynne, author of Histriomastix, calls them, the "inveterate gangrened ulcers" of the age; the former, the special devices of the devil for the ruin of unwary souls. All remontrances against the Stage dropped into invective, discrimination gave place to slander, and mutual vilification became the order of the day! As an illustration of this I cannot do better than quote the title of the work by Prynne of which I have just spoken, the publication of which afterward, as I am glad to relate, cost its author a split nose and a pair of ears. This is how it runs: "Histriomastix, the player's scourge; or, Actor's Tragedie:—Divided into two parts, wherein it is largely evidenced, by divers arguments, by the concurring authorities and resolutions of sundry texts of Scripture, of the whole primitive church, both under the law and gospels, of fifty-five synods and councils; of seventy-one fathers and Christain writers, before the year of our Lord 1200; of above one hundred and fifty foreign and domestic Protestant and Popish authors since; forty heathen philosophers, historians, poets, of many heathen, many Christian nations, republics, emperors, princes, magistrates; of sundry apostolical, imperial constitutions; and of our English statutes, magistrates, universities, writers, preachers. That popular stage-plays (the very pomps of the devil, which we renounce in baptism; if we believe the fathers) are sinful, heathenish, lewd, ungodly spectacles, and most pernicious corruptions; condemned in all ages as intolerable mischiefs to churches, to republics, to the manners, minds, and souls of men. And that the profession of play-poets, of stage players, together with the penning, acting, and frequenting of stage-plays, are unlawful, infamous, and misbeseeming Christians. All pretences to the contrary are here likewise fully answered and the unlawfulness of acting, of beholding academical interludes, briefly discussed. Besides sundry other particulars, concerning dancing, dicing, health-drinking, etc., of which the table will inform you." Such is the title. You do not care for the "table" in the same day, I imagine! Such was the tone taken up by the church against the stage; such the antagonism between these twin sisters. A couple of years ago, I read an article, published in the *North American Review*, in which a distinguished minister inveighs against the Stage in a spirit scarcely less bitter. And I found that between his condemnation in the nineteenth, and Prynne's in the seventeenth century, this analogy subsisted that neither of them knew very much about the institution which they so bitterly denounced. The writer in the *Review* says, that while he was still a callow youth, he was fascinated by the theatre; and that attendance upon it developed in him a certain priggishness of behaviour, which, judging by his article, he has never entirely thrown off. Prynne also says, that while still an unsophisticated lad, he was beguiled. Deliver me from the young man who is always beguiled into wrong. Give me a man with back-bone enough to stand up under his own transgressions and courage enough to write his signature beneath the record of his sins! Upon several occasions he went to the play-house, and straightway conceived a most "complete abhorrence for all stage-players ever since." Now one disposed to be fair-minded would not attach great significance to the opinions of men formed in that period of life when impulse and prejudice are far more likely to sway the judgment than an inclusive knowledge of facts, a wide experience, and calm reflection! As to Prynne, I can only say, after wading through his book in the British Museum, that he appears to have been as consummate an idiot as ever found a publisher, and as ignorant a bigot as ever condemned an innocent pleasure for the enjoyment of which the acidity and the stupidity of his nature incapacitated him. It was in a spirit quite as bitter that the Long Parliament, in 1747, passed the Act condemnatory of all plays and players. Among other things this bit of amiable legislation set forth, "That all stage-players are hereby declared to be, and are and shall be taken to be rogues!" There is certainly no pleasing ambiguity about that sentence. The magistrates were authorized and instructed to pull down theatres and platforms erected for theatrical purposes, and were directed to apprehend and openly and publicly whip any stage-player found within their jurisdiction two months after the passage of the Act! It is related that in those days the number of debutantes was somewhat limited! The players went into exile, or were sheltered in the dwellings of the nobility, while some, to justify the title conferred upon them, took up in good earnest the pursuits of roguery. Now, what think you was the effect upon these sister forces of this strained and unnatural attitude of affairs? Undoubtedly it laid the foundation of the suspicion and antagonism between them which has existed ever since, and is not entirely dead yet. When one gentleman calls another gentleman an "inveterate gangrened ulcer," sets him down on his statute books as a "rogue," and makes pleasant little arrangements for his public whipping, the emotions of the party of the second part are not likely to be characterized by excessive warmth and tenderness. In brief, the Stage came to regard the Church as its natural and unrelenting foe, and fell into the attitude of the outcast Ishmael; while the Church, infuriated by the taste of blood, persevered in its enmity. This posture I hold was at once unnatural and unnecessary! But of that further on. Let me ask you to observe, that in what I have now said I have not attempted to describe the relations of the Church and the Stage in our time. The position of affairs to-day is this: theoretically the prejudice against the Stage is greatly weakened, practically it is almost extinct. There are still to be found traces of the ignorant bigotry which led Prynne to indiscriminately "abhor all stage-players." But I believe it is passing away. Let me tell a story. Something less than a year ago, I received a letter from a young lady resident in Kalamazoo, Mich.—though not, I have every reason to believe, an inmate of the insane asylum of that beautiful town. It was conceived in something like the following terms: "Sir:"—prudent young ladies invariably commence these little notes with "Sir," "plain Sir," as Bob Acres sets it down in his challenge to Captain Absolute—"I wish to go on the stage, and believing you to be a gentleman, etc., etc., etc., I write to ask for a place in your company. I know the stage is said to be surrounded with temptations, but, sir, I have lived here all my life, and, in my humble judgment, a girl who can meet and pass unscathed through the storms of Kalamazoo need never fear the perils of the dramaiti sea." Now I am not personally familiar with the peculiar temptations of Kalamazoo—it has impressed me on my brief visits as a place where a well-behaved girl might blossom into a noble womanhood, unmolested by the withering touch of vice—but my impression of the dramatic profession is that one strong for the battle of life in any other calling will find upon the Stage as little real peril and as much as our young friend—"the good girl of Kalamazoo"—found in the streets of her native town. Rational views touching the Stage and actors are gaining ground. A few eccentric ministers still utter annual tirades against them, but their congregations none the less go to the theatre. Nor is the prejudice against the Stage at all general among ministers themselves. The distinction of continuing the work commenced by Prynne and the Long Parliament is monopolized by a few ignorant bigots. I myself had the honour last autumn to enact the rôle of *Hamlet* to an audience, in which were no fewer than 29 ministers, all of whom had paid for their seats! The beretta which I wear as *Cardinal Richelieu* was taken off the head of a truly Catholic priest and placed in my hand to be used for the purpose; and at a city in the U.S. a generous-minded minister loaned his pulpit chairs to an inadequately-furnished theatre, for the purpose of setting a scene put down for "a room in the palace"! After all, Galileo was right, and the "world does move"! It gives me pleasure to make these statements: 1st, because they indicate the coming of a day when the preacher and the actor shall again work side by side in friendly rivalry; and 2nd, because, during experience on the stage, some of the kindest and warmest expressions which have come to me, were written by ministers. Here I naturally pass to a few words touching the ideal attitude of the Church and the Theatre as friendly forces, seeking a common end. Setting aside all partisan conceptions, I think we shall agree that in the broadest sense the Church is an institution intent upon the improvement of humanity. Whether it always holds this object in view, or whether it chooses the most direct and effective methods to accomplish it, are questions with which I have no present concern. When we say that the Church is an institution whose end is the improvement of humanity, we have uttered a definition sufficiently broad to include the hierarchy presided over by Leo XIII., and that Church of the future, about which some of us have dreamed at no inconsiderable cost to ourselves. The drama, on the other hand, is an institution susceptible of a duplex definition. It aims to amuse, as well as to instruct. Ask nine men out of ten why they go to the theatre, and the answer will be "for amusement"! And yet if you question further, you will find that with amusement they drink in instruction and inspiration, that enthusiasm is awakened and tender sentiment stirred to its depths. Prof. Blackie is credited with saying:—"I have much oftener felt the tear drops of human sympathy and devout pity drawn from my eyes by the vivid impersonation of the Stage, than by the most fervid appeals of eloquence ever delivered from a pulpit." And if men are made better, as their better sympathies are aroused, as pity is awakened for the weak, charity for the fallen, scorn for the wrongdoer, and admiration for the heroic, why should not the stage be counted in as an educative and ennobling agency in our modern life? I do not, by any means, wish to eliminate from the drama its function to amuse. Amusement is as necessary as religion. It is the safety-valve of the nineteenth century. Shut up the theatres, and you must build more mad-houses. I see before me men engaged in the mad pursuit of wealth, which is at once the bane and the blessing of our age. They toil early and late. They carry credit out of all proportion to their capital. The first of the month is to many of them what the Ides of March was to Cæsar. Their brains seethe and whirl from morning till night, too often that sleep

"Which knits up the ravell'd sleeve of care,"

refuses its benediction to their fevered thoughits. To such men—and there are many of them—what an infinite blessing is the self-forgetfulness which the lightsome mirth of the mimic stage begets. It satisfies and recuperates them as no sermon could do; it nerves them again for the battle of life as no philosophy, no moralizing could equip them. Who then will deny the title of public benefactor to the pains-taking actor who does indeed "With some sweet oblivious antidote cleanse the stuffed bosom of that perilous grief which weighs upon the heart?" The claim which I wish to set forth on behalf of the Stage, however, is this, that it is fitted to unite the qualities of the entertainer and instructor. I do not say that it always does this, nor that it always seeks to do it. The stage is as far from ideal conditions as the pulpit. Both, in my judgment, are too much circumscribed by the authority of tradition. The Church no more than the Stage! Awed by the voice of tradition, the preacher dreads to expose his ecclesiastical dogmas and forms to the keen illumination of modern thought. The actor, slavishly yielding to the same influence, treads in the old ruts of other days, and makes no real advance in his art. When now and then a man of original force arises, who infuses the old forms of the past with the glowing impulses of the present, we see him rise far above his fellows, alike in usefulness and prosperity. I speak then of the Stage, not as it is, but as it might be. And I say it is capable of becoming as potent a factor for good in our modern life as any institution that can be named. Compare with it the work of either painter, sculptor, writer, pleader, preacher, and I am not inclined to qualify this remark. Does the painter or the sculptor elevate and refine the æsthetic sensibilities of the beholder by graceful lines, the artistic fusion of colours, the skilful selection of tender and heroic subjects? Surely. But what does the Stage? It gives you pose, colour, romantic and heroic subjects, and, susperadded to all these, the human element which crowns and glorifies the whole. Mr. John Gilbert, in his contribution to the symposium which I just now mentioned, says rather complainingly: "The theatre has become a picture gallery. The actor is thrust into the background. The aim of the manager is to please the eye, not to enchant the ear." To my mind this is one of the charms of the Stage. I do not fear that acting of ability will ever be suppressed by spectacular beauty and archæological correctness. The voice of the lark loses no charm to me because its song is trilled above a smiling landscape! Let the Stage be a picture gallery, full of the choicest works of art, and in it let us witness men and women like ourselves enacting those scenes which shall inspire us with admiration for the beautiful and disgust for the evil.

Again: Does the writer wield an influence second to none but that of the orator? Why, then,

Digitized by Google

the actor lays writer and orator under tribute to his art. I know that the play-writer often forgets the dignity of his calling; but commencing with Shakespeare—still and easily, the intellectual monarch of the race—and including Johnson, Sheridan, Bulwer, and a host of others, the English Stage has produced a royal literature. But the chief excellence of the Stage is that it gives artistic expression to ennobling sentiments, coupling with harmonious sound and graceful actions, ideas worthy of both. One of the old Greek comedians has beautifully said :—

"Whensoe'er a man observes his fellow
Bear wrongs more grievous than himself has known
More easily he bears his own misfortunes."

To furnish spectacles of heroic endurance, of truth at last victorious over falsehood, of virtue triumphant over vice, of motherly affection persisting in spite of all discouragements, of the true man and good finally outwitting and defeating the scheming villain, is the peculiar province of the Theatre. And I believe that such sights serve to inspire men to strive against odds, to resist temptation, to despise craft and cruelty, and admire truth, honour, manliness. Mr. George Augustus Sala said not long ago: "He had always maintained that the drama should be considered not merely as an amusement or recreation, but as a distinctly educational and moral agency—a view which was supported by the fact that the 'gallery' always applauded every good, honest, and moral maxim that was enunciated on the stage." I am sure you have all noticed the same thing. No long ago I went to an English theatre to witness a performance of the "Silver King." The best actor in the cast was the "heavy villain," a character made by the author thoroughly detestable. At the close of the act, the audience honoured the performers with a recall. As one after another crossed from side to side, the audience applauded each good-naturedly; till the villain appeared, and was greeted with a storm of hisses. He smiled and smiled, and bowed and bowed, but the audience evidently bearing in mind the couplet,

"A man may smile and smile, and be a villain still,"

refused to endorse the villainy which it was his ill fortune to represent. In the same piece a mother illustrates the beauty of maternal endurance and affection, and although her lines were mediocre, and her action not particularly brilliant, she was received by the audience with rapturous applause. But if you recall your own experience in the Theatre, will it not witness to the same truth? Who ever sided with *Shylock* against *Antonio*; with *Iago* against *Othello*; with *Don John* against *Claudio*; or with *Wolsey* against the unfortunate *Catharine*? The representative of truth, of filial love, of righteous anger, secures our applause. It is *Hamlet*, the sadly mysterious and fated prince, struggling against the odds of fate—not the perfidious *Claudius* that wins our sympathy. Oh! who has not wept with *Othello* in the agony of his anguish; or felt his heart touched to the quick by the terrible loneliness of *King Lear*; or looked compassionately upon the struggle of *Macbeth*; or felt his blood leap again as Bulwer's old hero exclaims in answer to the question of *Louis*, "Where will they be next week?"

"There at my feet!"

defeating at a single stroke the perfidious *Baradas* and winning the life of *Julie's Mauprat*? And if you will suffer still another illustration of the potent influence of dramatic action, I would cite Mr. W. G. Wills' play "of Charles I." as a most conclusive proof. It takes the strangest liberty with history. *Cromwell* is pictured as a knave and a hypocrite, *Charles* as next door to a glorified saint. The first, who is popularly supposed to have combined a robust patriotism with unselfish devotion to principle, is set forth as a trickster, a liar, an accidental tyrant. The latter, who—if history speaks truly—never sacrificed a good opportunity to a passion for veracity, nor forgot his own interests in those of his friends, is pictured as a martyr to honour, to personal loyalty, and true kingliness of nature. Thus you observe the dramatist has employed his art to reverse the facts of history. But so skilfully has he done his work, that you leave the Theatre in a painful daze as to the real qualities of *Charles Stuart* and the grim *Protector*. If then the Stage can so successfully disguise error and make it appear as truth, how potent it must be when all its fascinations are linked to the natural charms of truth! To be sure this illustration proves the dangers attendant upon a false use of dramatic art. But the same is true of every other social force. The grossest frauds are those committed under the forms of law. The greatest barbarities are those which bear the signature of religion. How easily fervour runs into bigotry, bigotry into fanaticism, fanaticism into cruelty, till at last in the name of Christ—the gentle one of Nazareth—the Inquisition rears its ghastly head. It is true that a potency for great evil resides in dramatic art; but the aim of all good men should be to guide it into channels of usefulness. And the Church, instead of antagonizing, should again renew its early relationship with the Stage, and by wise counsels direct its literature, elevate its standards, purify its performances, and ennoble its performers. I look forward toward a time—perhaps I am sanguine—when the Church shall have altogether ceased its opposition to the Stage; to a time when the Church shall have given up all defence of its own past follies, and the Stage renounced the idea of defending the black spots in its history; to a time when preacher and actor shall say, when I was a child I spake as a child, I thought as a child, I understood as a child; but when I became a man, I put aside childish things. In that day, the candle upon the altar and the footlight of the Stage shall mingle their friendly light to illuminate the pathways of human experience. Then all true men will join with an ennobled public sentiment and declare:

"Honour and shame from no condition rise;
Act well thy part,—there all the honour lies."

## *LETTER FROM SHIMANE.*

(From our own Correspondent.)

Matsue, May 29th.

The departure of Governor Koteda last Sunday for his new post at Niigata was an event such as Matsue rarely witnesses. It is no exaggeration to say that the whole population turned out to bid their much-loved prefect farewell. Immense crowds lined the river banks and the bridge; and all windows and roofs commanding the river side were occupied by spectators. The most noteworthy fact was the silence of the multitude; there was scarcely a sound to be heard until the moment when the steamer began to move, when all the people burst into a cheer, and continued to cheer until the vessel passed out of sight on its way to Mionoseki. A party of gentlemen followed in another steamer to escort the Governor as far as the first day's stage of his long journey.

I paid several visits recently to the settlement of an outcast class, known in Matsue as *Yama-no-mono*. This settlement is at the southern end of Matsue, in a tiny valley behind the ring of hills which form a half-circle behind the city almost exactly in the same way as Yokohama is partly surrounded by a demi lune of hills. The sea at Yokohama, completing the city's boundary, has its counter-part here in the sea-like lake called Shinjiko. Few Japanese of the better classes have ever visited such a village—much less numbers of the middle class, in whom caste prejudice is always, in all countries, far stronger than among the aristocracy. The idea of defilement, both moral and physical, attaches too strongly to the mere name of *Yama-no-mono*. Although the settlement is within half an hour's walk from the heart of the city, there are not perhaps half-a-dozen of the thirty-odd thousand citizens of the town who have ever even seen it. There are four outcast classes in the town of Matsue and its environs;—the *Hachiya*, the *Koya-no mono*, the *Yama-no-mono* and the *Eta*, whose principal settlement is at Suguta. There are two settlements of *Hachiya*. These were formerly the public executioners, and served under the police in various capacities. Although by ancient law the lowest class of pariahs, their intelligence was sufficiently cultivated by police service and by contact with superiors, to elevate them in popular opinion above the other outcasts. They are now manufacturers of bamboo cages and baskets. They are said to be descendants of the family and retainers of Taira-no-Masakado-Heishino, the only man in Japan who ever seriously conspired to seize the imperial crown by armed force, and who was killed by the famous general Taira-no-Sadamori.

The *Koya-no-Mono* are slaughterers and dealers in hides. They are never allowed to enter any house in Matsue except the shop of a dealer in *geta* and other foot gear. Originally vagrants, they were permanently settled in Matsue by some famous Daimyo, who built for them small houses *Koya*—on the bank of the canal. Hence their name. As for the *Etas* proper, their conditions and calling are too familiar to need any remarks from me.

The *Yama-no Mono* are so called because they live among the hills (*yama*) at the southern end of Matsue. They have a monopoly of the rag-and-waste paper business; and are buyers of all sorts of refuse, from old bottles to broken-down machinery. Some of them are rich. Indeed, the whole class is, compared with other outcast classes, prosperous. Nevertheless, public prejudice is still strong against them, almost as strong perhaps as in the years previous to the abrogation of the special laws concerning them. Under no conceivable circumstances could any of them obtain employment as servants. Their prettiest girls in old times often became *joro*; but at no time could they enter a *joroya* in any neighbouring city, much less in their own, so they were sold to establishments in remote places. A *yama no mono* to-day could not even become a *kurumaya*. He could not obtain employment as a common labourer in any capacity, except by going to some distant city where he could conceal his origin. But if detected under such conditions he would run serious risk of being killed. In ancient times, I am told, such men actually were killed by their comrade-labourers. Under any circumstances it would be difficult for a *yama-no-mono* to pass himself off for a *heimin*. Centuries of isolation and prejudice have fixed and moulded the manners of the class in recognizable ways; and even its language has become a special and curious dialect. That strange physiological law—exemplified remarkably in the history of the West Indian half-breeds, and in the history, too, of gipsies and of Jews,—whereby the beauty of the women of a persecuted or oppressed race is developed as a protest of Nature itself against prejudice, is said to hold good in the case of the outcast classes of Japan. Mitford has given us an English version of one tradition of beauty among the *Eta*; and Japanese literature contains many such. As for the *yama-no mono*, I have also heard that remarkable beauty is not uncommon among their young women. Indeed the fact that in former days many of these were sold to *joroya*, would appear to confirm the statement.

I was anxious to see something of a class so singularly situated and specialized; and I had the good fortune to meet a Japanese gentleman who, although belonging to the highest class of Matsue, was kind enough to agree to accompany to their village, where he had never been himself. But on our way thither he told me many curious things about the *yama-no-mono*. In feudal times these people had always been kindly treated by the *samurai*; and they were often allowed or invited to enter the courts of *samurai* dwellings to sing and dance, for which performances they were generously paid. The songs and the dances with which they were able to entertain even those aristocratic families were known to no other people, and were called *Daikoku-mai*. The singing of the *Daikoku-mai* was, in fact, the special hereditary art of the *yama-no-mono*; and represented their highest comprehension of esthetic and emotional matters. In former times they could not obtain admittance to a respectable theatre; and, like the *hachiya*, had theatres of their own. It would be interesting, my friend added, to learn the origin of their songs and their dances. For their songs are not in their own special dialect, but in beautiful quaint Japanese. And that they should be able to preserve this oral literature without deterioration is all the more remarkable for the fact that they are at present unable to benefit by the new educational opportunities afforded to the masses. Prejudice is still too strong to render it possible for their children to be happy in a public school. One might suppose a small special school possible; but there would be no small difficulty in obtaining willing teachers for it.

The *yama-no-mono* village lies in a hollow behind the hill on which the superb Zen temple, called Tokoji, stands, at the southern end of Matsue. Behind the temple is a cemetery, and behind the cemetery the village. It has its little Shinto temple. I was extremely surprised at the aspect of the place; for I had expected to see a good deal of ugliness and filth. On the contrary, I saw a multitude of neat dwellings, with pretty little gardens about them, and pictures on the walls of the rooms. There were many trees; the village was green with shrubs and plants, and picturesque to an extreme degree; for, owing to the irregularity of the ground, the tiny streets climbed up and down hill at all sorts of angles, the loftiest street being fifty or sixty feet about the lowermost. A large public bath house and a public laundry bore evidence that the *yama-no-mono* love clean linen as well as their *heimin* neighbours on the other side of the hill.

A crowd soon gathered to look at the two visitors who had come to their village—a rare event for them. The faces about me seemed much like the faces of the *heimin*, except that I fancied the ugly ones were much uglier, making the pretty ones appear more pretty by contrast. There were one or two sinister faces,—recalling faces of gipsies that I had seen;—while some little girls, on the other hand, had remarkably pleasing soft features. There were no exchanges of civilities as upon meeting *heimin*;—a Japanese of the better class would as soon think taking off his hat to a *yama-no-mono* as a West-Indian planter would think of bowing to a negro. The *yama-no-mono* themselves show by their attitude that they expected no forms, and they pay no greeting. Not the men at least; some of the women, on being addres-

Digitized by Google

sed, made a very gracious obeisance, and thanked my companion for certain kindness as nicely as any of the common people could have done. Other women—wearing coarse straw sandals (an inferior quality of *Zori*)—would answer only "yes" or "no" to questions, and seemed to be suspicious of us. My friend also called my attention to the fact that the women dress differently from other Japanese women of the lower classes. For example, even among the very poorest *heimin* there are certain accepted laws of costume; there are certain colours which may or may not be worn according to the age of the person. But even elderly women among these people wear *obi* of bright red or variegated hues, and *kimono* of a showy tint. Those of the women seen in the city streets, selling or buying, are the elders only. The younger stay at home. The elderly women always go into town with large baskets of a peculiar shape, by which the fact that they are *yama-no-mono* is at once known. Numbers of these baskets were visible—principally at the doors of the smaller dwellings. They are usually carried on the back, and are used to contain all that the *yama-no-mono* buy:—old paper, old wearing apparel, bottles, broken glass, and scrap-metal.

A kindly-faced middle-aged woman at last ventured to invite us to her house, to look at some old coloured prints she wished to sell. Thither we went; and were as nicely received as in a *heimin* residence. The pictures—including a number of prints by Hieroshige, proved to be worth buying; and my friend then asked if we could have the pleasure of hearing the *Daikoku-mai*. To my great satisfaction the proposal was joyfully received; and on our agreeing to pay a trifle to each singer, a small band of neat-looking young girls whom we had not seen before, suddenly made their appearance, and prepared to sing while an old woman made ready to dance. Both the old woman and the girls provided themselves with curious instruments for the performance. One or two had instruments shaped like mallets, made of paper and bamboo; these might be intended to represent the hammer of *Daikoku*; they are held in the left hand, a fan being waved in the right. Other girls were provided with a kind of castanets,—two flat pieces of hard dark wood, connected by a string, and sounded by rapid tapping with the fingers. Six formed in a line before the house. The faces of all were both pleasing and characteristic. The old woman took her place facing the girls, holding in her hands two little sticks,—one stick being notched all along its length. By drawing it rapidly across the other stick, a curious rattling noise is made.

The old women rubbed her little sticks together; and, from the throats of the three girls on the right, ranged out a clear sweet burst of soprano song totally different from anything I had ever heard in Japan before; while the three castanets made one measured clattering, keeping exact time to the syllabification of the words, very rapidly uttered. When these three had sung, alone, what I supposed to be the first verse, the voice of the other three women, deeper, but equally sweet, suddenly joined in, producing a delicious harmony; and a kind of burthen was chanted by all in unison. Then the three sopranos began again alone another verse; and the first performance was reiterated. In the meanwhile, the old woman was dancing a very fantastic dance, which elicited hearty laughter from the crowd, and occasionally chanting a few comic words.

The song was not comic, however, itself; but a very pathetic ballad entitled *Yaoya-O-Shichi*. Yaoya O Shichi was a beautiful girl who, many hundred years ago in Kyoto, set fire to her own house in order to obtain another meeting with her lover, residing in a temple where she expected that her family would be obliged to take refuge after the fire. But being detected and convicted of the terrible crime of arson, she was condemned by the severe laws of that age to be burnt alive. The sentence was carried into effect; but the youth and beauty of the victim, and the motive of her offence, evoked a sympathy in the popular heart which found later expression in song and drama.

While singing, none of the performers, except the old woman, lifted their feet from the ground—only slightly swaying their bodies in time to the song. It lasted more than one hour—during which the voices never failed in their sweet fresh quality; and yet so far from being weary of it, and although I could not understand a word uttered, I felt very sorry when it was all over. One could listen to such singing all day. Certainly no singing I ever heard from the *geisha* could compare in charm with this simple ballad-singing of a despised outcast class. And with the pleasure of it, there came to the foreign listener also a strong sense of sympathy for the young singers—victims of a prejudice so ancient that its origin is no longer known—and that pity which is said to be akin to a stronger and better feeling than mere compassion.

## *THE "EMPRESS OF INDIA" SPECIAL.*

[From our own Correspondent.]

May 7th.

I closed my letter very suddenly, just as we reached Vancouver, and must now go back a little. When we arrived at Victoria, we were promptly visited by President Van Horne, other officials of the Canadian Pacific, and friends, all of whom had come to meet the *Empress of India*, and welcome her first arrival in American waters. A little later a committee of Victoria gentlemen and ladies, headed by the Mayor, came on board, and presented the vessel with a beautiful punch bowl. We also found that every arrangement had been made to facilitate our departure from Vancouver by rail. Mr. Brown, the courteous ticket agent of Vancouver, was on board from Victoria, and was thus enabled to fill out all the railroad tickets. When, about 3 p.m., we reached Vancouver, we were welcomed by about the entire population, who had assembled, in the drizzling rain, to greet the first *Empress*. Three hours only were consumed in transferring the baggage and silk from the steamer to the special train; so that, at 6 p.m. of Tuesday, April 28th, we were enabled to leave the Vancouver station on the "time-breaker."

The party of 130 saloon passengers had been gradually breaking up. Some left at Victoria, either to see the place, or to go thence into the States; a very large number remained at Vancouver for similar purposes: so that less than 40 availed themselves of the privilege of the "special." This was called the "Empress of India Special," and consisted, besides engine, tender, and baggage car, of two sleepers of tourists, an observation car, and the two cars of President Van Horne and his party.

In the darkness of the first night, we missed the grand and terrible scenery of the Fraser River Cañon, through which we sped at sach a rate that it actually seemed as if we were still "rocked in the cradle of the deep" by a fierce gale. Indeed, the president's private car at the very end of the train wobbled about so violently, that it looked like breaking, not merely the record, but also a good many necks; and the president finally had to instruct the engineer to slacken the pace!

The following day (April 29), from early morn till late in the evening, we enjoyed the unparalleled magnificent scenery of the Selkirks and the Rockies. During this day we travelled more slowly, in order that we might "take in" the view from all sides. We even stopped at certain special points: and we thoroughly enjoyed the different meals at the charming little hotels nestling in the mountains. That one day, replete with grand and awful views of the beauties of God's creation, will not soon fade away from the memory of those tourists.

When we awoke on Friday morning, April 30th, we found that we had left the mountains behind, and were to have a day's run on the prairie. The 900 miles from Calgary to Winnipeg were covered in 24 hours; and part of the way 50 miles or more were made in one hour. At all the large stations crowds were gathered to cheer the "time-breaker," and to gaze with awe-struck countenances at the people who were girdling the globe. One enterprising newspaper man of Brandon, Manitoba, boarded the train in the morning, interviewed various passengers, and at every stop telegraphed ahead his items of news: so that, when we reached Brandon about 6 p.m., we found news-boys selling the "extra" of the *Brandon Sun*, containing several columns about

THE GLOBE TROTTERS.
THE TIME-BREAKER NOW ON ITS WAY ACROSS THE CONTINENT.
LIST OF THE PASSENGERS.

About 11 o'clock of Friday evening (April 30), we reached Winnipeg. Here six of us alighted, and had great difficulty in *forcing* our way through the crowd on the platform. The "special" kept on at a high rate of speed, and made Montreal in only four days from Vancouver. I have since then lost track of the "time-breaking" record, but I doubt not that you have been duly informed of the date when the silk reached New York. As your correspondent stopped over twice on the way, it is not important to give a time-table of his trip: but his baggage, which came through without a stop, took only 16 days from Yokohama to Beaver Dam, Wis. (near Milwaukee). Moreover, a Chicago young man expected, by schedule time, to reach his home Saturday night (May 2), which, as there was an extra day picked up at the 108th meridian, makes just 16 days. Everybody, like Dominie Sampson, ejaculates "Prodigious!"

* * * * *

Our "homeward-bound" has now become "home again;" while "home as found" given both pleasure and sorrow. We have not been able as yet to "post up" on the drift of current events, of which we somewhat lost track during our journeying. We fear, however, that another "strike epidemic" has set in, and may cause financial distress. In this little manufacturing town of 5,000 inhabitants the cotton and woollen factories are just barely running with only a few hands, and may eventually be compelled to close. Such action would practically kill the place. Here and there throughout the country working men of various occupations are on a strike. There is no doubt that the question of the relations between employer and employed is a vital subject; that employed have manifold grievances; but that employers likewise have important rights, and that "striking" is productive, in general, of much more harm than good to business interests.

## *LETTER FROM BOSTON.*

(From our own Correspondent.)

Boston, May 13th.

Several threads dropped in the last letter must be taken up in this. Secretary Blaine wrote in his letter to the Marquis Rudini, Prime Minister of Italy, that the claims of the Italians killed in New Orleans would be referred to Congress for consideration if it should appear that they had come to this country without violating the immigration laws, and had lived here in peace of the United States. It is not living in peace to commit perjury and to violate the election laws, and it appears that the slain Italians were guilty of these offences. It is reported that the Italian consul in New Orleans now admits that the victims of the massacre, had registered and voted in Louisiana, but he claims that they were ignorant of the significance of their acts, and did not intend to relinquish their Italian citizenship. The Marquis Rudini finds fault with Secretary Blaine. He writes to the Marquis Imperiali in Washington:—"I have now before me a note addressed to you by Secretary Blaine, April 14th. Its perusal produces a most painful impression upon me. I will not stop to lay stress upon the lack of conformity with diplomatic usages displayed in making use, as Mr. Blaine did, of a part of a telegram of mine communicated to him in strict confidence, in order to get rid of a question clearly defined in our official documents, which alone possess a diplomatic value." Secretary Blaine replies:—"The intimation of the Marquis Rudini that the telegram in question was delivered in strict confidence is a total error. As the telegram expressed the demand of the Italian Government, it was impossible to transmit it in strict confidence. As already stated, it was communicated to me in person by Baron Fava, written in English, in his own handwriting without a suggestion of privacy, and the telegram has not a single mark upon it denoting a confidential character."

M. Roustan, the French Minister, who has represented the French Republic in Washington for several years, has been transferred to a similar post in Madrid. It is reported that before leaving for his new post of duty, the French Minister may marry Miss Patton, daughter of a wealthy miner, who has had large possessions here and elsewhere. Count de Montholm, who is to be transferred from Athens to Washington to succeed M. Roustan, is well known in Washington as a man of marked ability.

General Grant's birthday was on the 25th of April. As the 25th came on Sunday, the corner stone of the Grant monument in Riverside Park, New York City, was laid on the 26th. The Army and the Navy, and the Grand Army of the Republic were represented by large delegations, and many prominent officials. The corner stone is laid, but the funds to build the monument have not yet been secured.

Attention is called to the projected World's Fair in Chicago in 1893 by a little quarrel among the lady managers. A high official has been asked or expected to resign, but she will not, and holds the fort in her office. She has appealed to the authorities at Washington having in charge the government appropriation for the fair. It is quite a picnic all around, and has many humorous features. It advertises the fair the World's Fair and some of Chicago's fair—ones, manifestly unfair here and there. But the World's Fair does not trouble the people much yet. When the time comes they will grapple with it and give it all the attention it requires.

General Blair was appointed minister to China, and was on his way, in Chicago, to the Pacific coast to sail for his post of duty when the Chinese Government informed the United States Government that it would not accept the General, owing, it is supposed to the part (legislative) he

Digitized by Google

has taken in excluding the Chinese from this country. A telegram from Secretary Blaine caused General Blair to turn back. It is reported that General Blair will be transferred to the Japanese mission, but definite action will not be taken till the President returns from his western trip. The *Boston Journal* remarks that probably Blair would be acceptable to Japan as China and Japan have "antagonistic interests; what would be disagreeable to China, would be agreeable to Japan. The *Journal* says further that General Grant by his "wise mediation" saved China and Japan from going to war with each other.

The ejectment of General Butler from the United States Court at the order of Judge Carpenter, referred to in the last letter, has elicited indignant protest throughout the country. General Butler's enemies, even, declare in his favour. The General Court of Massachusets has moved in the matter, and General Butler is not idle or slow if he be more than three score and ten. Judge Nelson has already granted Butler a writ of error. An important fact in the case is that Butler's client was sentenced after he (Butler) had been removed, and was thus denied assistance of counsel.

From Boston to Denver, the people are discussing the position of the Widow Barnaby, widow of J. B. Barnaby, the millionaire clothier of Providence, R.I. At Mr. Barnaby's death, Mrs. Barnaby received by will $2,500 a year. Dissatisfied, she broke the will, or sued to break, and by compromise, received about $100,000. Her medical adviser was a Dr. Graves of Providence, R.I., who became Mrs. Barnaby's business agent, and was given power of attorney. Mrs. Barnaby was in Denver at the time of her death. Dr. Graves had been accustomed to send her medicine by mail. One day she received a bottle containing whisky, according to the label, from some one unknown. Mrs. Barnaby and a companion drank, and Mrs. Barnaby died. By analysis the bottle was found to contain an aromatic solution in which was arsenic enough to kill thirty persons. The question is, who sent the bottle. A will in the possession of Graves gave him $25,000. Others were remembered by generous amounts. The details of the case read like those in a novel, a new chapter every day with new characters in the plot. Sensational developments are expected. No criminal case has excited wider interest for a long time.

Since the foregoing in regard to the Italian affair was written, the New Orleans grand jury has made its report. It refers to the "suspicious conduct" of the jury that failed to convict the Italians; to bribery; to the work of hired agents of corruption; to the Mafia; to dishonest sheriffs; to the "shameful combination of detectives, perjurers, black-mailers, suborners, and jury-tamperers," but brings in no indictment—finds no one guilty. The report is not satisfactory to Americans, at least to Americans who are outside of "Vigilance-committee" region, or north of Mason and Dixon's line, and has of course caused much unfavorable comment abroad. The reputable, law-abiding citizen does not recognize the right of any man or men to commit murder, however great the provocation may be.

George Francis Train, "Citizen," is about to start on another trip around the world. If he calls on Japan, do not be alarmed; he is harmless. It is reported that he will stop long enough in Italy to shake the Marquis Rudini out of his boots, and possibly to wipe out the entire Italian monarchy. If he does anything to cause his retention and permanent caging, Italy will confer a favour on the United States by keeping him. Indeed, it is hoped he may venture into Italy and open his mouth.

An inoffensive citizen of Massachusetts, in Florence, has been mobbed because he is an American. A consul of the United States in Italy has reported that travelling in Italy is unsafe owing to the brigands. From which it may appear that if any American wishes to go to Italy to stay, dead or alive, now is the time. May Citizen Train make haste!

In several states there is a movement on foot to put an end to a class of societies, called "insurance," "speculative," "beneficial endowment," etc. Twenty-one have been suppressed in the city of Philadelphia alone. The plan of these societies may all differ, but here is one:—Fifty men "organize," and pay into the treasury two dollars a week for twenty weeks, or forty dollars. Then the first to join draws out $100; the next week the second to join draws $100, and thus on. Meanwhile new and old members are paying into the treasury two dollars a week. The early drawers get $100 for $40, but what will the late or last ones get?

A Chilian man-of-war has violated the neutrality laws by entering a Californian port for arms and supplies. She was ordered to be detained by the United States Government. Full particulars will be given probably by your correspondent in San Francisco. It is believed that the civil war in Chili is aided in New York city. Two rival houses, a member of one of which is Ex-Mayor Grace, are said to be "powerful factors in the fight." One or both, probably both of the firms have sent consignments of arms to Chili. A member of the Chilian congress has been in New York, and has bought arms for the congress-party. It is reported that the attempt of Balmaceda to have the foreign consuls and ministers interfere in the affairs of Chili originated in New York.

## *LETTER FROM MILWAUKEE.*

(From our own Correspondent.)

Milwaukee, May 15th.

The fears which I expressed in my last letter concerning a "strike epidemic" have fortunately not yet been realized. Strikes are still "on" here and there in many parts of the United States, and are causing more or less damage to business; but they have not yet become general. In some localities the employers have been beaten, and have been unable to resume work without acceding to the demands of the employés. In other places the employers by their firmness have won the day. In one town in Wisconsin girls and young ladies of the best families have gone to work in a woollen mill to tide over the strike. There does not seem to be so much inclination as usual on the part of the strikers to resort to violence to keep others from working in their stead. Intimidation is, however, practised in the manner indicated by the following advertisements:—

ATTENTION—THE PUBLIC IS HEREBY NOTIFIED that the "Illinois Staats Zeitung" is declared a non-union office by the German "Typographia No. 9," branch of American Federation of Labour. By order of TYPOGRAPHIA No. 9.

PLUMBERS—ALL PLUMBERS, STEAM AND GAS FITters should keep away from Dubuque; strike going on.
HUGH McCARTEN, Rec. Sec. of Union.

PLUMBERS—TO STAY AWAY FROM MILWAUKEE ON account of lock-out. E. MUELLER, Secy.

The Lake regions, the Ohio, upper Mississippi and Missouri valleys, and other portions of the country were visited during the night of May 6th and 7th with severe frosts. It was feared that wheat and fruit had been badly damaged; but it has since been reported from various quarters, especially from the "wheat belt," that there is a good outlook for a big crop. According to reports received from the Red River Valley district, the crop of this year will exceed that of 1887, which was fine.

The other day I ran accross an item which may be of interest to sericulturists and silk merchants in Japan. One Elias Khouri, nephew of Mousa Khouri, of Damascus, has lately arrived in New York City. Mousa Khouri, it seems, having "dissected a silk worm and found the stomach to contain the fibres of leaves and twigs of the mulberry tree * * * decided that silk could be produced without the silk worm, and evolved a process for manufacturing directly from the leaves and twigs." A colony is shortly to be started in Georgia, where silk will be made.

Inasmuch as Japan was favoured a short time ago with a visit from Col. Olcott, the great preacher of "Theosophy," or "Esoteric Buddhism," it may not be out of place to mention here Mme. Blavatsky, of whose death, I presume, you were duly advised by telegram. Not being personally acquainted with her doctrines and her work, I am compelled to quote, and accordingly insert here two clippings, which give different views:—

Mme. Blavatsky probably did much good during her active life. She certainly did much to promote the study of oriental religions, parts of which she adopted and adapted into her system of theosophy. The theosophical societies, especially those of London, have by no means confined themselves to theories, but have done much to relieve the poor and to promote right living.

Mme. Blavatsky's system of "theosophy" is a perfect crazy-quilt, made up of patches from Neo-Platonists, Kabbalists, Paracelsus, and J. Boehme, flavoured with all the wonders of the magi, the elixirs of life, the Eleusinian mysteries, and the phenomena of mesmerism, hypnotism, psychometry, psychism, mysticism, and esoteric buddhism. The line of membership in the noble army of seers enrolled by Maedame Blavatsky extends from Adam, the first adept, to Edison, the last.

It might be added, that some say the real Mm. Blavatsky died years ago, while others claim that she is not dead even now. This mysterious doubt concerning death probably has some connection with the theosophic ideas of the "astral self."

Among the graduates of the Garrett Biblical Institute, a theological school of the American Methodist Episcopal Church, at Evanston, Ill., may be found Mr. E. Asada, whose subject at the commencement exercises yesterday was "The New Orient."

Rev. Phillips Brooks, the eloquent Episcopal clergyman of Boston, has been elected to the bishopric of Massachusetts, and has accepted the position. The High Church party strenuously opposed his election; but the Low Church element supported him heartily. Christians of all denominations rejoice in the election of so intelligent, talented, liberal, and eloquent a man, whose influence and reputation have been more than local.

The Y.M.C.A. international convention, which met at Kansas City, voted for the observance of the second Sabbath in November as a day of praise and thanksgiving, and resolved on an appropriation yearly of $75,000 for the international work. After a lengthy discussion the following resolution was adopted: "That the test of active membership in all foreign associations be the same as the Portland test, under which American associations are organized." I must confess my ignorance of what "the famous Portland test" is; but I presume that some Y.M.C.A. worker in Japan will be kind enough to supply your columns with an explanation.

It will be a matter of interest, not merely to Presbyterians, but to many other persons, Christians or not Christians, to know, that Rev. Dr. Briggs, of the Union Theological Seminary, New York City, is to be tried for heresy. This proves likely to be one of the most important trials since that of Dr. David Swing, of Chicago.

The dailies of May 13th contained dispatches concerning the attempt made at Otsu, near Kyoto, to assassinate the Czarewitch. It was startling news, of course, and yet not so surprising to those cognizant of the fact, that disreputable attempts had been made in some Japanese journals to arouse suspicion as to the object of the visit of the Czarewitch.

San Francisco, May 10th.—Funeral services over the remains of John F. Swift, United States Minister to Japan, were held at Trinity Church this afternoon. The services were conducted by Rev. J. Sanders Reed and were attended by the army and navy officers, regents of the state university, the governor's staff and the masonic lodges. After the reading of the funeral service of the episcopal church the remains were escorted to the Masonic cemetery by the Second Brigade, N. G. C., where they were turned over to the members of the California lodge, F. and A. M., which conducted the burial services.

It is possible, that the mission to Japan will be given to ex-Sen. Henry W. Blair, of New Hampshire. He was appointed Minister to China; but, on account of some radical views expressed by him concerning the Chinese, he was *persona non grata* in that Empire, and was recalled by President Harrison, after he had started for his post. I can see no reason why he should not be acceptable in Japan.

The census of 1890 has again proven the truth of Bishop Berkely's statement about the direction which "the course of Empire" is taking. In 1880 the centre of population in the United States was not far from the city of Cincinnati, Ohio. Since then it has been gradually moving still further "westward" till it is now located at a place called Grunsburg, in Southern Indiana. At this spot the enterprising *Chicago Herald* a two-cent daily, has erected a monument, and this journal intends in the same manner "to make the centre of population regularly hereafter." In the coming centuries "these mile-stones of progress" will likely become interesting relics to the antiquarian.

The University of Pennsylvania has taken the initiative in establishing a professorship of statistics, with Dr. Roland P. Falkner in the chair.

This evening in the Central Music Hall, Chicago, Hon. Ignatius Donnelley, of Minnesota, will affirm, and Prof. John C. Freeman of the University of Wisconsin, will deny, that Bacon wrote Shakespeare's plays.

The imbroglio with Italy is approaching a settlement. Signor P. Corte, the Italian Consul in New Orleans, addressed the grand jury a long letter, in which he asserted that his statements on the Mafia case had been purposely distorted. The grand jury officially replied, that they found the tenor of the communication "not consistent with the official dignity of this body," and returned the document. Consul Corte has also been recalled by the Italian Government; and Cesare Poma, now Consul at Boston, has been appointed in his stead. It was one day reported that Italy was trying to obtain "the moral support" of the triple alliance in her position in this matter; but the next day this report was "denied on official authority" from Rome. Whatever may have been technically right in this affair, the good name of the United States has not escaped unstained. It is decidedly unfortunate and disgraceful that the jury system is becoming unsatisfactory and lynch law so prevalent.

But we are likely now to get into trouble with the Government of Chili. A privateer, named the *Itata*, called at San Diego, to get some rifles and ammunition evidently intended for the Chilean insurgents. Having thus violated the laws of neutrality she was "seized" by a United States Marshal, but very coolly proceeded on her way with that officer on board! The affair was a repetition of the incident of the "prize crew of one" on the Canadian poacher in the Behring Sea; and it reminds one newspaper of the story of the man who caught a Tartar. "Bring your prisoner in," was the command. "I can't, he won't let

Digitized by Google

me," was the reply. Theoretically, the Chilean vessel with contraband cargo was "arrested;" practically, it was permitted to escape. Consequently, as we made England pay heavily for the Confederate cruisers which were equipped in her ports, we are likely to have a bill to pay in connection with this little episode.

However, the Chilean vessel may be recaptured; as instructions to that effect have been sent to all men-of-war on the Pacific station. The *Omaha* and the *Charleston* are in chase; and the latter seems at present writing to have a fair chance of catching the privateer. The *Itata* was expecting near Cape San Lucas to meet the Chilean warship *Esmeralda*, and to be conveyed by her to the base of operations. If the *Charleston* does not overtake the *Itata* before the latter has joined the *Esmeralda*, there is a likelihood of a naval battle. The latest papers published "rumours of the sinking of the *Itata* by the cruiser *Charleston*," but give neither time nor place.

At the present writing influenza is raging fiercely in England, and is very prevalent among "prominent people." It is almost paralyzing business, and affects politics. The "grand old man," Gladstone, is among the sufferers, and is making a brave fight for life; numbers are dying.

The preparations for the World's Fair are rapidly being carried forward. A remarkable interest has been displayed by other nations; and the various states of the Union are making appropriations for displays. The only "great power" which has declined to take part is Italy, who, however, was not influenced by the New Orleans affair in this decision. She was actuated by "motives of economy, for which reason she declined to participate in the Paris Exposition. Ex-Gov. Waller, of Connecticut, has been appointed a special commissioner to visit the capitals of Europe to "confer with representatives of the foreign Powers and with the leading manufactures." The probabilities are, that the "art palace" will be the finest in the world.

It is not, however, all smooth sailing. Miss Phoebe Couzins, a masculine-female lawyer of St. Louis, had been selected as secretary of the board of lady managers, and was afterwards, for certain reasons, deposed by the president of the board. But she denies the right of the president to depose her without "a vote of the entire board of lady managers," and she is making a contest and appeals in every available quarter. Besides this, the labour organizations are attempting to obtain control of the contract work, so that they may fix the hours of labour, the wages of the labourers, and, in fact, determine what labourers shall be employed.

President Harrison and party, who have been "swinging around the circle" on a long tour, are now on their way east from the Pacific coast. They have almost everywhere been received cordially and enthusiastically. Mr. Harrison seems to be "in the field" for a renomination.

The following is quite like Bastien's *bon mots*:—

The proposal to import Japanese flies into this state to do the work of killing off the gypsy moth is contrary to the fundamental principles of protectionism, and we are surprised to see that some strong protectionist journals favour it.

It is simply putting the pauper labour of the Japanese insect against the well-paid American labour of the men who now travel around the Middlesex Fells with squirt guns and spray the trees with a solution of paris green.

This business of killing gypsy moths promised to be a valuable new industry for Massachusetts. Instead of encouraging it and putting a protective duty on all such competing imports as Japanese flies, the protectionist papers ruthlessly join in trying to crush out this industry and throw the men and squirt guns out of employment.

## *COURT OF ENQUIRY.*

Before Captain YOSHIDA UNE, Superintendent, Marine Office, Osaka, President; and Mr. NAGURA NORIAKI and Captain JOHN JAMES MAHLMANN, Assessors.

This was an enquiry held at Kobe, ordered under Section 23 of the Pilotage Regulations, by the Chief Superintendent of the Mercantile Marine Bureau, Tokyo, into the circumstances attending the stranding of the British steamship *Albany* on Matsusima, Aogi Seto, Inland Sea, on the night of May 15th, 1891, and while in the charge of Mr. William Houghton, a Kii Channel Pilot.

William Houghton, having been cautioned, deponed—I am a coast pilot, holding a license from the Japanese Government for the Idzumi Nada and Kii Channel and from thence to, and including, the Gulf of Tokyo. I lost this license in the *Albany*, and also my master's certificate No. 174. I pilot vessels through the Inland Sea if captains wish or ask me, and when there is no licensed pilot available, as I think that then I have as much right as anybody else to pilot through the Inland Sea. I was engaged to pilot the *Albany* through the Sea just before she left Kobe. The captain of the *Albany* engaged me to pilot the vessel through the Sea. We left Kobe at noon of the 15th of May last, bound through the Inland Sea. I was to leave the vessel at Rokusen. At 1 p.m. we passed Yesaki Lighthouse, and from thence set the course to W. by S. ½ S. correct magnetic. Made Ukado Point about one point on our starboard bow, from whence I steered by marks and the points of land until the time the vessel was wrecked. We entered the northern passage at 9.25 p.m. I think we passed Ategi about 9.00 p.m. From the time of entrance I continued to steer by the land until we got to Konesima, where I shaped a course S.W. by W. ½ W. cor. mag., to pass between the Admiral Bank and Captain Bank, the captain having corrected the cor. mag. course to compass course. The weather was quite clear after passing Konesima, the moon being out. We made the Black Rock the least thing on the port bow, just where it should be made. At this time I could see Boulder Point and Kunosima quite distinct, that is just after passing the Black Rock. From the Black Rock I ported about half a point, to pass mid-channel between Boulder Point and Kunosima. After passing Kunosima the weather became very hazy. I slowed the engines, having gone full speed up to Kunosima. After the engines had been slowed a few minutes, the captain sighted Matsusima on the starboard bow—well on the starboard bow. Then I set the engines full speed ahead, thinking we were well clear of Matsusima. At the same time the captain said to me: "If it gets any thicker we had better anchor." About the same time I ordered the helm to be starboarded a little, and directly thereafter I gave the order "Hard a starboard." At the same instant I saw something ahead which I took to be a a part of Matsusima, I then said "Stop" and "Full speed astern," but she had not lost her way before she struck, the engine having just commenced to go astern before she struck.

By Captain Mahlmann—What precautions did you take before entering the northern passage?—I sent down word to the engine-room for the engineer to be handy, and the anchors were ready for letting go at a moment's notice.

Were the anchors hanging by their stoppers?—I did not go forward to look.

Did you make any other preparations?—I did not make any other preparations.

Did you not double the look-out?—It was not my place.

Was there a look-out man on the forecastle?—I do not know—I did not look.

Was your steering gear in order?—It was up till then; I believe it was right all the way along.

How was the tide when you entered the northern passage?—We had a flood tide, just commenced.

How did you find the time of tide?—I could see by the way junks were riding to the tide.

Where were the junks?—All about, some in the middle of the channel.

I suppose that you could anchor anywhere in the northern passage, if necessary?—It would not be advisable to anchor in from 30 to 40 fathoms of water in a strong tideway.

Are there not anchorages in less water than that about Matsusima?—There are good anchorages on the edges of the Captain and Admiral Banks.

When you shaped your course from abreast of Konesima to S.W. by W. ½ W. you were then steering with the leading marks on namely: Boulder Point and Higashi Peak in line?—I was.

Which means that you were steering straight for Boulder Point?—We were steering straight for Boulder Point until nearing the Black Rock, to within two or three cables.

What course did you steer from the Black Rock?—W.S.W., or I altered the course ½ point.

Did the captain correct this course for deviation?—He did not.

You had been steering a W.S.W. course during the afternoon?—Yes.

Did you find the correction as made by the captain on this course to be correct?—I did.

When you altered your course to W.S.W., at the Black Rock, could you then see Matsusima?—When we were between Boulder Point and Kunosima I could see Matsusima, and also Higashi Peak, quite plain.

When you had altered your course at the Black Rock to W.S.W., how did Matsusima then bear?—About W. by S. ¼ S., or a little on our starboard bow.

How did Boulder Point bear then?—I did not take any bearing, because I could see it quite clearly.

What is the distance from Black Rock to Boulder Point?—About one mile.

And from Black Rock to Matsusima?—About 1¼ mile.

How high and how long is Matsusima?—About ¼ mile long between north and south, and from 250 to 300 ft. high.

Are there any dangers about Matsusima?—Not about Matsusima. The *Albany* was wrecked within 10 or 15 feet of the beach.

How far should a W.S.W. course cor. mag. have taken you clear of the Island of Matsusima?—About ¼ mile.

Did the vessel sheer about much at that place?—She sheered about a little.

How do you account for the ship getting on shore?—The only way I can account for it is that the flood tide caught her on the port bow and set her to the northward.

Was the tide running strong?—About 1½ miles per hour.

Does the flood tide between Boulder Point and Matsusima not set to the N.E. by N., it coming up the Aogi Seto, which would have been about 4 points on your port bow?—I have seen it the other way.

What way?—I have seen it run E.N.E.

Is this not a notorious place for the peculiar set of the tide?—That and the hazy weather is the very reason why I slowed down.

Where did the *Albany* strike the Island?—Near its southernmost point; she wa very nearly clear of the Island.

How did the ship head when she struck?—I could not say. I had starboarded, and I do not think that she went off ½ a point.

Did she alter her position after she struck?—I do not think that she did. As soon as the engines went astern her head went off towards the island.

Supposing you had not backed her engine would she have cleared?—I think she might have done so. I thought then that we were farther from the Island than we actually were.

Did the captain at all interfere with your orders?—He did not.

You said you sighted the island first on your starboard bow; how far?—I had no time to take a bearing, I think about 1½ point.

And where did you see it next?—Right ahead.

Did you see any part of it on your port bow?—The least thing on the port bow. We were then within a few feet of the island.

Did you never think about letting go your anchors?—There was no time, it was all done in an instant. If I had time to get a man forward to the anchors I should have had time to clear the island.

Was that part of the Island you first saw quite clear?—Yes.

Could you see any distance ahead?—I could see Boulder Point, which was on our port quarter, and I saw Higashi Peak a little on our port bow.

Could you see Kodonosima?—I could not pick it up.

Could you see San-umi-sima ahead?—I could not make it out, it being under the high land of Osaki-sima.

What do you take to have been the cause of the southern portion of Matsusima being hidden when the northern portion was clear?—It must have been a fog or a cloud.

Was the moon shining all this time?—She was out and shining.

Did you engage as pilot to the *Albany* on the day she left Kobe?—On the night of the 14th about 6 or 7 o'clock.

Did you know there were licensed pilots to be got at Kobe at the time?—I did not. The captain came to me and engaged me, giving me to understand that all the licensed pilots were engaged for the Russian men-of-war.

Do not you think that if you had inquired at my office you could easily have found out whether any licensed pilots were at Kobe or not?—I don't think that it was my place to come to your office.

Why was it not your place?—Because it was past office hours.

But you could have easily found me, could you not?—I don't know where you live.

Do you not remember having received circular No. 2 of the Pilotage Regulations?—I do not recollect having received it. I may have received it, but I do not remember anything about it.

You said you were going to land at Rokusen from the *Albany*, did you not?—I did.

But you could not do that, could you?—I was not going to land at Rokusen.

Where were you going to land?—I was not going to land anywhere, but just get into a boat and go on board of a passing vessel.

Did you never land at Shimonoseki?—Sometimes, for a short time. I never stop there, I am not allowed.

Is your Kii Channel license not a pass?—It is.

Do you never make that use of it?—My master's certificate does as a pass, and allows me to land at unopen ports for a short time. I have used it sometimes for that purpose.

You had a passport?—I had, which allows me to travel for the good of my health, and I lost it also in the *Albany*, together with my license.

Digitized by Google

How many vessels did you pilot through the Sea from the 1st October, 1889, to the 30th September, 1890?—From 13 to 15.

Do the licensed Inland Sea pilots never attempt to prevent you from interfering with their business?—I have never been interfered with.

You have been actually in charge as pilot of a ship through the Sea, while at the same time there was a licensed pilot on board as passenger?—Yes, more than once.

And did they not ask you to give up charge?—They did not.

You would always engage yourself as a pilot for the Inland Sea if required by any captain?—If a captain asked me to go I should go.

You have gone from Kobe to meet a vessel at Shimonoseki for the purpose of piloting her through the Sea to Kobe, have you not?—I never did. I went from Karatsu to Shimonoseki and piloted the *Haiphong* from thence to Kobe.

Before engaging yourself as pilot for any vessel through the Sea, do you ever enquire whether any properly licensed pilots are disengaged, or not?—Many times I have done so.

Do you solicit for the Inland Sea?—Never.

William Hogg Hood, late master of the steamer *Albany* was then examined by William Houghton as follows:—

Were there any licensed pilots here when you engaged me?—I called at the principal rendezvous of pilots at Kobe and was told that I should not be able to secure a licensed pilot as they were all engaged for the war-ships.

Was the weather clear enough to proceed through the Sea?—I had no apprehension about the weather at any time.

After we had altered the course to S.W. by W. ½ W. to make the Black Rock, did we make it as it should be?—Exactly so.

After passing Boulder Point did it set in a little bit thick, or hazy, and did we slow the engines?—I had no apprehension at the time of its being thick, but as I considered it hazy, and that the engines had been eased, I remarked to the pilot that if it gets thick we must anchor, and was perfectly satisfied about proceeding again full speed.

Did you see Matsusima long before we struck?—Say two or three minutes, but from its position I judged we had cleared it, as we appeared to be fairly in mid-channel.

By Captain Mahlmann—You are not at all acquainted with that locality, are you?—No, I had never been through there before, and this is my reason for taking some one with local knowledge to assist me.

Then you did not give full charge to the pilot?—No, I never do at any time. I don't know that any master of a ship ever does.

The late 2nd mate of the *Albany* was then called and examined by William Houghton:—

You were at the place of shipwreck for about a fortnight, did you see on any occasion during your stay, the southern end of Matsusima in a fog and the northern end clear?—I have. I have seen the one end of the Island all clear and the other invisible on account of driving mist, or haze, from the centre of the Island.

By Captain Mahlmann—Did this only happen on one occasion, or several times during your stay?—On three or four occasions.

The Court then informed Mr. William Houghton that the decision of the Court would be given after it had been approved by His Excellency the Minister of State for Communications, of which due notice would be given to him.

## *A BATTLE IN BEHRING'S SEA.*

I have been requested by a literary gentleman who writes for the papers, who has visited me several times in hospital, and been very kind to me, to relate what I know about that terrible disaster which made me and several others what we now are, helpless cripples, and sent a thousand men and more into eternity. Ah, sir! my heart bleeds to recollect that awful moment, and when I think how many homes in Old England were made desolate in that one instant. How many parents are now mourning for their sons, children for their fathers, and wives for their husbands. Never shall I forget the dreadful cry which rang through the air that fine summer morning; a cry so full of agony and despair that even now the memory of it chills my blood; a cry sent up by men who went to their death bravely, knowing that no help would come from heaven or earth, but doing their duty, as interpreted by them, even unto death. Doing their duty to their country, although doubting the righteousness of the cause they died for. Was England's prestige on the ocean imperilled by the seizure of a few schooners, mostly owned by foreigners, many of which were no better than highway-robbers? And were they worth fighting for? But pardon me, Sir, I am waxing garrulous, but will keep my feelings under control, or else the story will remain untold.

About the origin of this Behring's Sea trouble I know but little. What I do know is that we were suddenly ordered to Squaremolt (Esquimalt), where four more ships of the Pacific Squadron shortly afterwards joined us. Holding the position I did, that of signal quarter-master to the Admiral, and being, as I may say, constantly at his elbow, I knew more of the goings on than anybody else, and am able to tell you what I know from my own observations and not from hearsay. Well, Sir, we laid in Squaremolt for a couple of weeks, and a great deal of correspondence went on between the Admiral and the big-wigs on shore. That things were not the least satisfactory to the Admiral I could tell by the occasional frown on his brow, and by the snatches of conversation I overheard between the officers. He believed that the Yankees should do their own police work, and that we had no earthly business to interfere, which was also the general opinion on board the ships. It was about midnight on the 2nd when we received orders to proceed immediately to Behring's Strait, and stop all farther seizures by the Yankee revenue cruisers; to liberate all vessels seized by them; if resistance was offered to use force, even if we had to blow the opposing vessels out of the water, were they revenue cruisers or men-of-war. Our squadron consisted of two heavy ironclads and three of the cruiser class, with over one thousand men, hearts of oak I called them, on board. When we steamed out of the harbour with the band playing, and every one thinking that the sight only of this formidable force would scare the Yankees without coming to blows, we little imagined what the end would be.

Only one American man-of-war appeared during our passage up; one of these modern ships of which I hear they have now quite a fleet, but apparently not a very powerful vessel. She joined us when we passed Cape Flattery, where she had evidently been waiting for us, and hovered around us during the whole passage up, closely watching our movements. She had very powerful engines as she could steam right round us without trouble, and we were no slow coaches either. Nothing occurred until we arrived at our destination, except a short north-westerly gale we experienced on the second day out, and which only served to break the monotony of the passage. We made the islands on the 12th day out, and took up our station ten miles away from them, which distance was carefully measured and maintained; the ships keeping within signalling distance of each other in clear weather, and closer together in a fog, of which we had plenty. The Admiral's heart was not in the work, as I heard him muttering to himself as he walked the after bridge, where I also was stationed, but he followed out his instructions to the letter, and ordered a vigilant watch to be kept through the squadron. Several schooners approached us and were boarded, but they reported having had no trouble this season. One schooner had been seized by one of the revenue cutters, and sent down to Sitka, earlier in the year, but this was the only outrage committed before our arrival. The American cruiser kept us well in view, steaming up and down between us and the islands, but making no hostile move whatever. I suppose the schooners got bolder by seeing us there, as they now made frequent incursions within the nine mile limit and fired away at the seals, which here appeared in great numbers. The cruiser appeared to take no notice of the sealing schooners, no matter how far they ventured in, but continued on the course first laid out, forward and back, but still keeping us in view. Every day were we favoured with several hours fog, which obscured everything about us, and only the popping of the sealers' guns could then be heard. It was during one of these foggy spells that we heard several shots fired in succession, apparently from heavier metal that a sealer's gun; and when the fog broke it disclosed to us a small revenue steamer in full chase after a schooner flying the British flag, about half-way between us and the islands. The schooner was making for us with all sail set, but the steamer was almost up to her and with the evident intention of boarding her. The Admiral was watching the chase, and when he saw the schooner boarded by the revenue steamer and the red ensign hauled down, he could no longer restrain himself, and ordered an armed boat away from each vessel to the rescue of the schooner. In half an hour's time the British flag was again flying from the schooner's mainmast-head, while our boats kept between her and the revenue cutter, until she was at a safe distance away to leeward. Our boats now returned and were hoisted in by their respective vessels after their officers had made their reports to the Admiral, who showed no exultation over this bloodless vindication of the power of our flag, but rather the reverse as he gruffly responded to the reports made, and walked the bridge with long strides, scanning the Yankee man-of-war, as she now rapidly neared us. The American approached us to within a mile, when a boat was lowered and pulled towards us. An officer sat in the stern-sheets, and when the boat was brought alongside the starboard gangway ladder he sprang lightly up to the deck, where he was received by the first lieutenant, and by him attended to the Admiral's cabin. Of what transpired there I have no knowlege, but in ten minutes' time we saw the officer attended to the gangway, where he again descended to his boat and pulled back to his ship. After a short interval the Admiral came up on the bridge and told me to hoist signals ordering the commanders of all the ships to come on board to receive instructions. A gloom was on his brow as he received them with his habitual old-fashioned courtesy, and it was not until they had all congregated around him that he addressed them. The meaning and import of what he said seems to be impressed on my brain, as if seared by a red-hot iron, although I cannot remember the precise words he used. "Gentlemen! I have received an official communication from the commander of the United States' steamer yonder, stating that he had observed our unwarrantable interference with the discharge of the duties of his country's revenue steamer, but, as no shots were fired and no blood was spilt, he would overlook—mark me, gentlemen!—overlook it; but as he had received instructions from his Government to the effect that the first shot fired from any ship of any foreign power which would occasion the death of a single American citizen, would be paramount to a declaration of war, he would then with all the power under his command, be justified in defying me, let the consequences be what they may. To prevent any shedding of blood he now wished me to withdraw with the ships under my command, as remaining here would ultimately lead to fatal results. So far, gentlemen, his official communication! I have also received a private note from him, in which he begs me, for humanity's sake to retire, as he has means under his control, but little suspected by us, which, if applied, would prove disastrous to us beyond our utmost thoughts. Now, gentlemen, you have the gist of both communications. If it was left to my discretion I would probably leave; but as my orders are positive, to come here and meet force with force, and uphold the flag at all hazards, and protect whoever claims protection under it, I will stay!" Much more he said, divers were the opinions expressed by the different captains, but the upshot was that nothing was altered, every ship had to keep a vigilant look-out night and day, and to rescue any vessel seized that showed the English ensign. The threatening words used by the American captain were derided as Yankee braggadocio, and no attention was paid to them, except perhaps by the Admiral. This happened on a Thursday, a fine, clear day. In the evening a schooner hove in sight; a message was sent to her by the Admiral to keep outside of the fleet, but as the night set in foggy I don't know if she did or not. Next day we had a thick fog; could not see from one end of the ship to the other, but the following day dawned clear with a light northerly breeze. This was the fatal day that sealed so many men's doom. The first break of day showed us two schooners well up towards the islands, having evidently been taking advantage of the previous day's fog, and been close up to the seal rookeries. Soon the revenue steamer appeared, and then the chase began, the two schooners running towards us and the cutter after them. The distance from the cutter to the schooners was about two miles, and four miles from them to us. The man-of-war also came in sight, keeping well astern of the cutter, steaming slowly. The decisive moment had probably arrived which would prove that England could keep her flag respected even in these distant waters; and our officers, all on deck, were laughing and chatting gaily, while the Admiral walked the bridge with a bowed head and thoughtful mien. Suddenly a puff of white smoke was seen to issue from the cutter's bow, followed by the sharp report of the shot fired. It was no play; and was well aimed too, as it carried away the the foremost schooner's main-topmast, which came tumbling down on deck, bringing down also the English ensign. As an old war-horse is said to sniff the distant battle, so the Admiral, at the sound of the shot and the sight of its work, perceptibly changed. With eyes flashing and head erect he now calmly began to issue orders, and I was kept busy for several minutes with the signals. As another shot was thrown from the cutter to the other schooner and ricochetted on the water until it disappeared not far from one of the ships, orders were given to fire at the cutter but to aim high. The gun was trained and fired, but it did no damage. The cutter was now about

Digitized by Google

three miles from us, and she seemingly took no notice of our warning, but continued firing at the schooner; the damaged schooner had lowered her sails, but the other kept right on for us. Another shot was fired at the cutter, who still kept blazing away at the schooner. The Admiral now gave orders to aim low and hit her. This shot went home with terrible effect, and must have struck her abreast of her boilers and penetrated into them, as an immense cloud of steam arose and completely enveloped her; the propeller stopped, and she remained motionless on the water, a wreck. Another sound was now heard and a sharp whistling through our rigging told us that we had now an antagonist to encounter and a more formidable one. The schooners by this time were again under sail and getting well out of the way, after having started the infernal game for us. The American cruiser was steering well to the westward, firing at long range, and our squadron was following him and keeping up a brisk fire with their long range guns. As he could steam so much faster, he could choose his own position, only firing at intervals with an enormous long gun he had on board—a dynamite gun I have been told. Two of our ships were struck, but no great damage was done, I believe. Finally one of our shots hit him on the bow and must have created considerable havoc forward. He instantly showed us his heels and kept away under a full head of steam for some distance. He stopped, as we did not attempt to follow. He was now about four miles from us, and we had the disabled revenue cutter about six miles astern of our furthermost ship. For exactly thirty minutes the cruiser laid without motion with his port side towards us; at the expiration of that time he steamed slowly in our direction to within two miles, where he stopped, with his port side towards us as before. We were intently watching these erratic movements, and I heard the Admiral express his belief that they were laying down torpedoes on which they intended to coax us later; and that belief was farther strengthened when the cruiser began to renew the firing with his heavy guns, and steam slowly back, as if inviting us to follow him. We remained where we were, however, but orders were given to fire away, and for a few minutes shot and shell were flying thick and fast around the retreating cruiser, who occasionally let us have one of his enormous shells in return. The time was now just eight o'clock in the morning; the sun was high up in the heavens, and warm and pleasant were its rays. A light northerly breeze was blowing, which sent the smoke and steam down to leeward of us in volumes. Our antagonist seemed to be invulnerable, as not one of our shots appeared to hit him, and the Admiral was just leaning over the bridge giving some advice to the lieutenant in charge of the battery, when—great God! how can I tell it!—a most terrible noise was heard, as if the bottom of the ocean was rent in twain—a noise that almost petrified us, a frightful, undescribable sound!—and the ship on our extreme left was seen lifted bodily up in the air and riven into a thousand pieces, and these were hurled upwards for hundreds of feet. We had barely taken in the full significance of the fearful scene, before the two next ships, one of them a heavy ironclad, shared the same fate. Can I ever forget it! the fearful yells and shrieks as men were torn limb from limb, and human remains mingled with fragments of iron and steel were thrown high up into the air. The carnage was awful to behold! What terrible power was that which could lift these heavy ships and literally tear them asunder and crush them into atoms, as I would crush a nutshell between my fingers? The steam from the exploded boilers, the smoke and fumes from the dynamite and powder, all combined to make the scene a veritable hell suddenly opened before us. No time had we to think, it all came so sudden and unexpected, and it was as suddenly all over; quicker than it takes me to tell it. The Admiral turned to me, the only one beside himself on the bridge, and said, in a voice quivering with emotion, "Our turn next, Tompkins!" I stood helpless and terrified and could not answer him. The words were not well out of his mouth before it came with such an awful crash and dreadful roar, that no tongue can adequately express or describe in words the terrific scene that ensued. Our crew, as brave as any under the sun, and fearing nothing in an open fight, met their doom with blanched cheeks, many of them already struck dead, I believe, before they were thrown up by this fiendish force and their bodies scattered to the winds in innumerable particles; as the shock alone was sufficient to kill them. I felt myself suddenly lifted, I felt myself going upwards, and then I suddenly received a heavy blow from some hard substance, and knew no more. I and ten more men, all more or less crippled, the only survivors of this lately proud and powerful host, were picked up by the boats of the American man-of-war and brought on board of her, where we were treated, I must say, with the utmost kindness and commiseration by all on board. Nineteen men were killed outright, so I was told, on board of the revenue cutter, and many wounded, by our shot penetrating her boiler and exploding it; the real cause of our destruction; a fearful reprisal indeed! Yes, Sir, the American captain gave us fair warning, but even if we had known what was coming, we would have had to stay and do our duty. How was it done, Sir! The Americans used small but powerful submarine vessels, entirely submerged and able to remain so for hours; these vessels were attached to immense torpedoes, each loaded with hundreds of pounds of dynamite and fitted with time fuzes, under our ships' bottoms, and were timed to explode at the same moment, and so accurate were their calculations that they all exploded in less than one minute and a half from the first to the last. Such wholesale destruction of lives and ships has never occured before since nation went to war against nation. The man-of-war took the disabled revenue cutter in tow and brought her down here, after having diligently searched for several days the scene of the disaster, but nothing more was found there. On her arrival here we were sent to the hospital, where we have been well treated.

## *CRICKET.*

Cricketers were unfortunate on Saturday, a violent storm putting a stop to the play before one side had completed its innings, and as the Club won the toss and elected to go in first, the Navy and Visitors had no show in what otherwise would have been an interesting game. The Club had made 140 when the stumps were drawn, but this score might have been considerably increased had the weather remained fine, and Kenyon been able to keep up his wicket for any length of time, as Crawford had notched 94, and had acquired an amount of confidence that made him difficult to remove. The scoring generally was not heavy. Following are the scores:—

| | | | |

| | | | 140 |

## *BASE BALL.*

This game, played yesterday, was soon over, ending as shown by the score below, in a victory for Tokyo. Several players were hurt during the game, and the Yokohama catcher stuck to it for two innings after getting a severe crack on his hand, but he had ultimately to turn it up.

## *INQUEST.*

An inquest was held on Saturday 6th inst. in the U.S. Consular Court, before W. D. Tillotson, Esq. Consul-General, and Messrs. A. F. Forbes and E. V. Thorne, Associates.

Mr. Thorne asked if, as a member of the press, he was not exempt from serving as an Associate. He was very busy, and it would interfere with his business.

His Honour ruled that he was not exempt, and on Mr. Thorne asking if it would be any use to file a protest, said he could do that afterwards. The Associates were then sworn.

Oshine Yonokichi deponed that he lived at No. 188, Settlement. He knew the deceased by the name of Lee. He first made his acquaintance last year, when he used to go to witness's house two or three times a day. He saw him (deceased) yesterday (Friday) morning at his house. Deceased went into the house and asked for a glass of water, which witness gave him. He sat down and shortly after asked for another glass and after drinking it sat down again. He then rose and asked for a third, but when he went to the filter and lifted the glass to his lips he fell. Witness paid little attention at first, knowing him to be an habitual drinker, but after some time tried to rouse him. As he would not rise, but seemed to be asleep, witness called a policeman, who came at once. As he said it was a serious matter, witness went to the Police Station and requested the inspector there to send a doctor. The inspector came with a doctor. Witness thought the deceased lived about an hour after he fell. Lee had often been in his house and displayed somewhat similar symptoms. He was alive when the policeman came.

A Japanese woman, who gave her name as Muki Koto, deponed that deceased expired at No. 188. She had gone there to clean up the place, and was there when he came in. He wanted a drink of water and got it. He then sat down, but soon after asked for another drink and was given it, but behaved himself in a peculiar manner as if he were ill. She reproached him for drinking liquor, and suggested that he should take a walk and get some food. He said he was a little better, but after a time fell. He died a little after five o'clock she thought.

Dr. Stuart Eldridge deponed—I last saw the deceased yesterday afternoon and performed an autopsy on the body. I found that he came to his death by natural causes. I found nothing to indicate that he had taken poison. I found that death had resulted from a heart clot, caused by very severe and long standing *pleuro-pneumonia*.

R. McCance, deputy marshal, deponed that he went down to the place where the death took place. He had known deceased off and on for about ten years. He was attached to one of the U.S. men-of-war; the *Alert* witness thought. He had been in the Consular Jail, and had always been acknowledged to be an American, and to the best of witness' belief was one. He seemed to be helplessly depraved; did not appear to be able to get out of the state of a common drunkard.

A verdict of death from natural causes was returned.

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, June 6th.

The bill introduced in the House of Commons to prohibit seal hunting in the Behring Sea until the month of May, has been read a third time and passed.

London, June 7th.

The report is again revived that the British Government has promised to protect the Italian coasts against the French, but Sir James Fergusson has stated in the House of Commons that the Government has entered into no engagement pledging the employment of either the Army or the Navy.

London, June 8th.

The Portuguese Chambers have passed the African Convention.

Sir John Macdonald, the Premier of the Dominion of Canada, is dead.

London, June 9th.

The French Chambers have resolved to admit fresh cocoons and raw silk free, the import duty on manufactured silks being 300 francs (? per picul).

London, June 9th.

The baccarat case has ended, and a verdict has been entered for the defendants. The London press criticise the connection of the Prince of Wales with the scandal.

(FROM TONOKING PAPERS.)

Paris, May 23rd.

The Colonial Council, in adopting a report on Colonisation Companies, remarks on the concessions granted by decree.

Pierre Loti has been elected a member of the Academy.

Arrived at Yokohama the 12th June at 3.30 p.m.; had fine weather with light variable winds during the voyage from Nagasaki to port.

The Japanese steamer *Nagato Maru,* Captain Ekstrand, reports:—Left Hakodate the 10th June at 2 p.m.; had light variable winds and fine weather. Arrived at Oginohama the 11th at 0.30 p.m. and left the 12th at 4 a.m.; had light breeze and fine weather and smooth sea during the passage. Arrived at Yokohama the 13th June at 5.50 a.m.

## *LATEST COMMERCIAL.*

### IMPORTS.

There has been another week of steady business in Shirtings and Yarns, with prices generally firm, but only occasionally has any advance been obtained, as holders seem more inclined to reduce their stocks than to restrict business by raising

Digitized by Google

quotations. In Mousseline de Laine a fair business has been doing at slightly better prices, and moderate sales of Turkey Reds have been reported. Velvets have improved in value somewhat, and there have been enquiries for Italian Cloth but at prices considerably below what holders are inclined to accept. Sales for the week comprise the following:—1,500 bales English Yarn, viz. 600 bales of ordinary single and 900 bales two folds; also 5 bales Bombay Yarn, 35,000 pieces 9lb. Shirtings, 3,000 pieces 8½lb., 4,000 pieces T.-Cloths, 1,000 pieces Velvet, 2,000 pieces Turkey Reds, 2,000 pieces Victoria Lawns, 5,000 pieces Mousseline de Laine, 900 pieces Italian Cloth, and 3,000 pieces Blankets.

### METALS.

The Metal market continues remarkably quiet, but there are no quotable changes in values.

| | | | |
|---|---|---|---|
| | PER PICUL. | | |
| Flat Bars, ½ inch | $2.80 | to | 2.90 |
| Flat Bars, ¼ inch | 2.85 | to | 2.90 |
| Round and square up to ½ inch | 2.80 | to | 2.90 |
| Nailrod, assorted | Nom. | | |
| Nailrod, small size | Nom. | | |
| Iron Plates, assorted | 2.90 | to | 3.05 |
| Sheet Iron | 3.10 | to | 3.40 |
| Galvanized Iron sheets | 6.20 | to | 6.40 |
| Wire Nails, assorted | 4.50 | to | 4.75 |
| Tin Plates, per box | 5.50 | to | 5.75 |
| Pig Iron, No. 3 | 1.30 | to | 1.35 |

### KEROSENE.

A few small sales have been effected at late rates. Clearances have been fair. Stocks are ample.

QUOTATIONS.

| | | | |
|---|---|---|---|
| Chester | $1.60 | to | 1.67½ |
| Comet | 1.62½ | to | 1.65 |
| Devoe | 1.60 | to | 1.62½ |
| Russian | 1.55 | to | 1.60 |

### SUGAR.

About 15,000 piculs all kinds sold, but mostly Browns, which, with the exception of Takao, are rather lower in value. Stock—all kinds—163,000 piculs.

| | | | |
|---|---|---|---|
| | PER PICUL. | | |
| Brown Takao | $4.15 | to | 4.20 |
| Brown Daitong | 3.30 | to | 4.10 |
| Brown Canton | 4.80 | to | 5.70 |
| Brown Java and Penang | 5.00 | to | 5.80 |
| White Refined | 4.80 | to | 7.25 |

## EXPORTS.

### RAW SILK.

Our last issue was dated the 5th instant, since which date there has been but very little business done in this market, the total net settlements amounting to 134 piculs, divided thus:—*Filatures* 52 piculs, *Re reels* 40 piculs, *Kakeda* 42 piculs. Direct shipments by native Kaisha have been 76 piculs bringing the week's business up to 210 piculs.

The business on record is of a hand-to-mouth character, no general demand, but here and there are order has to be filled and, despite of the difficulty to get the proper quality, it is done, which accounts for the settlements as stated above.

As regards the new crop, nothing but the best of news can be given. Japanese growers so far appear disinclined to know much on the subject; now and then small damage is reported here and there, but, on strict inquiry these rumours cannot be upheld, and the general opinion is that we shall have a much larger crop than during the present season.

A few boxes of new *Filatures* and *Re reels* have arrived, but so far no sales have taken place. Small lots of new Silk are now expected to arrive from day to day, and within a week we may be able to give some reliable reports both as regards quality and quantity of the next season's outturn.

Shipments during the week have been 622 bales, the French mail steamer *Oxus*, on the 7th instant, taking 476 bales to Europe and the O. & O. steamer *Gaelie* on the 9th instant, carrying 146 bales to America. These shipments bring the present export figures to 33,943 piculs, against 35,429 piculs last year and 41,193 piculs in 1889.

*Hanks.*—Nothing done.

*Filatures.*—With the exception of two parcels of *Ise Watarase* at $580, the settlements were all of common quality ranging as low as $540.

*Re reels.*—A few bales of Joshu *Tengusha* were bought at $555; the rest of the settlements consisted of common quality from $520 to $440.

*Kakeda.*—Severals parcels of *Daruma* at $560 to $567½, and one lot of *Hana-musume* at $540, make up the bulk of the settlements, besides which a few bales of *Red Flag* changed hands at the latter quotation.

It is impossible to make proper quotations, and therefore all prices are withdrawn.

### WASTE SILK.

Absolute stagnation in this branch, total settlements during the week being but 6 piculs, divided thus:—*Noshi* 1 picul, *Kibiso* 5 piculs.

The *Oxus* has taken 200 piculs Waste to Europe and one bale, 3 piculs, was shipped to America per steamer *Gaelic*, which shipments bring present export figures to 31,276 piculs, against 29,281 piculs last year and 31,375 piculs in 1889.

Quotations must be considered mostly nominal; there are a few buyers who take small lots at full prices, but generally there is no inclination to buy.

**Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.**

## STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

**KINGDON PATENT LIGHT PORTABLE ENGINE**

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives *three times the power*, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

*Illustrated Catalogue in English, French, or Spanish Send for Copy to*

## SIMPSON, STRICKLAND & CO.

WORKS: DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE: 181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

**KEATING'S INSECT POWDER.**

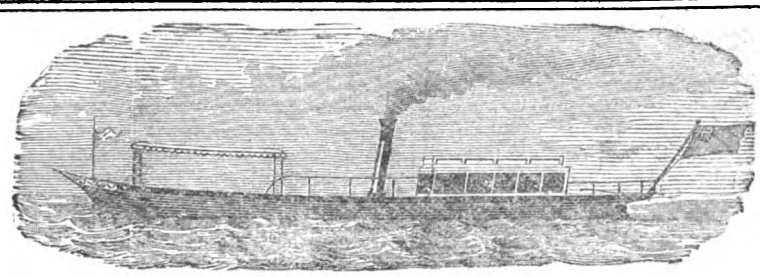
BUGS, FLEAS, MOTHS, BEETLES, and all other insects, are destroyed by KEATING'S INSECT POWDER, which is quite harmless to Domestic Animals. In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application. Ask for and take no other than "KEATING'S POWDER," as imitations are noxious, and fail in giving satisfaction. Sold by all Chemists, in Tins and Bottles.

**THE GREATEST WONDER OF MODERN TIMES.**

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

# YARROW'S

## SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

## YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

## *SUMMARY OF NEWS.*

H.I.H. PRINCE ARISUGAWA TAKEHITO returned to the capital on the 14th instant from Yokosuka

MARQUIS KURODA NAGASHIGE has taken his M.A. degree in the University of Cambridge.

THE grand festival of the Hiye Shrine, Kojimachi, Tokyo, will be held on the 15th and 16th instant.

MR. HAYASHI, hitherto Governor of Hyogo, has been appointed Vice-Minister of State for Foreign Affairs.

THE *Yamato Kan*, Captain Morooka, was despatched on the 14th instant to protect Japanese interests in China.

VISCOUNT KAGAWA, Grand Master of Services to H.I.M. the Empress, is at present confined to his residence by illness.

THE Prince Imperial visited the Tokyo Arsenal on the 14th instant at 9.30 a.m., and returned to the Palace about 2 p.m.

PRINCE KONOYE ATSUMARO has been elected Chairman of the Committee for the revision of the Constitution of the Nobles' Club.

MR. UTSUMI, Prefect of Kanagawa, and Mr. Matsudaira, Prefect of Kumamoto, have been raised to first class *chokunin* rank.

MR. IWASAKI YANOSUKE intends to construct extensive buildings on the old parade ground at Misakicho, Kanda, Tokyo, to be used as an industrial museum.

A SEVERE hail-storm visited the village of Kanazawa in the district of Kita-koma, Yamanashi Prefecture, on the afternoon of the 6th instant. It began to fall about 3 o'clock and lasted for 30 minutes. Much damage was caused to barley, wheat, and mulberry-trees. The village of Sayukuchi in Higashi-Yatsushiro district, of the same Prefecture, was visited by the storm about the same hour.

MR. IZAWA SHUJI, Director of the School of Music in Uyeno Park, and a Councillor of the Educational Department, was placed on the *hishoku* (retired) list on the 13th instant.

THE Russian Crown Prince has presented a sum of money amounting to 2,000 *yen* to a number of constables, who guarded the Prince in various parts of Japan during his visit to the Empire.

THE graduates of the late Mr. Nakamura's institution, who assembled in the capital to attend his funeral, have decided to erect a monument and to establish a library in memory of the deceased gentleman.

Two new railway stations will be opened on the Tokaido line, on the 16th instant, one at Yasuki between the Okazaki and Karukaya Stations and the other at Yashu between the Yawata and Kusatsu stations.

FIRE broke out on the afternoon of the 6th instant, in a house at Nishi-sakurajima-mura, Kita-osumigori, Kagoshima, and before the flames could be subdued 22 buildings were destroyed. One woman was burned to death in the conflagration.

DR. CARGIL G. KNOTT, Professor in the Science College of the Imperial University, left for home to-day in the steamer *China*, the term of his engagement in Japan having terminated. He was admitted to an audience of H.I.M. the Emperor on the 15th instant.

VISCOUNTS SHINAGAWA, Minister of State for Home Affairs, and Tanaka, Minister of State for Justice, have been raised to second class second grade from first class third grade, and Viscount Takashima, Minister of State for War, has been raised to second class second grade from second class third grade.

MR. YAMANOUCHI, a Secretary of the Imperial Household, and Assistant Chief of the Section of External Affairs in the Imperial Household Department, was permitted by the Decorations Board on the 11th instant to accept and wear decorations conferred on him by the King of Siam and the Sultan of Turkey.

A TELEGRAM from Tomioka (Joshu) reports that the Tomioka Filature was offered for sale by public tender on the 15th instant. Only two tenders were handed in, one (*yen* 13,570) by Mr. Katakura Kentaro, and the other (*yen* 13,125) by Mr. Kishi Kasuke, both of whom are residents of Shinano, Nagano Prefecture. No sale took place, the prices offered being below the reserve (*yen* 55,000).

Two *soshi* named Abe Gorokuro, a *heimin* of Shizuoka Prefecture, and Igarashi Hachiro, a *shizoku* of Fukuoka Prefecture, were sentenced on the 15th instant, in the Tokyo Local Court to major confinement for three and two months respectively on a charge of having forced an entrance into the residence of Mr. Seki Naohiko, editor of the *Nichi Nichi Shimbun*, and a member of the Lower House, and behaved themselves in a disorderly manner.

A SPECIAL meeting of the Cabinet was held on Saturday, the 13th instant, and was attended by Counts Matsukata, Goto, and Oki, Viscounts Kabayama, Enomoto, Takashima, and Tanaka, and Mr. Mutsu, by whom the revision of the Regulations as to the reorganization of the Government and the estimates for the 25th fiscal year were discussed. Mr. Shirane, Vice-Minister for Home Afiairs, Viscount Okabe, Vice-Minister of the Foreign Department, and Mr. Hayashi, Governor of Hyogo, were also present at the meeting.

MR. SHIMIZU MASATOSHI, a resident of Ichikawamura, Takatagori, Hiroshima Prefecture, has discovered a method of obtaining acetic acid from trees such as the oak, willow, fir, and chestnut. Mr. Shimizu can obtain 25 bottles, each of three *go* (one *go*=$5\frac{1}{10}$ ounces), of the acid from 100 *kwamme* (one *kwamme*=$8\frac{1}{4}$lbs.) of timber, each bottle of the value of about 25 *sen*. By adding a bottle of this acid to one *to* (one *to* = a little over $3\frac{1}{2}$ gal.) of water, a very delicate vinegar suitable for table use is made. The refuse of the trees can be converted into 25 *kwamme* of charcoal through the ordinary process.

DURING March last the Oji Paper Mills, the Yukosha, the Kobe Paper Mills, the Yokkaichi Paper Mills, and the Fuji Paper Mills manufactured 1,308,898.49 *kin*, or about 1,745,198 pounds of paper, the sales during the period amounting to 1,130,532.09 *kin*, or a little over 1,507,376 pounds. Classifying the different varieties, we find that of ordinary printing paper, 1,035,178.49 *kin* were manufactured and 840,298.59 *kin* sold; of superior printing paper, 14,852.10 *kin* were manufactured and 15,598.00 *kin* sold; of coloured paper, 6,139.00 *kin* were manufactured and 6,223.00 *kin* sold; of wrapping paper, 113,508.10 *kin* were manufactured and 112,191.50 *kin* sold; and of miscellaneous kinds, 139,221.00 *kin* were manufactured and 155,821.00 *kin* sold.

AN Osaka telegram dated the 12th instant reports that the members of the Osaka City Council despatched on the 11th instant a telegraphic message to the Home Minister asking that Mr. Nishimura, Governor of Osaka, should not be transferred to any other position, and also to Mr. Nishimura desiring him to remain in his present post. A later telegram states that Mr. Omiwa, President, and several members of the Osaka City Assembly, held a meeting the same day and decided to send a telegram to the Home Minister asking that Mr. Nishimura should not be transferred from Osaka. Mr. Taniguchi, a member of the Osaka City Council, and Mr. Omiwa were to start for the capital on the 13th instant to make a personal application to the Home Minister in the same sense.

TRADE continues in a satisfactory condition generally, and the improved tone of the markets and of prices have been maintained. The low offers made by holders of the productions of Japanese mills have killed the Bombay Yarn trade, and affected English spinnings to some extent. Prices, however, have remained steady and firm for English Yarns, of which sales include a fair quantity, as well as a moderate amount of Shirtings and a variety of other Piecegoods. Metals are still very quiet, and Kerosene is dull, with but little enquiry. There has been a large business in White Sugar, but Browns are hardly looked at, and are lower in value. The principal Export has not yet come forward in quantities sufficient to make a market, but the few transactions that have been put through show new Silk to be about 15 per cent. cheaper at the opening of this season than that of last. The Tea trade has not been quite so active, but prices have been well maintained. Second crop leaf is now in full supply, and total settlements to date are 20,000 piculs more than at same period last year. Exchange has advanced a point or two on the week, and quotations close fairly firm.

## *EDITORIAL NOTES.*

THE MINISTERS OF HOME AND FOREIGN AFFAIRS.

IT is the opinion of the *Jiyu* that the Otsu affair and the Otsu affair only must be held responsible for the resignations of Count Saigo and Viscount Aoki. The Radical organ arrives at this conclusion thus:—When the news of the attempt on the life of the Czarevitch reached the Emperor, His Majesty, deeply pained, summoned Count Ito to the Palace, and, after consultation with him, issued the Rescript of the 11th of May, commencing with the words "*Chin oyobi seifu shimmin wa kokuhin no tairei wo motte*," &c. (While we, our Government and our subjects were preparing to receive our national guest with all ceremony, &c). The words "national guest" occurring in this proclamation imparted to the affair an international signification, and the responsibility for the occurrence at Otsu was thus placed on the shoulders of the Minister of Foreign Affairs, the Minister of Home Affairs being, of course, equally responsible for the protection of the Imperial guest. Hence nothing remained for Count Saigo and Viscount Aoki but resignation. This strikes us as a subtle attempt to exhibit Count Ito in the light of the Minister-maker and Minister-marrer of the occasion. According to the *Jiyu's* theory, His Majesty, with the advice of the President of the House of Peers, ordered a Rescript to be drafted in such terms that it involved the resignation of the Minister of State for Foreign Affairs. Responsibility is often a shadowy thing, but surely it reached the extreme limits of tenuity when it connected Viscount Aoki with the Otsu incident.

PROFESSOR C. G. KNOTT.

THE Emperor has been pleased to confer on Professor C. G. Knott, of the Imperial University, the Fourth Class Decoration of the Rising Sun. It will be inferred that this distinction marks Professor Knott's departure from Japan, and the inference, we regret to say, is only too correct. After seven years' tenure of the chair of Physics in the Imperial University, Professor Knott's place is to be taken by a Japanese. Such changes are, of course, inevitable. The Japanese are gradually qualifying to dispense altogether with foreign assistance in their schools and colleges. But while from this point of view there may be grounds for congratulation, it is impossible not to regret that a man of Dr. Knott's exceptional ability and attainments should no longer give his services to the cause of education in Japan. The reputation his talents have earned for him in this country is a source of pride to his nationals and of just satisfaction to himself, and his active mind no less than his untiring enthusiasm will be seriously missed by the learned societies which owe so much to his cōoperation. Not alone in the field of scientific research, but also as a writer he possesses rare gifts. His epitomes of the Asiatic Society's proceedings, before that body deprived itself of his services in obedience to a romantic phantasy, used to be models of compendiousness and lucidity. The driest subject became in his hands interesting and attractive. Much, however, as we shall regret and miss his departure for selfish reasons, we cannot pretend to think that he does not act wisely in leaving Japan. There is no future for a foreigner in the Japanese service, and there can be none until the conditions are radically changed. With Dr. Knott's gifts a successful, and, we venture to think, a brilliant career is assured in his own country, where the rewards of merit come in a solid and permanent shape. Dr. Knott will have the honour of being received by the Emperor in farewell audience on Monday, and left Tokyo by the 3.30 train on Friday afternoon, to sail the following day by the *China*.

OFFICIAL CHANGES.

MR. HAYASHI TADASU, Governor of Hyogo, has accepted the post of Vice-Minister of Foreign Affairs, and Viscount Okabe, the present holder of the latter position, is gazetted a Minister Plenipotentiary. Mr. Hayashi's successor at Hyogo is Mr. Su, Chief Secretary of the Cabinet. Another change, decided by the Cabinet on the 13th inst., is that of Mr. Nishimura, Governor of Osaka, to the Vice-Ministry of the Department of Agriculture and Commerce, the present holder of which is Mr. Ishida. Mr. Nishimura is succeeded at Osaka by Mr. Yamada, Governor of Fukushima Prefecture. The new Vice-Minister of Foreign Affairs is an official of considerable service. In December, 1885, he was transferred from the Department of Public Works to be Chief of the Bureau of Archives in the Cabinet, and in March of the following year he became Chief of the Bureau of Posts in the Department of Communications, from which position he was transferred, in December, 1888, to the Governorship of Kagawa Prefecture, where he served until his appointment to Hyogo Prefecture in December, 1889. Mr. Hayashi speaks English fluently, and has always been a favourite with Japanese and foreigners alike.

BEWARE OF CONDENSED MILK.

LAST Monday, after attending the funeral of Mr. Ballard, in Kobe, the Rev. N. W. Utley and wife, of the Kwan Sei Gakkuin, took tea with Dr. S. H. Wainwright and family at their residence in Palmore Institute. Ice cream was served and partaken of, and no inconvenience was experienced until the following morning about one o'clock, when both families were taken seriously ill. Dr. Wainwright first awoke suffering intensely, and found his wife to be in the same condition. They lay suffering, not being able even to call the servants. At the same hour of the night Mr. Utley and his wife were also taken violently ill. Dr. Kin was summoned and has been constantly with them ever since. Up to this (Wednesday) they are but little better, and some fears have been expressed about their recovery, though the doctors think the chances are in their favour. The ice cream was undoubtedly the cause of the illness, as it has since been learned that a servant made the cream out of a can of condensed milk that was opened several days previously.

FIRE IN GENSAN.

A FIRE of disastrous dimensions occurred at Gensan in Korea on the 14th of last month. It broke out at one o'clock in the afternoon, and the day being calm no fears of the flames spreading were at first entertained. Possibly this feeling of security led to perfunctory action, for by degrees the conflagration gained ground, and 239 houses had been completely destroyed and 54 partially burned before the fire could be extinguished at seven o'clock in the evening. The people thus deprived of their homes and shops were, for the most part, in the humblest circumstances, and the distress is reported to have been terrible. The Japanese settlers came forward at once and contributed 25 *koku* of rice, which was distributed among a thousand people, the occupants of 192 houses. A place for boiling the rice was also made by the Japanese within the devastated area. The gratitude evinced by the Koreans for this timely aid is said to have been profound.

NEW CHURCH AT OSAKA.

THE *Hyogo News* reports the ceremony of consecrating a new church at Osaka, the Sei Kyushu Kyokai. The consecration rites were performed by the Rt. Rev. Bishop Bickersteth. "The new church is erected on the site of the one which was burnt down by the disastrous conflagration which occurred in September last, at a cost of about $2,500. Of this sum $2,250 has already been raised, the Japanese contributing freely, while Bishop Bickersteth, to commemorate the year of the synod of the Church in Japan, gave the chancel and chancel furniture in addition to a subscription of $100. The old church was built in 1883, the nucleus of the congregation being formed by 11 adults and 5 children leaving the older and flourishing Trinity Church. Since that time the membership has steadily increased, so that out of 180 communicants on Sunday 150 were Japanese. The total church membership last year was about 180, of whom 118 are regular attendants, 11 non-regular, 18 have left for the interior to engage in Church work, 22 have left Osaka and joined other churches, and 14 have left Osaka for their native villages. The church is not absolutely self-supporting, but is on a fair way to being so. The native Christians defray the expenses of public worship and of keeping the building in order, besides contributing $10 a month to the support of an incumbent, while the Trinity Church congregation contribute $15 a month to support their pastor. This year probably more will be contributed. The accounts of the churches in Osaka are looked after by a Council composed of representatives from each church, the Ven. Archdeacon Warren being president of the Council—he is the only foreigner on it—as representing the C.M.S., which annually contributes to the four churches a sum of $500. The new church, which is a neat little structure, accommodates about 200 people. It consists of a nave and two side aisles, with a chancel, the aisles being separated from the nave by an arcade of circular pillars and five arches, with clerestory windows over. Adjoining the chancel is a good-sized vestry, while at the entrance to the church is a spacious porch. The building is of wood frame with plaster, the arches being formed of wood coated with plaster, and having mouldings of hard white plaster. The roof is an open timber one, with curved pieces under the tie-beams, supported by corbels and small circular columns between the arches of the arcade. The windows are filled in with cusped tracery in wood, the style of the whole being a faint portrayal of that of the late 15th century. Mr. A. N. Hansel, F.R.I.B.A., architect of Kobe and Osaka, drew up the designs and superintended the construction of the edifice gratuitously as his subscription to the work."

THE TROUBLES IN CHINA.

A CORRESPONDENT writes to us (*N.-C. Daily News*) from Nanking under date the 4th inst.:—All is quiet here at present, but there are constant rumours of further trouble. The people say: "The Catholics must go." Perhaps to others they say: "The Protestants must go." So long as affairs are unsettled at Wuhu, there will be disquiet here. As to the question touching a desire for rebellion on the part of the Ko-lao Hui, I can only report the opinions of others. This is the view of nearly every Chinaman with whom I have talked, whether of officals or the people. But the Chinese delight in rumours and these lose nothing as they travel. I have been gravely told that there are between 20 and 30 millions of members in this society and that the Governor-General is one of them. Some time before your leader upon this subject appeared I heard several Chinamen advance the theory that the attack on foreigners was a mere pretence, the desire being to involve China in a foreign war and thus make the way easy for the overthrow of the dynasty. Of course the matter is not talked about very openly, but when the question comes up men speak their opinions freely. Two of our number were warned the other day, however, by a company of soldiers that if they didn't stop talking about the Ko-lao Hui they would "eat bitterness." The matter has evidently been brewing for some time. Several months ago a personal teacher employed by one of our number living north of the river gave up his situation because he understood there was an attack soon to be made upon foreigners, and he did not wish to be associated with them. Another teacher not long ago told the missionary employing him that there would be a rebellion soon. All these are mere straws, but they indicate the feeling of the people. One circumstance may lend some colour to the theory of blackmail. The late Viceroy kept a large number of men upon the pay-roll for whom there was no need. It is said by the Chinese that he was paid to do so. It may be they were Ko-lao-Hui men. Liu Kun-yi has turned them out, which might be the cause of a rumpus here. This, however, can hardly explain the attempts to stir up trouble outside the district ruled by the Viceroy. The

Digitized by Google

drought which still continues threatens to complicate matters. The Viceroy and other officials have been out several times to pray for rain and yesterday the Viceroy went again *on foot*. A "dragon" that was placed in the temple last week to be worshipped died shortly after the service, which might well alarm a superstitious Chinaman. Still the Governor is a strong man, and seems to have his army well in hand. Rebellion will not be easy and may not be attempted after the recent experiences.

### A SINGULAR STORY.

THE following paragraphs, which we take from the columns of the *Hyogo News*, are of too extraordinary a character to be passed over in silence :—

In connection with the visit of the Czarewitch a curious story, for the truth of which our informant vouches, is being circulated. It is said that as a matter of courtesy the Russian Prince wired from China asking permission to take his fleet around Kagoshima. As a matter of fact no such permission was needed, but the request was made through the Russian Minister at Tokyo to avoid giving offence.

Interesting is the sequel. With the arrogance, which recently has had so tremendous a fall, the Japanese refused permission for any but the Prince's own vessel to visit Kagoshima, whereupon the Russian Minister coolly informed them that the other vessels would accompany the *Pamiat Azova*, and that the Japanese would stop them at their peril. Of course the Japanese gave way, but the lesson was a much-needed one It is reported that the wholesale resignations resulted from this incident.

With what object, other than that of wanton mischief-making, such paragraphs are published, we are at a loss to conceive. The ignorance of a writer who imagines that foreign war-vessels are at liberty to enter Japanese unopened ports without permits from the Japanese Government, is only equalled by his recklessness in attributing to the Russian Representative in Tokyo conduct which would immediately and inexcusably imperil the friendly relations between the two empires. The story, we need scarcely say, is absolutely untrue. At an early date the Japanese Government decided that no permit need be carried by any ships of war accompanying the Czarwitch, so long as they did not visit unopened ports independently of the Imperial Party. Further, it had always been contemplated that a Japanese squadron should escort the Russian squadron in Japanese waters as a matter of courtesy, and to the Admiral commanding the Japanese ships authority was entrusted to issue permits enabling any of the Russian vessels to visit unopened ports independently of the Prince Imperial. All this was made clear by the vernacular press in April, for intelligence was then published that the Minister of State for the Interior had issued instructions to Local Authorities directing that if a Russian ship visited an unopened port with a permit from the Japanese Admiral, her officers and men should be allowed to land, and treated with hospitality and consideration. Thus an affair which, in truth, furnished opportunity only for the display of mutual friendliness and courtesy, is perverted by the informant of the journal quoted above into an example of needless incivility on the one side and rude menace on the other.

### JAPAN IN "CHAMBER'S ENCYCLOPÆDIA."

THE ninth volume of "Chamber's Encyclopædia" contains an excellent article on Japan from the pen of Professor J. M. Dixon of the Imperial University. Filling ten of the closely printed pages of this widely known work, the article supplies a mass of well digested and carefully marshalled information. There are twenty-one minor headings, each of which is almost monographic so far as the purposes of such a work are concerned. That Professor Dixon would write accurately and exhaustively was to be expected, but he deserves to be specially complimented for the judicial spirit displayed by him in treating the vexed branches of his subject. His sense of proportion doubtless restrained him from entering into any elaborate discussion of the questions that have occupied so prominent a place in the field of the foreign residents' vision during the past ten years, but he manages to convey a succinct and impartial idea of the situation in the following paragraph: —"In 1887 the negotiations for a revision of the treaties were broken off owing to an outbreak of popular dissatisfaction with the guarantees demanded by the seventeen foreign powers acting in concert. This breakdown was followed by a distinct conservative reaction in the nation, in no way seriously affecting the steady progress of Western institutions, but marking a more cautious attitude and a more critical spirit. In the spring of 1889 the combination of treaty powers was broken through, by the action first of the United States and then of Germany and Russia, who formed treaties on their own account, abolishing extraterritoriality and sanctioning mixed residence under certain mild restrictions. These treaties were to come into force in 1890. Mexico, not a treaty power, had also arranged an independent treaty in November, 1888. Other powers prepared to follow. But a strong opposition having sprung up, the Kuroda Cabinet found itself unable to carry out the scheme, and treaty revision was once more shelved. This is the close of the first epoch in the modern history of Japan, following on the heels of the promulgation of a popular constitution, February 11th, 1889." It is not the business of a writer for an encyclopædia to indulge in speculations, but we cannot help wishing that Mr. Dixon had added the forecast of so impartial an observer as to the circumstances under which the present epoch of Japan's modern history will close. His analysis of Japanese character is as follows :—"The Japanese have many excellent qualities: they are kindly, courteous, law-abiding, cleanly in their habits, frugal, and possessed with a high sense of personal honour which makes sordidness unknown. This is associated, moreover, with an ardent patriotic spirit, quite removed from factiousness. Nowhere are good manners and artistic culture so widespread, reaching even to the lowest. On the other hand, the people are deficient in moral earnestness and courage, which leads to corruption in social life and institutions. It is only when matters have become intolerable that discipline is enforced by the use of Draconian methods. An utter lack of chivalry towards women is an unpleasing feature of the national life. Civic courage has also to be developed."

### "THE HAPPY TAOTAI."

THE poets that once graced the columns of the *Chinese Times* have transferred their music to the columns of the *North China Herald*. Here is an example, clever, and in every respect delightful :—

Who is the happy Taotai? Who is he
That every Graduate should wish to be?
He is the court that blindly doth dispense
Justice—in cases which involve no pence.
The cultured conjurer of phrases neat
That melt stern proclamation into sweet
Admonishings; who quotes a classic text,
Lest native men of letters should be vext.
He is the orphan of maturer years,
Who for a sire or dam no longer fears,
Thrust in reluctant private life, to mourn;
Griefs borne in idleness are doubly borne!
Whom neither famine nor the floods annoy,
Nor lawless malice of the K'o Lao Hui;
Who waits expectant for the hour to strike,
That "China's sorrow" brings him leave to dike,
And hath in such a river banking plann'd
To find Pactolus with its golden sand.
He is the suave, sententious host that cheers
With sanguine nothingness the willing ears
Of wand'ring Royalty, content to be
The guest of none more highly placed than he.
He is the shrewd financier who adjusts
Indemnities with charitable trusts,
And of the misplaced largesse of the world
Compounds for insults by his rabble hurled;
Whom, for his zeal, the higher powers thank
With coral button of the second rank.
This is the happy Taotai, this is he
That every graduate should wish to be.

### THE EMPEROR OF GERMANY.

THE Emperor of Germany's Cabinet Order to the Minister for War on the occasion of Von Moltke's death, was as follows :—"According to God's unsearchable wisdom, Field-Marshal General Count von Moltke was called away from this life last evening. Deeply moved, I see the aged hero, my true friend and counsellor, torn from my side. I mourn with deepest pain the irreparable loss that, with me, my army and the whole German Fatherland have suffered. All honour be to his memory, which will continue to live ineffaceable on the pages of the history of the world, and will retain alive for future generations the picture of the deep thinker, the great general. Up to his last breath the deceased served my illustrious ancestors and myself with retiring simplicity, unselfish adhesion to duty, and constant loyalty, and reaped untold deserts by his eminent gifts and brilliant deeds both in victorious wars and in the quiet labours of peace, for the sake of the glory of the army and the welfare of the Fatherland, whose gratitude will never die out."

### POSTAGE STAMPS.

AN expert in postage stamps is the latest production of Japan, according to the *Yomiuri Shimbun*. His name is Sakai Waichiro, and his place of residence, Kiu-hoji-machi, Shinsai-bashi, Osaka. He began to collect stamps and learn to judge them four or five years ago, and he is now said to have been employed by a firm in St. Louis as a collector and examiner of the stamps of all nations. The *Yomi-uri* adds that no one has yet succeeded in putting together the postage stamps of the whole world, and that if anyone did suceeed, his collection would be worth many tens of thousands of *yen*.

* * *

We read in another journal, the *Tokyo Shimpo*, that a tradesman, by name Yoshizawa, residing at No. 5, Konyacho in the Kanda district of Tokyo, is busily engaged collecting old post-cards, envelopes, and so forth. For a hundred perfect specimens of the brick-red double post-cards with vermilion borders, issued in 1873, he pays a hundred and fifty *yen*. All other postage stamps and covers of the *Meiji* era are readily purchased for purposes of export. Among all the crazes that have graced or disgraced this nineteenth century none is more perplexing to the uninitiated than the collecting of postage stamps. Probably the occupation has some charms if one could only divine them, but from a rational point of view rabbits, roses, or even pigs seem preferable objects of dilettantism.

### A COMPOSITION.

HERE is an essay written by a little Japanese lad in a certain country school. We give it verbatim, not for the sake of its halting English, but for reasons which need not be explained to those capable of appreciating them :—

Spring, June 8th, 1891.

I have been lately in a boat under a hill for my study. On the last of those days, I jumped up and looked, once on the hill: the heaven, is pure, blue, and clear, in which the warm and delicate golden sun is sending down his light unto his child [meaning the Earth evidently] As I gazed down the Face of the child whose face, which inclines to cold on account of giving up gradually his own heat that, when he was born between his father and mother he was bestowed by them, which, I supposed will be yellow and wrinkled, I surprised for the preceeding supposition was converse and opposite: the hair is green, the lake is clear and cheerful, a fishing tongue is wandering about the lake, the lips are singing their songs, and the beautiful cheeks are dotted with pink or red colours the nice face.

### INSTRUCTIONS ISSUED BY THE NEW MINISTER OF STATE FOR HOME AFFAIRS.

HIS EXCELLENCY VISCOUNT SHINAGAWA, the new Minister of State for Home Affairs, addressed the following instructions to Local Officials and Police throughout the empire on the 15th instant :—"Although my want of ability and the weak state of my health disqualify me for the proper discharge of the duties of Minister of State for Home Affairs, I have resolved, in deference to the gracious mandate of our Imperial Sovereign, to assume the functions of that important post. By earnest attention I hope to establish touch with all classes, and to show my gratitude for His Majesty's favour. The Local Government system is the pivot of the domestic polity. Local autonomy is the basis of national organization. To make this basis firm, attention must be paid to the development of genuine strength rather than to the elaboration of externals. The system of Local Government has hardly reached the stage of practical inception and has by no means attained completion. Steps must be taken to foster the spirit of autonomy, and to extend the actuality of the system. To preserve social order and public tranquillity is the function of the police. A constable's prime duty in the presence of an emergency or at a moment

Digitized by Google

of crisis is to choose wisely between leniency and severity; to count himself before everything as a guard; to avoid the habit of employing his authority oppressively; to treat all persons fairly and benevolently, taking these two principles as guides in his every-day practice. Constitutional institutions have been inaugurated. Administration by law has become an accomplished fact. The provisions of law have at length been brought to fullness. Administrative expenses have increased, but that is inevitable. Nevertheless, administrative progress must keep pace with the development of material resources. Strict economy has to be made a prime object; external adornment avoided, and the growth of the national strength fostered. The aim of the executive is to advance the public interests. The achievement of that aim depends upon the conduct of officials, and it is essential that they should recognise the fact. Such are the general objects of domestic administration. Its details will be shown according to circumstances and occasion. The Home Department stands to the localities in the position of a head to a body. Unless the channels of moral communication between the two be uninterrupted, administration cannot be successful. Therefore I offer this explanation, trusting that it will be clearly understood."

### THE EQUITABLE LIFE ASSURANCE SOCIETY.

THE Equitable Life Assurance Society, the originator of the Tontine system of life assurance, has sent to Japan a representative, Mr. J. T. Hamilton, to bring its advantages under the notice of the public. Such a step is only in keeping with the enterprise of the Society, and with the wonderful position it has taken among the insurance corporations of the world. The Equitable, we find, carries £36,513,354 of new assurance; £131,461,805 of assurance in force; has a premium income of £5,319,221, and a surplus of £4,733,557, the percentage of assets to liabilities being £127. The American company which came next to the Equitable at the end of 1889, had £31,583,851 of new assurance; £117,883,206 of assurance in force; a premium income of £4,943,304, and a surplus of £2,011,927, its percentage of assets to liabilities being £108. To quote from a *brochure* issued by the society, we find that taking the latest returns of the forty British companies reporting the largest amount of new business written, and adding the new business of all these forty companies together, we reach a total of £28,864,938. The excess of the business of the Equitable, for a single year, over the total new business of these forty companies is, therefore, nearly eight million pounds sterling. * * * "Among the improvements in American life assurance, none have done more to revolutionise the practise or stimulate the business than the adaptation by the Equitable Society, nearly twenty years ago, of the Tontine principle to the accumulation and distribution of bonuses. The improvement was designed to meet three criticisms which had previously been made against life assurance:

First—That large profits were realized by the representatives of those policy-holders who died early, but who had paid comparatively little, while those who lived longer paid more and received less in proportion to their contributions.

Second—That an assurance policy on the life plan, the cheapest and, therefore, the only available form of assurance to a large number, *could never be terminated without a sacrifice* except upon the death of the assured.

Third—That notwithstanding the incidental loss, many persons, for trifling causes, allowed their policies to lapse, where, if additional inducements or special rewards were offered to those who continued, the widows or estates of many assurers would secure benefits which would otherwise be often lost to them.

The system was attacked by nearly every company then in active business, but has since been adopted by *every leading company in the United States and Canada*, and by companies in Great Britain and Australasia; and to-day, this system is popular throughout the civilised world. Thousands of the Society's Tontine policies have matured during recent years, and have returned larger profits than can be shown under any other form of Life Assurance; and the publication of the results has greatly increased the business of the Society. * * * Under the Free Tontine policy the assured has absolute freedom as to travel, residence, and occupation after one year from the time of assurance. The Society will not accept those already engaged in dangerous occupations or already residing in tropical regions at the ordinary rates. They will be charged extra rates, and those contemplating dangerous travel or occupation will be prevented by the one year of probation from insuring under this form, except at extra rates. Those, however, who happen casually to undertake such dangerous travel or occupation, after having been assured, will enjoy absolute freedom and protection without the payment of any extra premium, but an extra charge is, of course, made for military and naval service in time of war. Every free Tontine Policy may be surrendered at any time after being three years in force, and a paid-up policy issued in lieu thereof for a liberal amount, duly fixed by the rule laid down in the statutes of the State of New York. In the case of Limited Premium Life policies and Endowment Policies, after premiums for three years have been paid, Paid-up Assurance is granted for as many parts (fifths, tenths, fifteenths, twentieths, &c., as the case may be) of the original amount assured as there shall have been complete annual premiums received by the Society. For example, a 10-years Endowment Policy for £10,000 may be surrendered after three years for a paid-up policy for three-tenths, or £3,000; after four years, for four-tenths, or £4,000; and so on. * * * * Of 1,669 death claims paid in 1889, more than *one-half* (1,018) were paid *the very day* proofs of death were received; while more than *four-fifths* of the whole were paid within ten days, and if some of the payments had not been delayed by the failure of the beneficiaries to prove their title or to submit their proofs in proper form, the Society would have been able to report the immediate payment of every claim." The Tontine system of assurance, plainly then, if these statements mean anything, is the system of the future. Already, we are told, 90 per cent. of the assurances effected in the United States are on this plan, and its popularity is on the increase.

### GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 13th inst., as derived from the returns of the Bank of Japan and the Yokohama Special Bank:—

| Day | Gold Coin. (Per *yen* 100) Siver Yen. | | Found Sterling (Per £1) Siver Yen. |
|---|---|---|---|
| 8th | 126.200 | A.M. P.M. | 6.2337 |
| 9th | 126.200 | A.M. P.M. | 6.2337 |
| 10th | 126.200 | A.M. P.M. | 6 2540 |
| 11th | 127.200 | A.M. P.M. | 6.2540 |
| 12th | 127.000 | A.M. P.M. | 6.2540 |
| 13th | 127.000 | A.M. P.M. | 6.2540 |
| Averages | 126.633 | | 6.2472 |

The above averages show for gold coin a decrease in value of *yen* 0.934 per cent., and for the pound sterling a decrease in value of *yen* 0.0273 as compared with the previous week.

### COUNT ITO AND THE RADICAL ORGAN.

THE *Jiyu*, principal organ of the Radicals, is resolved, if possible, to arouse hostility to Count Ito among the members of its party. It relates a conversation said to have taken place between the Count and a certain friend, in which the former, adopting the boastful tone which the *Jiyu* is pleased to attribute to him, but of which those that know him well find difficulty in recalling any instances, is reported to have declared that, numerous as the Radicals are, their ranks include but two men of any real promise, namely, Messrs. Kono and Matsuda. These two, the Count is made to say, if they had two or three years' training as local officials, might perhaps qualify for good positions in the Central Government. The *Jiyu*, crediting this story, is naturally very irate at the superciliousness shown by the President of the Privy Council, but we venture to doubt whether Count Ito ever made use of such language. The story is altogether incredible, and reflects as little credit on its inventor as on its publisher.

### SANITARY PRECAUTIONS.

IT is very satisfactory to observe that Her Britannic Majesty's Minister has readily lent his assistance to protect Japan against the ingress of cholera. The Notification just issued over his signature requires all British vessels, whatever their ports of departure or call, to receive a visit from the Health Officers on arriving in Japan, in order that it may be ascertained whether any cholera has occurred on board during the voyage. The vessels will not be called upon to show their bills of health. A simple declaration as to the occurrence or non-occurrence of cholera will suffice, we believe. Should it be found that a case has occurred, the ship will be treated as though she had sailed from or touched at a port declared to be infected. This procedure will not subject ships to any detention or inconvenience, but will decidedly strengthen the system of cholera prevention.

### MR. VARLEY'S PICTURES IN LONDON.

MR. JOHN VARLEY, a portion of whose paintings of Japanese scenery were exhibited last month in Tokyo and Yokohama, to the great pleasure of all lovers of art, has made a marked success in London. We learn privately that his paintings were eagerly purchased at prices which showed the public's appreciation of their merits. The press notices have been highly favourable. Painting contemporaneously with Mr. Varley during a portion of the latter's sojourn in Japan, was Mr. C. S. Fripp, of whose pictures we had not the pleasure of seeing any examples. The tastes of the two artists lay in different directions, for while Mr. Varley preferred landscapes, Mr. Fripp chose figure subjects. Their combined work must have made a delightful show when exhibited in Mr. Larkin's gallery, No. 28, New Bond street. The *Pall Mall Budget* says:—"Mr. Varley has been everywhere and seen everything. He takes you along the shores of Tokyo Bay, into the rice-fields where harvesting is going on, to the tombs at Nikko, by the lake at Yumoto; lands you outside one of the big hotels, or puts you on board among the fishing craft. The sea he also delights in, and the old temples, the pagodas, and the tea-houses are often his land-marks, and whether he paints sunshine or rain, he is equally happy in the portrayal."

### COLLECTORS OF JAPANESE ART OBJECTS.

THE last number of the *Art Journal* contains the following:—

Collectors of works of Art probably always indulge in the hope that besides the profit derived from the enjoyment of their possessions they may also obtain a good return whenever they way wish to realise them. There are few who regard them in the same light as Mr. Ruskin, who would no more have us expect them to increase in value than he would a horse out of which he had for years derived enjoyment and his money's worth of use. Some collectors, and they are not a few, are so exigeant that they look to reap far higher returns from this class of investment than they would readily rest satisfied with in the matter of stocks and shares. They demand an increase all aloag the line, and feel themselves aggrieved unless the rises in value far more than counterbalance the declines; these take no note of the return to them of interest in the shape of pleasure, and total it up against their possessions at a usurer's rate. Some again there are who look for the same enchancement, although they have bought with a tithe only of the circumspection they would exercise over the purchase even of a brewery share, perhaps without any more knowledge than that imparted to them by an interested vendor. An investment in Art, if it is to be made from the point of view of a good one, must be approached with as mnch care as one in a South-African gold-mine, or an American cattle-ranche.

Our attention has been directed to this subject by a notable instance of the profits which have just resulted from placing money in the Fine Arts. Few collectors of late years have been so confident of the prospective value of what they amass as those who have turned their attention to Japanese Art of the past. They have continued hopeful on the subject, in the face of many detractors who have failed to appreciate its qualities, and in spite of the moderate prices which have ftentimes been accorded to it when put to the test of ublic auction. As regards this latter, collectors have

Digitized by Google

afforded to disregard it, for so long as the classification of objects is left by the auctioneers to clerks who know no better than to string together and sell by the dozen precious little *bibelots* which have never been used to such savage treatment, their merits are naturally overlooked by the crowd, and the *cognoscenti* can acquire them at less than the price of a song. But when they are treated with the respect they deserve they always command their value in the auction room.

Remarkable evidence of this, and of what a good investment Art may be, has occurred at the sale which has just taken place of the Art objects of Mr. Burty. That gentleman was one of the large group of believers in Japanese Art which inhabits Paris. Possessed of much more taste than money, he could only manage, by living in a tiny flat in the unfashionable quarter of the Battignoles, and spending the least possible amount upon himself, to satisfy his passion for acquiring Japanese Art. He did not collect as an investment, but he was always ready to stand in the gate against unbelievers, and declare, "Well, you will see, the time will come when what I buy for francs will be worth louis." That time has arrived far sooner than he expected. His sudden death, a short while ago, caused his well-beloved treasures to be brought under the hammer. Admirably catalogued by M. Bing, the sale attracted buyers even from America and England. Many of the Parisians too, accustomed to the ordinary objects sold in the shops of the Boulevards at high prices, were amazed at the delicate beauty and refinement which characterized Mr. Burty's objects. The result was that in every department prices were reached which exceeded the expectations of the most sanguine: £550 for a small picnic set, £65 for a sword-guard, £50 for a tiny medicine case, were amongst the sums paid, and which in every case exceeded by many times what they had cost the owner. These turned his investment of fifty or sixty thousand francs into at least six times that amount.

The growing appreciation of the Art, added to the increasing difficulty of meeting the demand through the cessation of the exports of Art objects from Japan, warrants the belief that no more profitable investment is to be met with at the present time than careful purchases of genuine old Japanese wares.

The editor of the *Art Journal*, himself a connoisseur of no mean order in the Oriental field, is doubtless quite right when he describes as a good investment "careful purchases of genuine old Japanese wares," but he would have done well to add something of what is involved in following this advice. It amounts almost to a marvel to observe how folks otherwise sensible and square-headed, allow themselves to be carried away by the notion that any one, however deficient in training or experience, can become at once a successful purchaser of Japanese objects of *virtu*. We should say that, on a moderate calculation, an amateur seeking to become a fairly competent expert, must be prepared to pay about ten thousand dollars for his preliminary instruction. Reading books, studying catalogues, and inspecting collections are all valuable aids in their way, but until experience is actually bought by repeated and costly failures no solid position of discriminating knowledge can be reached. Without natural taste, too, it is probable that success can never be achieved, but as most persons who collect are impelled to do so by the urgency of this faculty, we need not insist on its possession. The main point is that whereas a man would not dream of purchasing silk, tea, or other every-day staples of commerce until he had duly qualified to discern the good from the bad, he will plunge cheerfully into curio buying where not only very wide knowledge and experience are essential, but where also hundreds of crafty dealers are on the watch to take advantage of this very recklessness. However, the public has always been *entêté* about such things. Probably there is question of some providential dispensation not appreciable by common mortals.

### ADVICE TO THE GOVERNMENT.

THE *Choya Shimbun* offers some very sound advice to the Government. It urges the importance of two points; first, that the composition of the Cabinet should be as homogeneous as possible, and secondly that the Ministers of State should not allow themselves to be influenced by every wind of political doctrine, but should remain at their posts so long as ever they retain the confidence of their Sovereign. The *Choya* suggests that Ministers have become impatient, and have ceased to be tenacious of office since they acquired independent fortunes. In former years they found themselves obliged to rely on the emoluments attached to their position, and were consequently reluctant to resign, but they are now men of private means, and consciousness of the fact renders them indifferent to the solid inducements of official life. Such a state of affairs has its advantages, no doubt, but if the pecuniary need of remaining in office does not supply a bond of cohesion, other considerations ought to deter Ministers from abandoning their posts too easily. As to homogeneiety, the *Choya* condemns all attempts to obey picturesque or romantic principles in organizing a Cabinet. Never was there a more divided Cabinet than the celebrated combination of all the talents brought together by Count Kuroda in 1889, and the *Choya* is evidently disposed to think that the idea of forming a Cabinet without any preponderance of the great clans, may now have resulted in a similarly loosely knit and inefficient body. There seems to us to be much wisdom in these remarks.

### OFFICIAL APPOINTMENTS.

THE following appointments are said to have been made on Monday:—

| Name. | Appointment. | Previous Position. |
|---|---|---|
| Mr. Hayashi Kaoru | Vice-Minister of State for Foreign Affairs | Governor of Hyogo. |
| Mr. Su Kohei | Governor of Hyogo | Chief Secretary of the Cabinet. |
| Mr. Nishimura Sutezo | Vice-Minister of State for Agriculture and Commerce | Governor of Osaka. |
| Mr. Yamada Nobumichi | Governor of Osaka | Governor of Fukushima. |
| Baron Watanabe Kyoshi | Governor of Fukushima. | |
| Mr. Okoshi Tōru | Governor of Shiga | Secretary of Nagasaki Prefecture. |
| Mr. Watanabe Chiaki | Chief of the Hokkaido Administration | Governor of Shiga. |
| Viscount Okabe | Minister Plenipotentiary | Vice-Minister of State for Home Affairs. |

Mr. Nishimura Sutezo, who becomes Vice-Minister of State for Agriculture and Commerce, *vice* Mr. Ishida, whose troubles with the House of Representatives are doubtless fresh in our readers' minds, served from May, 1887, to March, 1890, as Chief of the Engineering Bureau in the Department of Home Affairs. It will be a source of general regret that the name of Mr. Oki Morikata does not appear in the above list, for the hope was widely entertained that the hardship of his removal from the Governorship of Shiga would be speedily compensated by another appointment.

### FOREIGN PATENTS IN JAPAN.

ERRORS die hard. Speaking of the suit which has just been instituted in the Japanese Courts on behalf of a foreigner who seeks to obtain registration of a patent in Japan, a local contemporary denounces the injustice of the Japanese Government for refusing to extend this privilege to foreigners, and even goes so far as to declare that the refusal confirms the suspicion of a deliberate plan to benefit by foreign patents at the expense of their owners. No one who has taken the least trouble to inform himself should be in any doubt about the facts of this case. Nearly all the civilized States in the world have entered into a union having for its object the mutual protection of patents and trade-marks. Japan would willingly enter this union, but the existence of the extra-territorial system presents a fatal difficulty. To explain the meaning of the difficulty, let us take an object lesson. Suppose that Great Britain and Japan agreed to afford mutual protection to the trade-marks and patents of their respective subjects. Then British patents would be secured against violation by British subjects within British territory. But how would it fare with British subjects within the limits of the foreign settlements? Plainly the provisions of the English law of patents and trade-marks would not extend to British subjects in Yokohama, Kobe, Nagasaki, and so forth. In short Japanese patents, while enjoying protection in the United Kingdom and its colonies, might be violated with impunity by British subjects at the open ports. Special legislation on the part of all the Powers would be necessary to provide for this. To procure such legislation would be a task probably of years, and it can scarcely be expected that Japan should open negotiations for the purpose. The *impasse* is thus due not to any blameworthy reluctance on her part, but to the conditions created by the Treaties. As for the Englishman who is spending money on an attempt to establish a legal claim to patent his invention in Japan under the provisions of Japanese law, he must be a particularly sanguine person. It is true that the letter of the Japanese Law of Patents does not explicitly exclude foreigners from participating in the protection it affords. But it has always been held that the provisions of Japanese law apply to Japanese subjects only, and there does not appear to be the smallest probability that the Courts will take the extraordinary course of declaring that a foreigner is entitled to enjoy the privileges conferred by Japanese law without being subject to its penalties. The language of Her Majesty's Minister in Japan in a recent despatch to Lord Salisbury is sufficiently distinct:—"There are no remedies open to British subjects whose trade marks are infringed in Japan by Japanese subjects. Until a few years ago the Japanese Government did not hesitate, when cases of such infringement were brought to its notice by the diplomatic representatives of the country concerned, to lend its assistance in putting a stop to the practices complained of. Of late years, however, it has declined to interfere, on the ground that so long as extra-territoriality exists, and its own laws are not binding on foreigners in Japan, it cannot, in accordance with any express provision of law, compel its subjects to respect foreign trade marks."

### SAILING RACE.

ONE of the best sailing races over witnessed in the bay took place on Saturday, the boats competing being *Isabel*, *Petrel*, *Jessie*, *Sayonara*, and *Ajidaumo*, all of the B division of the Sailing Club's fleet. The start was made at 2.30 by Mr. Beart from *Daimyo*, and the two canoes, *Sayonara* and *Ajidaumo* were first across the line followed, within a few seconds, by *Petrel* and *Isabel*. *Jessie* by an inadvertence went on the wrong side of the flag-boat, and had to return and recross, a process not at all facilitated or expedited by the circumstance that she had to take in her spinnaker and luff up to do so. Over a minute and a half of most valuable time was lost by this. Once across, however, *Jessie* was kept going, and soon got up on the canoes, rounding the flag-boat at the end of the breakwater only a minute astern of *Isabel* and *Petrel*. The reach down to the mark at Kanagawa was a warm one for all, a fresh southerly breeze sending them along in fine order. Half way to the mark *Jessie* was up to *Petrel*, and despite some little luffing manœuvres she edged ahead and getting up to windward of *Isabel*, took the lead from her. She was first at the Kanagawa mark, *Isabel* next, *Petrel* third, and *Sayonara* fourth, *Ajidaumo* over a couple of minutes astern of the last mentioned. It hardly seemed when the leaders came about and laid for home, as if they could fetch, but in a few minutes the wind, which had dropped a little, freshened up again, and it became apparent that if *Daimyo* intended to place the officer of the day where he could time the finish she must bustle along. For *Jessie* was walking up at a great pace and off the Harbour works pier near the Railway Station *Daimyo* had to put her helm up and get out of the way. But by setting her gaff topsail the big cutter got the most that she could out of the little puffs that came out from the land, and was just able to drop her anchor outside the bathing barge when *Jessie* was not more than fifty yards from the line. *Jessie* got her gun just one minute before *Isabel* should have received hers had not the Club's musket, contrarily disposed, refused to go off. *Petrel* arrived twenty seconds after *Isabel*, and the question now was, could *Sayonara* save her time? She proved unable to do so, being twenty-three seconds to the bad on her allowance as a 13-rater. Mr. Campbell, however, pointed out after his arrival that he had reduced his canvas to rate only 12½, and had so notified the honorary secretary. On this rating his allowance would be 5m. 12s., being 43 seconds better than before, and he, therefore, should have first place, *Ajidaumo* coming in too late to affect the result. But attention having now been direct-

Digitized by Google

ed to *Sayonara*, it was seen that her mainsail did not reach within a foot of the lacing hole in the boom, and on the assumption that the spar was the same as before, the mere cutting down of the sail was not enough, as the measurement must under the rules be taken from the lacing hole. As the sail area had not been measured, by the official measurer, Mr. Beart, and as the rating was now disputed, it appeared necessary that the sails should be officially measured but we are unable to state what decision has been reached by the Committee. We append the official times :—

| | Break-water. | Kanagawa. | Finish. | Allow-ance. | Correct-ed Time |
|---|---|---|---|---|---|
| | | | | m.s. | |
| *Isabel* | 27 | 2.39.55 | 3.01.50 | 3.24.35 | — 3.24.35 |
| *Petrel* | 16 | 2.39.56 | 3.02.15 | 3.24.55 | 0.57 3.23.58 |
| *Jessie* | 16 | 2.40.40 | 3.01.20 | 3.23.35 | 0.57 3.22.38 |
| *Sayonara* | 13 | 2.41.10 | 3.04.10 | 3.27.30 | 4.29 3.23.01 |
| *Ajidaumo* | 12 | 2.41.10 | 3.06.35 | 3.31.40 | 5.57 3.25.43 |

### EXPORT DUTIES.

THE crusade against export duties is carried on vigorously by the *Keishin* Club and the vernacular press. The *Mainichi Shimbun* takes up the subject, and recapitulates the stock arguments, namely, that by reducing duties the conditions under which Japanese goods can be placed in foreign markets will be improved, the convenience of exporters will be materially consulted, and so forth. But the *Mainichi* adds a rider to the effect that, since foreigners will also benefit by the abolition of duties, some *quid pro quo* should be sought from them. We are surprised to observe that another and very important phase of the project is not touched at all by the Japanese papers, namely, the fact that the duty levied upon the bulk of Japanese exports does not affect their sale to any appreciable extent in foreign countries. During last year the total value of the exports upon which duties were levied was 35,986,240 *yen*, and the duties aggregated 1,433,672 *yen*. But of the former total, tea and silk—exclusive of silk manufacturers—figured for a sum of 23,064,101 *yen*, and the duties paid by these two staples amounted to 930,510 *yen*. Now Japanese tea and Japanese silk do not come into competition with similar articles in the West. Both are alone in their classes, and it would make no appreciable difference in the demand whether the tax of 560.014 *yen*—the amount paid last year by silk—were taken off or still levied on a trade of some seventeen millions; or whether the 6¼ millions of exported tea were cheapened to the extent of 370,496 *yen*. Reductions of 3⅓ per cent. in the price of Japanese silk and 5⅝ per cent. in the price of Japanese tea, are not going to influence the markets of Europe and America in respect of these two commodities. The members of the *Keishin* Club, being shrewd business men, doubtless understand all this very clearly, but the press has hitherto taken no note of it. If we rule out the items of tea and silk, the total value of duty-paying exports last year becomes 12,422,139 *yen*, and the total duties paid stand at 503,162 *yen*. Exclusive, therefore, of the two great staples, there is not much to deal with, and the object of the *Keishin* Club's crusade looks insignificant. We are entirely at one with the general purpose of the Club, but we cannot help thinking that discrimination may be exercised with advantage.

### STANDARD LIFE ASSURANCE COMPANY.

WE are informed by the agents, Messrs. Fraser Farley and Varnum, that the 65th Annual General Meeting of the Standard Life Assurance Company was held at Edinburgh on Tuesday, the 28th of April, 1891, to declare the results of the business for the past year, and to receive the report on the investigation of the company's affairs and division of surplus funds for the five years ended 15th November, 1890. The following results for the year ended 15th November, 1890, were reported :—3,390 new proposals for life assurance were received during the year for £1,802,209; 3,030 policies were issued, assuring £1,572,248; the total existing assurances in force at 15th November, 1890, amounted to £21,545,649; inclusive of sums re-assured with other offices; the claims during the year amounted, including bonus additions, to £627,125; the annual revenue for the year ended 15th November, 1890, amounted to £991,957; the accumulated funds at same date amounted to £7,488,625, being an increase during the year of £144,668. The total surplus of the five years was found to be £663,771, from which, after providing for the intermediate bonus already paid between 1885-90, and setting aside a further sum of £40,000 towards the reserve fund, which would now amount to £80,000, a bonus was declared, giving reversionary additions to the aggregate amount of £1,014,000. The rate of bonus to the colonial scheme is at the rate of 28s. per cent. per annum, being the same as on the occasion of last division in 1885, with an intermediate bonus at the rate of 20s. per cent. per annum for policies becoming claims between 15th November, 1891, and 15th November, 1895. It was also intimated that after this date the claims under all the Company's policies would be payable immediately on proof of death and title to the satisfaction of the Directors at the Head Office.

### THE RADICALS.

THE indefatigable Radicals, undismayed by their recent mishaps, held another meeting at the Koseikan on the 14th instant, an audience of some two thousand people assembling, partly doubtless to hear the speeches, but partly also to see the sport. Mr. Tatsuno Shuichiro was in the chair, and according to the *Jiyu's* report, he opened the meeting thus :—"You are aware, gentlemen, that when we held a meeting the other day, we had the misfortune to be ordered to disperse, and that, re-assembling on the 2nd instant, we met with the same fate even before the object of the meeting had been declared. Such a circumstance is unprecedented. For what reason the Government thus interferes with freedom of speech, I cannot tell. The newspapers on the Government's side with poisoned pen abuse our party. Some of them even go so far as to say that we have made a failure. Perhaps we have, but for my own part I confess that I have never before heard of a blind man criticising the correctness of other people's vision, or a deaf man the clearness of their hearing, or a dumb man their manner of talking, or a lame man their fashion of walking." The speaker then entered into a detailed criticism of the recklessness of "official newspapers," and was proceeding to assail the "Camera Cabinet," when the police warned him to be careful. Thereupon, changing the burden of his speech, he said that in days of unlimited monarchies in Europe there had been news agencies which became official instruments and supplied to all the journals in the country news favourable to the Government. They were not worth supporting, but, strange to say, they had been maintained, and the cost of their maintenance was taken from the proceeds of "the people's blood and toil," namely, that portion of the taxes known as the secret service fund. It was not to be supposed that such things could exist in a constitutionally governed country like Japan, but if they did exist, a medicine to heal the disease must be obtained from abroad. That medicine could not be found in European countries, according to the speaker, but where it might be found and what it was, he had no opportunity of explaining, for the police ordered him to desist, and amid many demonstrations of impatience from the audience, he vacated the rostrum. The next speaker was Mr. Uneshita Kumano. He attacked the Government with reference to the Budget, pointing out that whereas they had originally declared the impossibility of reducing the Estimates so much as a *sen*, without impairing the efficiency of the Executive, they had ultimately, after consultation with the Committee, agreed to a reduction of 6½ millions. He asked whether an administration whose practice and professions differed so widely, could be trusted, and he then proceeded to criticise as weak the action of the Government in respect of the Otsu incident, promising in conclusion that if the Radicals were in power, they would show a different record. Mr. Fukui Koji then spoke. His theme was the falling of blossoms and the rusting of blades. Cherry flowers disappear, while men's hearts are still filled with their beauty, but rust creeps on slowly, disfiguring to the point of contempt what was once bright and keen. The Radicals, he explained, had urged the Cabinet's resignation, believing that it would best consult its own reputation by retiring before rust and decay made themselves visible. He, too, had much to say about the journals that had attacked the Radicals' procedure. With characteristic discrimination he classed them all as official organs. Then came Mr. Mizuguchi Ichijiro, his theme being "words and deeds." The spirit of the Restoration, he said, had been government in accordance with public opinion; constitutional government, in short, though the name did not then exist. But to-day the name only existed, and the fact was the old despotic government. Cabinet responsibility was the pivot of constitutional government, but the present Cabinet was responsible to the Emperor only, not to the people. Ministers did not care though they ran counter to public opinion and forfeited the confidence of the nation. They oppressed their opponents, and muzzled free speech. "Did they not remember the fate of the Third Napoleon?"—which question the police answered by requesting the speaker to resume his seat. Mr. Kurihara Ryoichi expatiated on the same theme, distinguishing between personal responsibility and collective responsibility. If a Minister's views differed from those of his colleagues, it was very well that he alone should retire; but when there was question of a national blunder, the whole Cabinet must go out of office. He adduced from English and French history instances in support of his theory. The next speaker, was Mr. Takahashi Shonosuke, whose remarks about international relations provoked police interference, and immediately afterwards the meeting was ordered to disperse.

### A VOTE.

THE *Jiji Shimpo* has been inviting public opinion as to the person who, of the whole Japanese nation, is most worthy to be depicted in heliotype and issued in the form of a supplement to "the pink paper." Votes were called for, the lists to be closed on the 15th instant. Twelve hundred and thirty-nine people responded to the invitation—a remarkably small number—and the following was the result :—

| | Votes. |
|---|---|
| Mr. Fukuzawa | 970 |
| Mr. Miura Goro | 129 |
| Count Ito | 42 |
| Count Okuma | 18 |
| Count Katsu | 15 |
| Mr. Shibusawa Yeiichi | 15 |
| Viscount Yenomoto | 12 |

The list does not include the names of men who obtained less than ten votes. Indeed, under the circumstances, it might have been omitted altogether, we venture to think.

### ANTI-FOREIGN.

THE *Joi* spirit may be exhibited in two ways, says the *Choya Shimbun*: it may be a wholesale anti-foreign sentiment, or it may be simply a tendency to self-assertion and independence. The latter inclination should be planted in the bosoms of Japanese, in order to preserve their national rights, interests, and honour; but that the former should exist even in appearance among educated and highly placed persons, seems to the *Choya*, very extraordinary. It roundly condemns the use, by leading journals or publications said to be the organs of political bodies, of such epithets as *Yoi* (洋夷), Western barbarians, *Ryokugan-ji* (綠眼兒), blue-eyed urchins, and *Sekizen-do* (赤髯奴), red-bearded fellows. What impression will the employment of such terms produce upon foreigners who understand them, asks the *Choya*. Then again, some are so hot-headed as to preach a crusade against the employment of foreign ship-masters; others denounce the missionary schools, and some even go so far as to find fault with the charities of Christian missionaries. Yet, strange to say, the writers who formerly gained notoriety by a display of this form of the *Joi* spirit are the very men to

Digitized by Google

clamour most loudly against Tsuda Sanzo, to urge the despatch of an ambassador to Russia even after the Czar has deprecated such a step, and to cry out for the resignation of the Cabinet on account of the Otsu incident. Careless how much insult they lavish upon foreigners in times of tranquillity, content to let their organs treat Westerns with contempt and disrespect in quiet seasons, they fall into a state of trepidation and nervous anxiety on behalf of the empire's foreign relations when anything unusual happens.

* * *

We understand this outspoken article. It is directed primarily against the *Nippon*, a journal which has done much to foster an antiforeign feeling, and which showed itself for a time conspicuously busy in attempting to extinguish the fire it had kindled. We do not think of charging the *Nippon* with any deliberate attempt to revive the *Joi* spirit, or even to promote dislike of foreigners. Its object has simply been to start a reaction against the wholesale adoption of foreign institutions and against the national self-effacement incidental to such a mood. Neither do we think that any anti-foreign feeling, in the old sense of the term, has been excited. The outcome of the writings and sayings of the Nationalist Party (the *Kokusui-hozon-to*), speaking generally, is limited to a self-assertive disposition. Different persons, however, have different methods of asserting themselves, and sometimes the methods adopted may bear a dangerously close resemblance to those of pre-Restoration days. Tsuda Sanzo, however, was not a case in point. His attempt upon the life of the Czarevitch was prompted by special considerations which might have influenced him whatever was the nature of his feeling towards foreigners as a body. His crime has been spoken of as an anti-foreign ebullition, but such a description merely illustrates the carelessness so often displayed by foreign writers in discussing Japanese affairs. The difficulty confronting the leaders of the nationalistic movement is that the zeal of their propagandism imparts itself to their followers without the restraints that accompany it in their own case. Nobody supposes that when the *Chiusei Nippo* indites scathing editorials against the victims of "foreign intoxication," Viscount Torio, whom the paper represents, is to be suspected of seriously seeking to sweep away Occidental civilization and everybody or everything connected with it. And when periodicals like the *Kokumin-no-Tomo* and the *Kassekai* follow the lead of the two Viscounts (Torio and Tani) people of discernment understand that there is question only of preserving what Japanese conservatives deem good, and that no notion, however remote, is entertained of resuming an attitude of national isolation. But the movement is undoubtedly carried to dangerous lengths, and journals like the *Choya* do a public service when they counsel the expediency of caution.

## THE "KOLAO HUI."

RECENT events in China have brought the *Kolao Hui* into such prominence that few of our readers are are ignorant of the fact that it is a secret society, suspected on the strongest grounds of being at the bottom of the anti-Christian riots. A proclamation issued on the 5th inst. by the Viceroy of Nanking shows us something more of the society than we have hitherto known.—"The members of the *Kolao Hui*" says the Viceroy, "appoint their own leaders, secretly engrave false seals, distribute pieces of cloth (as proof of membership), make recruits, and commit crimes contrary to the established laws. Their guilt cannot be expiated even by death punishment. I have taken steps to discover and arrest them in every direction. Once captured and convicted the members shall suffer instant death in accordance with the special laws which have been framed to punish secret societies without mercy being shown. Still in the Kolao Society there are plenty who are willing members, but at the same time there are also many ignorant people who have been duped and misled. These joined with the expectation of being assisted with money and food and clothing, and of being backed up in cases of disputes. They trusted blindly to the society's promises, and bought the cloth ticket. It is true that to enter the society is itself a crime punishable by the laws, but taking into consideration that their original intention was excusable and that they have only stepped into a trap prepared for their destruction, I am unwilling that the jade and stone should be indiscriminately consigned to the fire (the actually and apparently guilty should be equally punished) just at this juncture of making arrests. Therefore by this proclamation I notify you, people of all classes, to take warning. Those who have bought the cloth ticket to become Kolao members, should take the earliest opportunity to retreat, burn the cloth ticket, repent, turn over a new leaf, enter into some other occupation, and become good subjects, so as to save their lives, or hand the cloth ticket to the authorities, who will do the burning. Any one secretly informing the officials as to who the Kolao leaders are, when these are convicted, not only will be exempted from punishment, but will be heavily rewarded. Even if the leaders should themselves truly repent and come forth, their past conduct will not be inquired into."

## KOREAN LEGENDS.

### THE TANGUN.

FIVE thousand years ago while the peninsula of Korea was as yet inhabited by only savage beasts, and still more savage men, a wonder appeared in Heaven. The son of the great Buddha, afflicted with Divine ennui, stood before his father's throne, and asked permission to take upon himself an earthly form and rule over an earthly kingdom. Permission was granted, and the fiat went forth. Meanwhile, another wonder was seen, but not in Heaven. In the heart of the primeval forest of northern Korea, in a gloomy cave on the side of the Pak Tou (white head) mountain, a bear and a tiger met and held a colloquy. "Would that we might become men" they said, and even as they spoke they heard the voice of the Great Buddha saying, "Here are twenty bunches of garlic for each of you. Eat them and keep yourselves hidden from the light of the sun for twenty-one days and you shall become men." They ate and went far back into the inner recesses of the cave to stay in total darkness for the allotted time, but the tiger by reason of the fierceness and impatience of his nature could not enduce the long restraint, and wandered forth with his beastly nature intensified so that he is the greatest enemy to man.* But the bear with greater faith and patience remained the allotted time and then stepped forth into the sunlight a perfect woman. As she sat beneath the shade of an ancient cedar by the stream the only thought in her heart was that of maternity, and the only words her lips framed were "Would that I had a son." As she sat thus lovely but melancholy there passed her on the wind the spirit of Buddha's son seeking earthly form. It beheld her there alone, sitting by the stream and stopped in mid-career. It circled round her, breathed upon her, won her; and her cry was answered. She cradled her babe in moss beneath that same ancient cedar by the stream, and there, in after years, when he had grown to manhood, a band of savage natives found him sitting in deep and holy contemplation. They made him their king. Such is the story of the Tangun, the man, half beast, half divine. He reigned two thousand years, a divine day, and there went back to his father.

### THE FOUNDING OF SILLA.

Two thousand one hundred years ago the peninsula of Korea did not consist of one consolidated kingdom, but was split up into a large number of petty states. In the north was one comparatively large kingdom which extended far beyond the present limits of the country, but in the south there were over seventy little states each consisting of one or two hundred square miles. In those days an army of thirty men was considered well-nigh invincible. Six of the most powerful of these, little kings met in the south eastern part of the land and consulted in regard to a consolidation of forces. They decided to unite and form one powerful kingdom but they could not make up their minds as to who should be king. At last they agreed upon a youth named Hyok Kaw Say. And who was Hyok Kaw Say? Some years before his appointment as King a remarkable event occurred. A party of people were strolling in the forest on a mountain side in Southern Korea when they were terrified by seeing before them a powerful white horse that appeared to be sitting upon a large oval luminous body. When the horse saw the men it uttered a great cry, and rose straight in the air and disappeared in the clouds, leaving the luminous egg-shaped body on the ground. For a long time they were afraid to go near it, but finally their curiosity got the better of their fears and, approaching it, they found it was in reality a great egg. They carried it home and at last, finding that nothing came of it, they proceeded to break it with an axe. At the instant the blow was struck there came a terrific clap of thunder and the whole heavens seemed ablaze with lightning. The shell parted and out stepped the most beautiful child that had ever been seen. A few days later another marvellous event occurred. As someone was drawing water from the well of O Yong* he looked up and saw a hen lift its wing and out from its side came a beautiful little girl. There was only one defect in her beauty. She had a hen's bill instead of a mouth, but when they bathed her by the spring the bill fell off and she had a human mouth. So that spring is called to this day the Palchun spring, or "the spring where the bill fell off." The peculiar origin of the boy and the girl seemed to point them out as being fitted for each other, and so when they had attained a suitable age they were married. They were celebrated for their remarkable intelligence and goodness, and this together with their strange origin caused them to be selected as the King and Queen of the new Kingdom of Silla. Such was the foundation of the Kingdom of Silla, which lasted nine hundred and ninety-two years, during the last two hundred and seventy of which it controlled the whole peninsula.

* The Korean tiger is very destructive, often entering large villages and breaking into houses to satisfy his thirst for blood.

## NEWS FROM CHINA AND THE SOUTH.

IN consequence of the trouble that has arisen between the civil and military authorities in the Straits Settlements (chiefly caused, it is alleged, by the arbitrary acts of Sir Chas. Warren) the celebration of the Queen's Birthday at Singapore was shorn of much of its splendour, no regular troops being allowed to attend the review on the Esplanade. The Volunteers, however, turned out and were reviewed by the Governor, Sir Cecil Clementi Smith, who afterwards presented to them the battery of four Maxim guns with full equipment which, by the liberality of the Sultan of Johore and leading residents, had been procured for them. A ball in honour of Her Majesty's Birthday was given at Government House. * * * Sir Charles Warren's unpopularity in Singapore has received poetical expression in a piece entitled "Give Charles another Job." * * * The Directors of the Hongkong and Shanghai Bank have appointed Mr. F. de Bovis Chief Manager. * * * The *Straits Independent* fears the advent of a serious commercial crisis at Penang owing to overtrading and reckless speculation among Chitties and Chinese traders there, and partly blames the bank for not checking them in time. * * * The new steamer *Esmeralda*, for the China and Manila Steamship Company, arrived at Hongkong from Glasgow on June 6th under the command of Captain Thom, well-known on the China coast. Mr. Andrew Johnston, who superintended the engineering construction, came out with the vessel. The *Lightning*, a fine new steamer of 2,000 tons, for the Hongkong-Calcutta line of Messrs. Apcar & Co., and the *Tatung*, the first of five steamers to be built for the Northern trade of the China Navigation Co. have also arrived at Hongkong. * * *

* Chinese equivalents for the native names. When the Chinese brought their language and literature to Silla many names were changed and Chinese substituted.

Digitized by Google

The members of the Hongkong Cricket Club have decided to enlarge their pavilion at a cost of $1,400. * * * The Kaiping Mining Company are said to be doing well and extending their business. The latest concession to the Company is from the Viceroy Li Hung-chang, who sent a despatch to the Governor of Canton asking him to allow the Company to have a coal depôt at Canton, which has been granted, and a piece of Government land has been placed at their disposal, where suitable sheds are to be erected to store coal to supply the ships of the Southern Squadron. * * * China papers report that in making some excavations in Hangchow a large coffin was unearthed. The coffin contained a dead body, which was in no way decomposed, clothed in a yellow satin robe embroidered with dragons, with a gold shoe of sycee in each hand. The crown and boots were thickly covered with good-sized pearls. Many white jade ornaments of the Han dynasty adorned several parts of the body. The oldest inhabitants recognized the body as that of a prince of the Taipings. The workmen were quick in making away with the spoils of the dead. A military official seized upon the coffin, which bears no sign of having been underground for a generation. By the time the owner of the ground appeared he had only the pleasure and satisfaction of burying the now nude and fast putrifying corpse of a once terrible leader of the Taipings. * * * In reference to a rumour to the effect that the National Bank of China had suffered and was about to liquidate, the *Hongkong Daily Press* says:—We are assured that the affairs of this Bank have not suffered in any way and are progressing satisfactorily. Mr. Playfair, late of the Oriental Bank, has been appointed manager in Hongkong. The Bank's new premises are progressing with all speed, and it is expected that they will be finished in about two months, and that the regular business will then commence.

### THE MURDER OF FOREIGNERS IN CHINA.

WRITING editorially on the riots at Wusueh and Kiukiang the *N.-C. Daily News* of the 9th said:—As the *Tehhsing* was on her way up the river on Saturday morning early, having just passed Wusueh, the compradore came to the captain, Mr. Cain, and handed him a piece of brown paper which had been given to the compradore at Wusueh, where there is a passenger station. There was written on the paper a despairing appeal to any steamer captain into whose hands it might fall to rescue some women and children who were in peril of their lives. Captain Cain turned back at once, and took on board three ladies and four children who had escaped, in little more than their night-dresses, from a riot the previous night, in which their houses had been burnt down and the only two foreign men who were at Wusueh had been barbarously killed. Captain Cain made a futile attempt to recover the bodies, and Captain Davis of the *Fuhwo*, to whom Captain Cain communicated the news, tried to land at Wusueh for the same purpose, but was not allowed. Surely this pathetic story will rouse our Governments at last. As long as only property was burnt and destroyed, and the men and women were merely frightened and driven away from their homes, the Ministers might be content with sending in a collective note to the Tsung-li Yamên—if they have even got as far as that—with vague threats of something terrible if China did not properly protect foreigners. But when it comes to the atrocious murder of perfectly innocent people, and putting harmless ladies and children into a state of terror which will probably leave its effect on them all their lives, something more than a collective note is wanted.

* * *

The story of the murder of the two Englishmen at Wusueh is thus told by the *Shanghai Mercury*:—

The terrible events at Wusueh on Friday last originated by a Chinaman going home from Kwang-chi with four native children and saying that they were sent to Kiukiang to be cut up and used for medical purposes. This cry being taken up by a huge mob, which had congregated outside, the riot at once began. Mr. Argent was the only gentleman belonging to the mission then in the place, the other men being all away on their duties in outlying stations. He was surrounded by thousands of infuriated fanatics, bent on mischief, and one man in such a struggle could not last long. Mr. Green, the only Foreign Customs Officer in the place, hearing of the riot, bravely went to the missionary's assistance, but even two men could not do much against such overwhelming odds. The details of this desperate attack and, still worse, hopeless defence will probably never be known, as the only two men who could be relied upon to give a correct or truthful narrative perished. The crowd, armed with all sorts of improvised weapons, pikes, swords, sticks and stones made short work of them. Mr. Argent, who fell first, was murdered at the entrance to the little chapel, wherein his labours had lain, while Mr. Green, probably after the other's death, and seeing the hopelessness of the situation, gallantly endeavoured to fight his way back through the seething mob of villains yelling for his blood. That he made a desperate effort to reach the Customs Station is evident from the marks of the struggle upon his hands—he had only his bare fists to depend upon—and the number of wounds he received before he fell beaten and helpless amongst his barbarous and brutal enemies, four or five hundred yards from where Mr. Argent already lay wreaking in his blood. Meanwhile the head Chinese official at the Custom House had gone to the missionary dwelling-houses and there found Mrs. Bowden, Mrs. Warren, and Mrs. Prothero, with four little children, expecting in terror every moment to be murdered. But this official, who deserves great credit, managed after great difficulty and danger to get them to his yamên, where they remained in comparative safety, but in the most awful state of distress and suspense, till the next morning, when the welcome sight of the *Tehsing* raised their hopes, and they were conveyed on board by devious ways and through back streets for fear of another attack, the official escorting them to the jetty. The chapel was completely looted, while Mr. Bowden's home is entirely burnt and Mr. Prothero's also partially destroyed.

The *Palos*, which left here for Wusueh, immediately on her arrival from Shanghai, has now returned and reports the result of the inquest upon the bodies of the two English victims of the Chinese rebels to have been "murdered by a riotous mob," seven of whom are now under arrest in chains at Wusueh, along with the miscreant who brought the children into the place and so caused the outbreak. The officials are in a state of great excitement and abject terror over the affair. Mr. Argent was evidently killed by a blow on the back of the head, about five inches long evidently inflicted with a block of wood or stone. The jaw was broken and the face terribly cut and hacked, he also had received a serious wound on the foot. Mr. Green, who had evidently died hard, was shockingly mutilated having been literally hacked to pieces. It was an awful piece of butchery. His body bore at least a hundred wounds, having been stabbed all over, and I am informed that fully one half of these wounds were probably sufficient to have ended fatally, each by itself. His face was hacked in every direction, his nose and jaws smashed in, and the back of his head mashed to pulp. He had four huge stabs in the abdomen, while the flesh of both hands over his knuckles was completely stripped off and the bones laid bare, showing that he defended himself with his hands alone. Let us hope that a good many felt the weight of them before the cowardly butchers overcome him. It was a shocking sight to see his mutilated corpse stretched in the roadway where he had fallen amidst the inhuman monsters of whose Government he was the good and trusted servant. He was a young man, about 28 years of ago, and was the sole support, I believe, of an old mother. When the *Palos* left every shop in the place was closed. Mr. Green's house was not touched. After the Chinese official had safely lodged the women and children in his yamên he went back to Mr. Green's assistance, but was badly handled and was dragged by the crowd along the streets to his yamên where the mob demanded the foreign women to be given up to them. But I am happy to say he manfully refused to do anything of the kind, and was in consequence again treated to a little personal violence, and also the mortification of seeing the rabble smashing up his furniture and house.

### ROAD MAKING ENTERPRISE IN CHINA.

A NOTABLE work in North China has just been brought within sight of completion—the rendering passable of one of the gorges leading to the Great Wall. In a memorial to the throne the Viceroy Li stated that "the Pass leading from Nank'ou through Chüyung Kuan up to the Great Wall is one of the great thoroughfares connecting Peking with Mongolia and the northern parts of the Empire. The mountainous region in this vicinity was regarded by former dynasties as a barrier against invasion, but under the enlightened influence of the present reigning family, a closer connection has been maintained with the vast extent of country lying beyond the Wall. As a consequence, the Pass is largely frequented by Mongolian Princes and tribute missions visiting Peking, while it is also the main route for the conveyance of mails and Government supplies to the border country on the North and North-west part of the Empire. For more than two hundred years it has never received any repairs on a large scale. Running for a distance of 45 *li* through an overhanging mass of high hills and precipitous cliffs, it became in summer and autumn a raging torrent, and in winter was a succession of frozen sheets of water which often proved fatal to man and beast. The pass came to be regarded with such dread by all travellers that some improvement in its condition was viewed as an absolute necessity. The great difficulty was the question of expense. Chihli being a province whose exchequer shows an annual deficit, no assistance was to be expected from public funds. Four years ago a conference of the district officers was held and among those present were the Prefect of Hsüanhua, the Sub-Prefect of Yênch'ing and the Magistrate of Huailai. Extensive inquiries were made amongst the elders and gentry of the neighbourhood, with the result that public opinion was clearly shown to be in favour of levying a contribution on passing animals for the repair of the Pass. Offices were accordingly established, and a toll of from two to ten *cash* was collected upon all camels, mules, oxen, horses, donkeys, and other animals passing up and down. Exception was, however, made in favour of horses on government service returning without a load as also of all beasts of burden carrying firewood or agricultural implements. The length of the pass was measured, and found to be 6,730 *chang* from Tungpotzu to Langwo. Having regard to the large quantity of stone and other materials required for such a vast work, it was soon found that the proceeds of the contributions from baggage animals were not large enough to warrant its being all undertaken at once, and it was therefore thought advisable to carry it on gradually in sections." A commencement was made and it was not very long before the Pass was reduced to a fairly level condition suitable for cart traffic, and then the contributions were considerably increased by imposing a levy upon vehicles. The work that remained to be done was still enormous. "Hollows had to be filled up, heights had to be levelled down, and in some places a long détour had to be made and an entirely new road constructed. From the 24th July, 1887, to the 9th of March, 1891, the tax stations raised 29,160 strings of cash, and a further sum of Tls. 600 was subscribed by the gentry and merchants of the neighbourhood. After deducting all expenses, there remains a balance of 3,500 strings of cash and Tls. 600. This would be quite inadequate to defray the cost of keeping the Pass in proper repair; and to meet this outlay, it is proposed to continue the levy upon animals for several years until the proceeds reach the sum of Tls. 10,000, when it will be discontinued. Similarly, the tax upon vehicles will be continued until Tls. 5,000 have been collected. Both of these sums will be placed out at interest and applied to keeping the road in good repair."

### THE PETITION PRESENTED BY THE RADICALS.

WE have already related that in addition to attempting to bring influence to bear directly on Ministers of State with the object of inducing them to resign, the Radical party, or, to speak more accurately, certain members of the party having seats in the House of Representatives, addressed a petition to the Emperor on the same subject. The petition, according to the statements of several vernacular journals, was returned to its signatories, but this account of its fate is now proved to be incorrect. What really happened was that His Majesty returned the following answer through Mr. Inouye Ki, Chief of the Bureau of Imperial Private Records:—"The appointment of the Ministers of State being a part of the Imperial Prerogatives defined by the Constitution, the purport of the Petition cannot be adopted." Concerning this answer, forwarded to the petitioners on the 16th instant, a curious misconception gained credence, namely, that matters bearing on the Imperial Prerogatives could not be made the subject of petitions. The *Tokyo Shimpo* exposes the error of this notion. It explains that peti-

Digitized by Google

tions relating to matters that do not fall within the Imperial Prerogatives would be obviously absurd, since the Emperor cannot deal with such affairs. It is precisely in respect of affairs over which, as being concerned with the Prerogatives of the Crown, the Constitution gives control to the Sovereign, that His Majesty may properly be petitioned. To grant pardons or revoke powers conferred by him is essentially the Emperor's right, and petitions praying His Majesty to take steps of this nature, are natural and logical. The real import of the Imperial reply is that His Majesty cannot consent to take a petition from a small section of his subjects as a sufficient reason for removing from office Ministers of State who hold their commissions directly from the Crown. In other words, the Emperor informs his Radical petitioners that, even as he chooses and appoints his own Ministers, so he reserves entirely to himself the right of deciding upon their removal or replacement. To bid the Cabinet resign simply because a few Radical members of the House of Representatives, without consulting the House itself, recommend that course, would be a principle of government wholly opposed to the Constitution. Thus considered, the Emperor's answer will be found satisfactory from the point of view of the Ministers. It identifies them with the Throne in a manner and to a degree never before officially announced, however well understood by students of the Constitution. The *Tokyo Shimpo* further alleges that the petitioners have reason to be grateful for the language in which the Imperial reply is couched. It has not hitherto been the custom to assign any reason for the rejection of petitions addressed to the Government or the Throne. The rule has been to return the document with a simple announcement of refusal. But, on the present occasion, the Emperor has been graciously pleased to assign reasons for his inability to adopt the suggestion offered, thus establishing a precedent plainly intended as a mark of consideration for the petitioners in their capacity of members of Parliament.

## PRINCE GEORGE OF GREECE.

THE so-called official account of the Otsu affair published in St. Petersburg, repeats the error originally circulated here to the effect that when Tsuda Sanzo raised his sword a second time to strike the Czarevitch he was felled to the ground by Prince George of Greece before he could accomplish his murderous purpose. The sensation produced in Russia by this intelligence seems to have been great. Reuter, telegraphing to *The Times* from St. Petersburg, under date May 13th, says :—

All the Russian newspapers are loud in their praises of the gallant act of Prince George of Greece in attacking the assailant of the Czarevitch with his stick and knocking him down, thus probably saving the life of the heir to the Imperial throne. The Russian people, it is declared, will never forget this of the Prince.

The news of the attempt on the life of the Czarevitch, which only became known in St. Petersburg at 4 o'clock yesterday afternoon, created intense excitement, which gave way to a feeling of profound rejoicing when it transpired that the life of the Prince had been preserved.

It will seem very strange to many persons that whereas Prince George had nothing whatever to do with the disabling and arrest of Tsuda Sanzo, such action as the above should have been official attributed to him, but the fact is that the Russian officially telegram agency evidently received no information from the Government, and was obliged to pick up intelligence from outside sources as best it might. Writing as late as May 17th, that is to say six days after the incident, the St. Petersburg correspondent of *The Times* sent the following :—

Russians have had to gather the news of how the Heir Apparent to the throne was attacked in Japan chiefly from foreign newspapers and telegraph agencies. The first news of the accident to the Cesarevitch reached the authorities here on Monday night through the Japanese Legation, but not a word of it was disclosed until late on Tuesday night, when telegrams from Reuter's Agency, with more details than were published here by the official *Gazette* only on Wednesday morning, were already lying in St. Petersburg under the ban of the censor. The Russian official telegram agency was actually obliged to telegraph to London more than once to ask for particulars, which neither the Court nor the Japanese Legation would communicate, and which could only be received here at the risk of being considered unfit for publication by the eccentric censor of the telegraph department and suppressed accordingly.

The few lines published in the official *Gazette* satisfied nobody, and the Japanese representatives were afraid of communicating anything more to the Russian Press. Unlike their colleagues in other European capitals, they judged it proper to assume the same air of mystery and ignorance as that affected by the Russian authorities to whom they are accredited. The consequence was that the Russians formed their own suppositions of the occurrence, mostly based upon the suspicion that the assailant of the Cesarevitch must be an escaped Nihilist from Saghalien or Siberia disguised as a Japanese, or a Japanese in the pay of the Russian revolutionists. Not a word on the subject could be sent from here except the meagre official *communiqué*, and then only when this had been semi-officially telegraphed abroad. The repressive machinery of the Russian Telegraph Department has now reached such a pitch that not only incoming but also outgoing Press telegrams are detained for days together without the least cause, reason, or explanation, and words are struck out for which no offer is made of returning the money. Absolutely no redress can be obtained, and the worried newspaper correspondent is simply told that it is utterly useless for him to complain, as he will only receive misleading or completely mendacious explanations from the conflicting officials. This is at least frank enough it must be confessed, but it is also disgraceful.

* * *

Perhaps the most curiously ignorant account was published in Paris. "French official telegrams," we read, "received from Tokyo concerning the attempt upon the life of the Czarevitch state that his Imperial Highness had crossed Lake Biva in a boat called the Juirinska, which landed him at Otsu, whence he proposed journeying to Kioto. Shortly after landing, however, the Czarewitch was attacked by a police officer, who gave him a sabre cut on the head. The man committed the act in an excess of fanaticism, and is believed to belong to the Samurai sect, who are very hostile to foreigners." The conversion of a *jinrikisha*—or a Juirinska as the account has it—into a boat, and the reference to the Samurai as "a sect" who are "very hostile to foreigners," are unique blunders in their own way. It is plain that telegrams containing such absurdities cannot have had an official origin, although they are so described. We are almost inclined to think that they must have emanated from the office of the local newspaper called *Le Japon*, which has earned quite a circus reputation in connection with the Otsu incident.

* * *

The painful anxiety shown by the Japanese nation about the probable effect of the Otsu outrage upon foreign public opinion, ought to be considerably allayed by the tone of the newspapers now received. *The Times*, in a leading article published on the 16th of May, says :—

The attack upon the Cesarevitch in Japan has hitherto presented itself as a somewhat obscure and inexplicable incident. The Japanese are a polite and mild-mannered people, who since they became familiar with the aspect of Europeans, and still more since they took to copying European dress and habits, have shown scarcely a trace of the intolerance that is still rampant in China. It was therefore very difficult to understand the wounding of so distinguished a visitor as the Cesarewitch, travelling with the fullest public recognition of his rank; and the difficulty was increased by the meagre and contradictory character of the reports that reached Europe. Most people in this country gave up the riddle as insoluble, and fell back upon a feeling of thankfulness that the Cesarewitch accomplished his journey through India without any incident of so unpleasant a nature. Among the heterogeneous population of the great towns of India are to be found occasional fanatics whose movements it is equally impossible to foresee and to control. Lord Mayo's lamented death by the hand of an assassin is evidence that an exalted position and a numerous retinue do not always confer immunity from attack, yet had anything resembling this Japanese incident occurred in India it might have been difficult to convince the Czar that the Government was blameless in the matter. There is not even yet any authentic statement of the circumstances in which the Cesarevitch came by his wound, although it is now happily clear that the wound is not dangerous or even severe. Prince Bariatinsky has not made his official report, or if he has made it the world is none the wiser. One story has it that the Cesarevitch and his suite entered a Buddhist temple without removing their boots, and that the indignation of the Bonze caused a too impulsive guard to take upon himself the office of defender of the faith. But a Buddhist temple is one of the sights which the distinguished traveller would certainly be shown with all due ceremony and formality. We can hardly imagine him dropping in casually and encountering the astonished guardian inside. Another story current in St. Petersburg society is to the effect that the Cesarevitch and his attendants were in some place of public amusement, having apparently laid aside their official character in order the better to enjoy the fun. There they offended in some way against Japanese customs, and the policeman on duty, who seems to be an exemplary official of eight years' experience, interfered with what to us may appear an excess of vigour. To the student of human nature there is a verisimilitude about this version of the affair which is wanting in the others. Official receptions and ceremonious sightseeing undoubtedly become a weariness to the flesh. Nothing is more natural than that the Cesarevitch should endeavour to escape from the trammels and try to see the Japanese as they are in their happier hours. One can readily imagine the Cesarevitch in a character compounded of Midshipman Easy and the good Haroun Alraschid. There are two other reports entirely congruous with this view. One is that the Cesarevitch wishes his assailant to be dealt with by Japanese law, under which he will probably be acquitted: the other is that the Czar has telegraphed a severe reprimand to all concerned in the escapade. The young man is too generous to wish the poor policeman punished for doing his duty according to his lights, especially as he seems to have been rather badly mauled. The Czar is bound to reprove indiscretion, though he has probably made the private reflection that boys will be boys.

The account sent to the *Standard* by its Shanghai correspondent ought to re-assure the Japanese still more, since it is not disfigured by any of the inaccuracies of other reports. The correspondent says :—

The Czarevitch had gone to enjoy the picturesque delights of Otsu, a famous pleasure resort situated on the Biwa Umi Lake, about six miles from Kioto. The assailant was a native Japanese policeman, named Tsuda Sanzo, and he was able to strike at the head of the Prince with a sword. There is no room for doubt as to the murderous intent with which the blow was delivered; but, thanks no doubt to the toughness and thickness of the sun helmet which the Czarewitch was wearing, the wound inflicted was, happily, comparatively trivial. It is described as a "sword-cut on the side of the forehead, not serious." It is needless to say (the correspondent adds) that the Emperor of Japan and his Ministers feel most acutely this outrage on a welcome and honoured guest. The occurrence was, of course, as far as the sentiment of the country goes, a deplorable accident. It is believed that the man guilty of the deed is insane. Probably, brooding over some fancied wrongs, he was tempted into action by the casual presence of so illustrious a guest. Both the Emperor and his Ministers have hurried to Kioto to express their concern and sympathy, and it may be predicted that the Czarewitch will not carry away to Siberian soil a less pleasant impression of Japanese kindliness and grace by reason of the painful incident which marred the closing stage of his long tour.

## THE CONSERVATIVE MEMBERS OF THE UPPER HOUSE.

THE Conservative members of the Upper House who have been moving in company with the Radicals in the matter of the Otsu incident, find themselves the object of a somewhat embarrassing criticism. These noblemen—who go by the name of the *Horobasha-gumi*, or covered-carriage company, in allusion to the sumptuous circumstances of their lives—are said to have been very strongly opposed at the outset to the effusive welcome given by the nation at the Government's instigation to the Czarevitch. They saw no reason why the country should stand hat in hand before him, and why his travels through the land should assume the aspect of an imperial progress. But when the Otsu

Digitized by Google

outrage occurred, these same Conservatives took "a sharp turn" and began to cry out that the Government had been wanting in its measures of precaution and that nothing short of the resignation of the Cabinet *en masse* could atone for the outrage to the nation's honoured guest. This is what the Japanese call deploying one's forces after seeing the colour of the enemy's pennant. A certain Tsutsui Junkei of mediæval days acquired quite a reputation of skill in thus adapting his views to the convenience of the moment, and a witty Japanese has hit upon the term *Junkei-shugi* to describe the policy of the covered-carriage peers on the present occasion, thus adding to the language a capital equivalent for "opportunism."

### FATAL FIRE IN SHANGHAI.

On the morning of the 8th inst. fire broke out in a Chinese store at Hongkew, Shanghai, and in the effort to subdue the flames a foreign and a Chinese fireman were killed. An account of the affair says:—The flames having taken a firm hold of the building, the firemen were directed to play upon the walls. Lucien Descole, a member of the French Brigade, was directing a stream from a hose upon a wall, and was standing directly in front of it when the wall collapsed, burying the unfortunate Frenchman and a Chinese fireman who was assisting him. When extricated, he was dead. The corpse of the Chinaman was found afterwards. The deceased had never previously attended at a fire. Several other people, among them Mr. L. Moore and Mr. E. C. Pearce, had narrow escapes from falling *débris*. Mr. Moore was standing beside the unfortunate man who was killed when some one rushed him violently down the alley way from behind and so saved him. He then gave orders to ascertain if any one had been hurt, and was told that four Chinese had been buried in the ruins of the wall. The bricks were too hot to handle, so the hose was played on them, and cooled them sufficiently to allow them to be touched. On removing some of the bricks the helmet of a French firemen was found, and soon afterwards the body of M. Descole. Doctors were immediately telephoned for and the unfortunate man got out, a period of about fifteen minutes having elapsed since the falling of the wall. Dr. Reid, who was soon on the spot, pronounced that the French fireman was dead, he having been suffocated.

### MISCELLANEOUS NEWS FROM CHINA AND THE SOUTH.

Hongkong papers of the 12th report that the Mutual steamer *Moyune*, with the first teas, passed through Singapore on the 4th instant, after having taken in 800 tons of coals. She left Woosung at noon on the 28th May. * * * The death is reported from Java of Miss Amelia Santley, of the Stanley Opera Co. The cause of death is stated as being cholera. * * * Citizen George Francis Train arrived at Singapore in the *Frigga* on the 4th June, in time to catch the Mutual steamer *Moyune*, which passed through the same day. He was then twenty-five days out from the States. He was to leave the *Moyune* at Suez. * * * The *Straits Times* understands that the opinion of the Home Government is that fresh legislation is needed on the subject of the legalisation of marriages in the Straits. The points, of course, are those which have already been discussed at some length, and which are associated with the question of whether Bishop Hose is "the Anglican Bishop of the diocese" within the meaning of the Indian Marriage Act, 1865. The Home Government are not sure whether he is, and they have instructed the Straits Government to prepare and pass in the Legislative Council an Ordinance which will declare that Bishop Hose is to be deemed "the Anglican Bishop of the diocese" within the meaning of the Indian Marriage Act, and that people who have been married under his authority are to be deemed to be married, as if he had held a proper authority. * * * A three-cornered rifle match between Hongkong, Singapore, and Shanghai has fallen through owing to tardiness in making arrangements. * * * A letter has been received in Singapore from Lord Henry Bruce saying that he intended again to raise the question of the Straits Military Contribution on the second reading of the Appropriation Bill, which comes on at the end of the session. * * * H.M.S. *Pigmy* ran aground on Sulphur Point, Whampoa, during her passage up to Canton on Tuesday afternoon (9th). It appears that as the vessel was approaching the bend a junk got right in her way, and the only alternatives were to run down the junk, with a probable loss of life, or let the *Pigmy* take the ground on the soft mud. The pilot in charge, Mr. Speechly, adopted the latter course, and the ship was at once stuck fast. Efforts were made without delay to get her off the bank, and the *Pigmy*, favoured by the rising tide eventually got off and steamed on to Canton, reaching the anchorage off Shameen without further mishap. It is stated that she sustained no damage whatever.

### NAVIGATION BETWEEN JAPAN AND AUSTRALIA.

The *Keizai Zasshi* recommends Japanese capitalists to form a company for direct navigation between this country and Australia. It regards such an undertaking as of great importance for the development of commerce between the two countries, commerce which has now attained dimensions warranting the establishment of a direct line of steamships. From the table which our contemporary publishes, it appears that the total value of trade between Australia and Japan according to the latest statistics, is over a million *yen*, the principal staples of export from Japan being rice (523,600 *yen*), bamboo wares (28,239 *yen*), silk handkerchiefs (24,742 *yen*), mats (20,834 *yen*), silk cloth (17,666 *yen*), lacquer wares (10,898 *yen*), porcelain, coals, sulphur, etc.; while the principal articles sent over from Australia are wool (299,232 *yen*), hemp and flax, lumber, hides, etc. The quantity of exports from Japan during 1890 was 795,043 *yen*, and that of imports 334,238 *yen*; there being thus an excess of exports over imports to the extent of 460,805 *yen*. At present Japanese goods are carried to Australia by way of Hongkong and Singapore, and are thus obliged to make a circuitous route. By opening direct communication a great saving could be effected both of time and of expense, the ratio of distance between the present and the proposed lines being as 3 to 2. It is also predicted that the establishment of a direct line will lead to a development of trade with the various important islands on the Pacific, as New Canada, New Hebrides, Solomon, Samoa, New Britain, New Ireland, etc. In addition to an increase of tradal connections with these islands, there would probably be a tide of Japanese emgration thither, which is a great desideratum in the eyes of the *Keizai Zasshi*. Lastly the Government is asked to give the new line, should it be started, a reasonable amount of subsidy for carrying mails between the two countries.

### THE "KAISHIN-TO."

The *Kaishin-to's* meeting had the honour of provoking police interference to about the same extent as the recent gatherings of the Radicals, but the reports published by the press are so meagre that it is impossible to form any clear idea of the arguments advanced. One of the speakers, whose name is not given, made an attack upon Count Goto, but the audience declined to listen, and he had to abandon the rostrum. Mr. Yasuzumi Sataro took "suspension" as his theme, and proceeded to divide it into heads after the most orthodox fashion; namely, first, suspension of the Government's policy by popular intervention; secondly, suspension of a lecture by interruption of the audience, and thirdly, suspension of a speech by police interference. This last, of course, constituted the real gist of his address. He condemned the practice of suspending a speech before its conclusion—a pretty hibernicism—and illustrated his contention by citing the case of Matsubayashi Hakuyen. That person is now one of the most renowned *Koshakushi* in Japan. Recently, during a series of night entertainments at a theatre in Tokyo, he took for his subject the story of Nezumi Kozo, a celebrated robber. Among Hakuyen's hearers was a man who attended every night for fifteen days in succession, during which time his imagination became so influenced by the account of Nezumi Kozo's daring exploits and successes, that he himself embraced the profession of a thief and soon found himself in the hands of the police. Questioned by a magistrate, he avowed that Hakuyen's stories had overcome his moral equilibrium and driven him into the evil route of burglary. Hakuyen was accordingly summoned, but he said that he had never seen the man. On being informed, however, of the fifteen evenings' attendance, he exclaimed:—"How unfortunate! You came for fifteen evenings only, and the consequence was that you heard of nothing except Nezumi Kozo's good fortune. But if you had attended for fifteen evenings longer, you would have learned that in the end he had to expiate his crimes on the block, and the knowledge would have restored your moral equilibrium." This parallel was loudly applauded, and the constables on duty at the time doubtless profited by it.

### IMPERIAL ORDINANCE FIXING ESTABLISHMENT OF LOCAL ASSEMBLIES.

The following Imperial Ordinance has been issued:—

We hereby authorise the enactment of regulations fixing the establishment of City and Prefectural Assemblies, and order the same to be promulgated.

(Imperial Sign manual.)
(Great Seal).

(Countersigned) Viscount Shinagawa,
Minister of State for Home Affairs.

Dated June 9th, 1891.

Ordinance No. 9.

Regulations fixing the establishment of City and Prefectural Assemblies.

Art. 1.—In accordance with the Second Article of the Organization of City and Prefectural Assemblies, the establishment of such Assemblies is fixed as follows:—For districts of which the population does not exceed seven hundred thousand, the fixed number of members shall be thirty. For districts of which the population exceeds seven hundred thousand but does not exceed a million, the number of members should be increased by one for each additional fifty thousand inhabitants up to a million. When the population exceeds one million, a member shall be added for every addition of seventy thousand inhabitants.

Art. 2.—The number of members fixed by the preceeding Article should be divided between districts (*gun*) and towns (*ichi*) in proportion to the number of inhabitants.

Art. 3.—In the event of changes occurring in the fixed establishment of members or in the allotment among districts and towns, owing to increases or diminutions in the population, the regular time of election shall be awaited before making such changes.

### WHY?

The *Kokkai* asks why we recently published a verbatim reproduction of an English essay written by a little Japanese lad in a country school. We may be permitted on our side to inquire why the *Kokkai* asks such a question. Our contemporary intimates a suspicion that we intended to ridicule the boy's effort. If the *Kokkai*, judging by its own experience and tendencies, finds that a newspaper has leisure or inclination for such pettinesses, we cannot congratulate it. It is not our habit to devote our columns to holding up little Japanese school-boys to derision. In reproducing the essay we said that we did so "not for the sake of its halting English, but for reasons which need not be explained to those capable of appreciating them." The *Kokkai* apparently is not to be included in this category. Very well then; it remains only to tell the *Kokkai* that, despite its halting orthography, the school-boy's essay seemed to us to be full of grace and poetic feeling. The *Kokkai's* question is another example of the curiously, nay morbidly, sensitive mood by which some Japanese are possessed at present. They detect insults where none are intended or even dreamed of, and imagine that the masterful foreigner is sneering at or slighting them, where in reality

Digitized by Google

he may be sympathising and admiring. It is not well to be thin-skinned. True dignity is never aggressively self-assertive.

### THE DISTURBANCE AT A POLITICAL LECTURE IN YOKOHAMA.

THE speech delivered by Mr. Oi Kentaro on the 16th instant at the Tsuta-za in Yokohama, which led to the dispersal of the meeting by the police and to subsequent disturbance, was on the subject of Oriental Policy. The speaker maintained that the tranquillity of Japan was closely connected with the tranquillity of the Orient, and that the question of Eastern affairs pressed for immediate consideration. He explained that, speaking briefly, the Eastern question was comprised in the two words, peace or war, and he was going on to condemn the policy of hesitation hitherto followed by Japan, when the police inteferred and the meeting was dispersed. We cannot but regret that the authorities feel constrained, in the cause of national interests, to make martyrs of these Radical demagogues. Every interference by the police rouses public sympathy with the agitators, and confirms the impression that unless a great deal of tinder were supposed to be lying about, the feeble sparks struck by such persons as Mr. Oi Kentaro could not be really dangerous.

### FIRE.

THIS morning about twenty minutes to one o'clock fire broke out at No. 52, Main Street, in the premises of the British and American Tailoring Co., the upper flat of which was occupied as a residence by Mr. J. F. Dabbs. The fire seems to have been smouldering for some time, for it suddenly burst into a blaze, and in a very short time the whole of the interior of the building was a mass of flame. Mr. Dabbs was asleep at the time of the outbreak and was awakened by his wife, who smelt the fire. He managed to get her and his child out of the building safely, and himself returned to try and secure some papers, but the smoke was too dense, and he had to make his escape from a window at the back of the house. The "Relief" steamer was early on the spot and had a powerful stream of water playing on the fire, and soon six standpipes were in action, but even with this amount of water the building continued to burn for a long time, and though all chances of its spreading were overcome by half-past one o'clock, it was not till past two o'clock that the "Relief" and the fire station standpipes were able to leave the scene. The building was of a very frail nature, the walls being so thin that until the fire was fairly well got under no fireman could enter the house parts of which could constantly be heard falling in. It belonged to a Chinaman, was leased by Mr. L. Davis, from whom Mr. Dabbs rented it. The cause of the conflagation is not known, but it is supposed to have been a spark dropped from the pipe of one of the workmen. The stock and furniture were insured with the Straits Insurance Co. for $1,500.

### THE NEW MEMBER FOR YAMAGUCHI PREFECTURE.

THE vacancy in the representation of the second electoral district of Yamaguchi Prefecture, caused by the elevation of Mr. Inouye Shoichi to the Bench, has been filled by Mr. Furuya Shinsaku, who was elected by 476 votes against 69 obtained by his opponent, Mr. Isobe Koichi. Mr. Furuya was an unsuccessful candidate for a different district of the same Prefecture at the last elections, when he stood in opposition to Mr. Suyematsu Saburo and Mr. Yoshitani Kan-ichi.

### "KIRIN" BEER CUP FOR THE SAILING CLUB.

WE are glad to learn that the directors of the Japan Brewery Co. have recognised the importance of that branch of sport which is locally identified with the Yokohama Sailing Club, and have decided to present a cup to be sailed for by members of the Club. Boat-sailing in the Gulf of Tokyo was carried on in a very spasmodic way until the formation of the Club, and undoubtedly the "Kirin Beer" directors have shown both public spirit and a laudable desire to foster sport in now subscribing for the encouragement of what is perhaps the most enjoyable of all out-of-doors recreations. The cup, a solid silver trophy, is a piece of very tasteful though plain work, the ornamentation being almost wholly confined to the "Kirin" which supports the bowl of the trophy. It bears the inscription

YOKOHAMA SAILING CLUB.
1891
The "Kirin" Beer Handicap Cup.
Presented
By the Directors and Officers of the Company.
Won by ———.

The cup, which is valued at $50, will be competed for in one race, to take place on the 4th of July, and we hope the contest will be worthy of the prize. Among the ships of the fleet the 4th of July consumption of "Kirin" Beer ought to attain respectable figures. The cup is now on view at Messrs. Lane, Crawford & Co.'s.

### COUNT GOTO AND THE PRESS.

THE *Yomiuri Shimbun* has a delightful paragraph about Count Goto and the press. "Of late," says our contemporary, "several newspapers in the capital have been attacking Count Goto, but the impression produced upon the Count by journalistic assaults is as though one should touch him with a hair. He is absolutely indifferent. 'Crows will always caw,' he says, 'sparrows twitter and newspapers prattle.' There is not the slightest use in going for such a person. His assailants have only their trouble for their pains. If they must attack a member of the Cabinet, they will find it much more entertaining to choose some one who pays a little attention to them."

### NEWSPAPER CUTTINGS AGENCY.

AT No. 15 Yazayemoncho, in the Kyobashi district of Tokyo, there has been established a Newspaper Cuttings Agency (*Shimbun-Kirinuki Tsushinsha*) after the model of similar institutions in Europe and America. The Agency undertakes to collect and supply all comments that have appeared in the Japanese journals on any indicated subject. The plan has been found most useful in the West, and we have no doubt that the new Agency will prove of much service to all persons interested in journalistic comments or information.

### JAPANESE SHIPS FOR CHINA.

THE *Jiyu* affirms that, in connection with the recent riots in China, it was finally determined to send Japanese men-of-war for the protection of Japanese property in Shanghai, and that, acting on this resolve, the *Yamato Kan*, under the command of Captain Morooka, was despatched on the 14th instant. It is expected that she will be followed by two or three other vessels.

### THE STEAMER "LYDIA" IN COLLISION.

MESSRS. SIMON, EVERS & Co. inform us that the D.D.R. steamer *Lydia*, of the Kingsin Line, has been in collision and is badly damaged. She put in at Singapore for repairs, and discharged part of her cargo, all of which is in good condition. The estimated detention will be about a fortnight, after which the *Lydia* will continue her voyage to China and Japan.

### THE P. AND O. COMPANY.

A REUTER'S telegram dated May 16th quoted in Hongkong papers states:—The Peninsular and Oriental Company pays a dividend of five per cent. on preferred and seven on deferred shares for the past half-year.

### THE "OFFICIAL GAZETTE."

LIEUT.-GENERAL VISCOUNT SOGA SUKENORI is gazetted a Court Councillor, and Colonel Oshima Yoshimasa, of the Infantry, becomes a Major-General.

THE *Miike Maru*, Captain Macmillan, arrived on Thursday from Honolulu, which port she left on the 3rd inst. On that day the kerosene godowns took fire and were burning fiercely when the vessel left, with every probability of total destruction, together with their contents, 36,000 cases of oil.

AT the Queen's Drawing Room on the 6th May at Buckingham Palace, Mrs. W. A. Wooley, late of Bedford, presented her only daughter, Miss Maria Kathleen Wooley, and also Miss Evelyn Isabel Hampton.

AMONGST the passengers who arrived here on Tuesday by the *China* were His Excellency the Chevalier Martino, Italian Minister, and Sir James Russell, Chief Justice of Hongkong, who has come to Japan for the benefit of his health.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

During the present week, no single question has monopolized the columns of the vernacular press, its attention being divided between various topics of more or less importance. Upon the whole, things are quiet in the political world. The Cabinet, owing to the recent changes in its members, is now believed to have recovered stability, although some people do not hesitate to express dissatisfaction with its present *personnel*. The *Jiji Shimpo*, for example, insists upon the formation of a Ministry which shall include, among other statesmen, Counts Ito, Kuroda, Okuma, and Goto. It calls upon Count Ito to carry out this plan, as it believes him to be best qualified to arrange such matters. He is further told that the present is a rare opportunity for him to assume power. The Tokyo journal omits the names of Counts Inouye and Saigo from the list of the members of the contemplated Cabinet, because these two statesmen are universally believed to have retired from political life, the latter altogether and the former for some years. Count Ito and other statesmen of the elder generation are not young, and they are advised to accomplish something worthy of their names before they enter their dotage.

* * *

The instruction issued to Local Officials and Police by the new Minister of Home Affairs on the 15th instant, is upon the whole well received by the vernacular press. All the papers are glad that Viscount Shinagawa has taken so early an opportunity of declaring his policy in the conduct of home affairs, for they think that the instruction, though nominally addressed to Local Authorities, is really meant for the public in general. The *Nichi Nichi Shimbun* finds nothing to criticise in the document. After expanding the meaning of its principal points, our contemporary remarks that there is much less difficulty in drawing up a programme than in putting one into practice; and that in order to carry out the present instruction, the first requisite is that local officials should be men of sufficient capacity and intelligence. Should there be any not up to the standard, the Minister for Home Affairs is recommended to have no hesitation in replacing them by men of better qualifications.

* * *

The *Kokumin Shimbun* is quite satisfied with the document itself, but deplores the existence of circumstances necessitating the issue of such a paper. For our contemporary believes that, when read between the lines, the instruction reveals the fact that local officials are too prone to regard the system of local self-government in a bureaucratic light; that they give undue value to forms and routine; that they are not free from the charge of interfering with the affairs of private indviduals; and that police authorities do not always show impartiality and kindness in the discharge of their duties. The Tokyo journal observes that not only local officials but the Minister of Home Affairs himself are responsible for the successful carrying out of the excellent programme now enunciated.

* * *

The Radical organ, the *Jiyu*, though not particularly dissatisfied with the instruction, avails itself of the opportunity to criticise the fundamental policy of the Government with respect to local self government and police.

Digitized by Google

The system of local self-government at present in force, is regarded by our contemporary as tending to give too much power and prestige to the wealthy. The system which the Radicals desire to introduce is more democratic in character and more favourable to the poor. The *Jiyu* professes to detect in the document the hand of Count Ito, and regrets that the President of the Privy Council does not come out from behind the curtain and openly fight with the Radicals, who entertain political opinions quite opposite to his. As to the police, our contemporary complains of the arbitrary conduct of police constables in matters relating to politics and political parties.

* * *

With regard to the question of Treaty Revision, the public is in entire darkness as to the policy of the Government. Most people seem to believe that, with the resignation of Viscount Aoki, the matter has been shelved for the present at least. The *Nippon*, however, is now busily seeking to persuade its readers that the new Minister of Foreign Affairs is firmly resolved to devote his whole energy to the conduct of negotiations for the revision of the Treaties. But the writings of other papers on this subject show that they are far from crediting such a resolve on the part of Viscount Enomoto. The *Nichi Nichi Shimbun* observes that whoever undertakes the task of Treaty Revision exposes himself to difficulties of an unusual character. But considering the injuries and disgrace to which the present Treaties subject Japan, our contemporary thinks that the work of revision must be pushed on with all possible despatch. The plain course of policy for the Government under the circumstances, we are told, is to conduct negotiations on a basis approved by the people. The Tokyo journal finds it difficult to comprehend the reason why the present Cabinet and Viscount Enomoto hesitate to indicate their policy in respect to this important question.

* * *

The *Mainichi Shimbun*, discussing the same subject, dwells upon the fatal consequences of a fresh retreat on the part of the Japanese Government from the negotiations for revision of the Treaties. Should such a disastrous step be taken at the present juncture, Japan would be doomed to the humiliation of remaining under the existing state of things for many years to come. The present Premier, Count Matsukata, must have been consulted about the treaty programme of the former Minister of Foreign Affairs; and if so, his Cabinet must be held responsible for the carrying out of that programme. At all events, the new Ministry is bound, says the *Mainichi*, to make known the line of action it proposes to take in connection with this matter.

* * *

The Radicals have made another mistake in presenting a petition to the Emperor urging a change of Ministry, to which an unfavourable reply was returned through Mr. Inouye Ki, Chief of the Imperial Confidential Secretariat. This last move of the *Jiyu-to* is regarded by the public with no favour; even the Radicals' well-wishers shrug their shoulders when the affair is mentioned. The *Nichi Nichi Shimbun* does not hesitate to call the proceeding an abuse of the sacred right of petition granted by the Constitution. The Emperor, says our contemporary, is to be petitioned only in extreme cases, when all ordinary means of redress have been tried in vain. "We cannot believe that this right to petition the Sovereign ought to be prostituted to the purpose of attacking political adversaries. These latter should be attacked openly and boldly through newspaper columns, by public speeches, and on the floor of the Diet." In order to show the importance of using discretion in exercising the privilege of petition, the *Nichi Nichi* quotes in full what Count Ito says on the subject in his Commentaries.

* * *

The *Yomiuri Shimbun*, generally friendly to the Radicals, is constrained to question the wisdom of the course just taken by them on this occasion. It "admires their enthusiasm" but cannot approve the idea of approaching the Emperor about the removal of His Majesty's Ministers. If the Ministers are unworthy of the nation's confidence, then the Diet should take cognizance of the fact.

* * *

The Sapporo Sugar Manufacturing Company has obtained uneviable notoriety on account of an issue of forged shares. The *Kokkai* is now publishing astounding "revelations" relating to the connections between the company and the officials of the Hokkaido Administration Board, particularly between Mr. Asaba, formerly an influential functionary of the above mentioned office and now director of the Sugar Company, and Mr. Ito, former Director of the company, the person accused of having issued the forged shares. According to the *Kokkai's* information, General Nagayama, former Chief of the Hokkaido Administration Board, is not free from the charge of negligence in his supervision of the affairs of the company. Mr. Asaba seems likely to come out of the trouble almost as badly as the former Director of the company; but, since everything will be made clear before long, we refrain from alluding to the accusation cast upon him. The *Kokkai* observes that its object in publishing the evil news, is simply to serve public interests. It makes the revelations with all the more readiness inasmuch as the company is no ordinary one, being under the special protection of the Government, which has the power of appointing the Director.

* * *

The *Hochi Shimbun* also writes on the same subject, and expresses profound regret that a company enjoying an extraordinary amount of Government patronage should have shown itself so unworthy of public confidence. On calmer consideration, however, our contemporary thinks that neither the company nor the officials concerned in its supervision can be held entirely accountable for the trouble. The whole atmosphere of the business world is in the Tokyo paper's opinion, permeated by the poisonous element of dependence on luck, an element originated and developed by the so-called "gentlemen merchants" of the present day, who owe everything they possess to the flattery and deceit that have enabled them to enrich themselves out of the people's taxes. Thus the whole tribe of these "gentlemen merchants" and their patrons in office are to be condemned, simultaneously and equally with the business men and officials concerned in the criminal proceedings of the Sapporo Sugar Manufacturing Company.

* * *

The *Mainichi Shimbun* thinks that the most efficient method of clearing Hokkaido of its present evils and corruption, is to establish a local assembly and let it exercise supervision over the doings of the official class in the island. Our contemporary hopes that the Diet will consider this question at its next session.

* * *

The *Choya Shimbun* is engaged in a crusade against what it calls the revival of the *jō-i* spirit. The opening article of the series on this subject has been already reproduced in our columns. In subsequent articles the Tokyo paper exposes the erroneous notions entertained by the conservatives in respect of the introduction of foreign civilization, foreign morality, and foreign religions. It also dwells at much length upon the evils of fostering national prejudices. There is no fear, says the *Choya*, that Japan will lose her national individuality on account of the introduction of foreign civilization and religions, for she is capable of assimilating them, just as she did the civilization and religion in troduced from the Asiatic continent in times long past.

* * *

The *Choya's* articles have called forth a vehement answer from the Conservative organ, the *Chiusei Nippo*. That paper strongly protests against the injustice of identifying fanatics like Nishino, Kurushima, and Tsuda with Conservative influence, and explains that the primary object of the reactionary movement is to check the indiscriminate imitation of Western institutions, Western customs, and Western manners. There is no lack of excellent arguments in defence of the Conservative movement, but the vehemence and even rancour with which the *Chiusei* rebuts the *Choya's* attack will by no means conduce to the interests of the cause it undertakes to champion.

* * *

The *Nippon* has also the *Choya's* articles in its mind when it asks, in a protesting manner, if there be such a thing as revival of the *jo-i* spirit. It ridicules the charge usually preferred against it, that its writings have the tendency of fostering the *jo-i* spirit. "The United States of America," it says, "have rigorous laws against the introduction of Chinese, while Russia is engaged in the expulsion of Jews. These actions manifest a kind of *jo-i* spirit. Far from recommending such steps, we have actually condemned them as irrational. If it is to be regarded as a manifestation of the *jo-i* spirit, to speak of foreign countries in a suspicious and contemptuous manner, then surely," says our contemporary, "foreigners themselves are actuated by a *jō-i* spirit against the Japanese, "for how often are our Imperial family, as well as our countrymen, reviled and abused by foreign newspapers.

* * *

The President and Councillors of the Imperial University and the Directors of the Higher Middle Schools are holding a series of conferences at the Department of Education. The subject of discussion is how to bridge over the gulf that now separates the Higher Middle Schools from the Ordinary Middle Schools. At present a graduate of an Ordinary Middle School must continue his studies for two or three years before he can pass the entrance examination of a Higher Middle School. The proposal reported to have the best prospect of obtaining the approval of the conference, consists in raising the standard of education in the Ordinary Middle Schools, and at the same time adding a few inferior classes to the Higher Middle Schools. Graduates of the former would then have the privilege of entering the latter without examination. These conferences engage the serious attention of private educationalists in the capital; for should the above proposition be adopted, the big private schools which prepare students for the Higher Middle Schools will suffer severely. The *Hochi Shimbun*, writing on this subject, observes that, so far as provincial localities are concerned, the proposition is suitable, but that it would be productive of injurious results in Tokyo. The immediate result of such a measure would be to discourage the development of private education. Schools like the Kinjo Gakko, the Tokyo English Language School, and the Kyoritsu Gakko, which contain from a thousand to two thousand students each, would be deserted and compelled to close their doors. Our contemporary, therefore, recommends that special arrangements be made in the case of Tokyo, so that these excellent private institutions may prosper side by side with the Government schools.

* * *

Tokyo papers publish a report from Korea that the Chinese are buying large tracts of land in the peninsular Kingdom and that other foreigners, including Japanese, are also following the example of the Celestials. The *Mainichi Shimbun* regards this as a serious thing for Korea. In her present condition, the possession of land by foreigners is fraught with serious dangers. Our contemporary thinks that, in order to maintain the independence of Korea and make her a part of Japan's defences against China and Russia, it is necessary to stop the purchase of land by foreigners. The Tokyo paper recommends the authorities to ascertain the truth of the report, and take prompt measures in case the story turns out to be well founded. But like too many irresponsible advisers, the *Mainichi* does not take the trouble to define these measures.

## *THE CASE OF TSUDA SANZO.*

WE publish elsewhere a translation of the opinion officially delivered by the eminent jurist M. BOISSONADE DE FONTARABIE in regard to the trial of TSUDA SANZO. There has been much talk about this affair. Several critics have contended that since, according to their rendering of the law, an attempt upon the life of a Russian Prince could not be brought within the purview of the special clauses of the Japanese Penal Code relating to attempts upon the lives of members of the Japanese Imperial Family; and since, unless these special clauses could be invoked, no reason existed for departing from the ordinary course of justice, therefore the action of the Supreme Court in assuming jurisdiction in first and last instance was illegal. Further, inasmuch as the abstract question of legality or illegality possesses little interest for the general public, these critics undertook to show that the ends of justice had been defeated, inasmuch as TSUDA SANZO was deprived of the privilege of appeal which he would have enjoyed had his case followed the ordinary channels of procedure. This latter contention, M. BOISSONADE declares to be based on a misconception of the spirit of the law. He points out that no guarantee whatever is furnished to an accused person by being cited before tribunals of inferior degree. The guarantee consists uniquely in having access to a Superior Court, and above all to the Supreme Court. To pretend, therefore, that by coming before the Supreme Court from the outset, TSUDA SANZO was deprived of the guarantees furnished by law, is as though one should assert that by setting a man at once in a life-boat during a storm, instead of placing him at first in a craft of a frailer order, his chances of safety would be diminished. TSUDA SANZO was arraigned before the highest, the most competent, and the most independent tribunal in the land, the very tribunal to which his final appeal would have been carried had there been cause to question the nature of the law administered by the inferior courts. This part of the discus- does not call for lengthy consideration. Justice was in no sense impaired by the process adopted, and for practical folks that fact is sufficient. But there remains the question, was the Supreme Court competent to assume jurisdiction in the first place; and having assumed jurisdiction, was it competent, in the second place, to pronounce sentence under the provisions of the Common Law? M. BOISSONADE answers both questions affirmatively. The jurisdiction of the Supreme Court is exercisable with respect to points of law only, with the exception of certain special crimes for the trial of which it is competent to assume the functions of a Court of both first and last instance. In TSUDA SANZO'S case a point of law was raised at once. The Chief Public Procurator argued that the crime belonged to the Code's special category of attempts against the life of an Imperial personage, and the District Court at Otsu, after hearing the pleadings, declared itself incompetent to decide this point of law. A decision could, in truth, have been of little value, for the Public Procurator, in the one event, and the prisoner's counsel in the other, would inevitably have appealed against the inferior tribunal's ruling, and thus the question must have come finally to the Supreme Court. Ignoring this latter consideration, however, we have the plain fact that the Otsu tribunal having declined to decide the point of law, the duty of doing so devolved, *de facto*, on the Supreme Court. In writing about the affair, some journalists appear to labour under the hallucination that the Supreme Court, without hearing any arguments or holding any regular session, might have over-ruled the inferior tribunal's declaration of incompetence, and directed it to try TSUDA under the provisions of the Common Law. The error of such a supposition is plain. A case coming before the Supreme Court has to be duly heard. Under ordinary circumstances the hearing takes place at the Court's regular session in Tokyo, but in this instance the point of law to be adjudicated had reference to the category of exceptional crimes enumerated in the First Chapter of the Second Book of the Penal Code. It consequently became competent for the Court to open a special session in the District tribunal at Otsu, as provided in the Law of Organization, and it adopted that course as the most simple and expeditious. Thus the procedure followed up to the moment of opening the Supreme Court's session at Otsu is perfectly clear and regular, and the only question remaining to be considered is whether the Court, after hearing the pleading of the Chief Public Procurator, and deciding that the crime must be regarded as a common assault, ought not to have remitted the case to the inferior tribunal within whose venue it had originally lain. M. BOISSONADE, in discussing this phase, asserts that, had the Court of Appeal, for instance, adjudging TSUDA'S crime to belong to the special category of attempts against Imperial personages, pronounced a capital sentence, the Supreme Court, in reversing that judgment, would have altered the sentence into one of penal servitude. In short, according to M. BOISSONADE'S contention the superior tribunal, having once assumed jurisdiction, exercises it to the end, even though the exercise does not extend to any sentence lying beyond the range of an inferior court's competence. We cannot pretend to be ourselves entirely convinced by this line of reasoning, though we fully admit the weight of M. BOISSONADE'S authority. In England the practice with regard to criminal cases is to be guided by the strict letter of the law, and according to the strict letter of the law, as we read it in Japan, the general jurisdiction belonging to an inferior tribunal cannot be assumed by the Supreme Court except in regard to certain special and clearly defined crimes. It will seem to Englishmen that, having been called upon to determine the point of law whether TSUDA SANZO'S offence belonged to the special category of crimes judiciable in first and last instance by the Supreme Court and having decided in the negative, the Judges of that Court should have stood aside and suffered justice to follow its ordinary channels. The extraordinary course adopted was warrantable only under extraordinary circumstances, which the Court itself declared to be non-existent in TSUDA'S case. That justice suffered, or could have suffered, by the method pursued, is evidently out of the question. Some persons may indeed claim that the greater the number of tribunals accessible to a prisoner, the greater his chances of escape; but with such a pretext we cannot sympathise. Substantial justice was doubtless secured, and in point of celerity the advantage was plainly on the side of the method pursued. When we come, however, to discuss the actual legality of the procedure, we find it impossible to reconcile it with English notions. The precedent established by this action of the Supreme Court is that when a superior tribunal is called upon to determine whether the nature of a case is such as to warrant its exception from the general jurisdiction of inferior courts, then the superior tribunal becomes *de facto* competent to deal with the case in first and last instance, even though it should already have decided, as a point of law, that the alleged crime does not constitute one of the exceptional offences over which it possesses such special jurisdiction. Surely that is not logic, though M. BOISSONADE'S dictum compels us to admit that it is law in Japan.

## *BRITISH OFFICERS IN THE CHINESE NAVY.*

A LONG correspondence, for the most part semi-official, between certain British and Chinese authorities, has just terminated in a rupture. It has reference to the employment by the Chinese of English naval officers, and arose out of the well-known incident connected with the resignation of Admiral LANG last year. We need not recapitulate the circumstances under which that distinguished officer felt himself bound, in defence of his own dignity and that of the British naval service, to quit Chinese employment. The course which he took from the moment his flag was hauled down by a Chinese officer in Hongkong Harbour, to the moment when he shook the dust of the Chinese service off his feet, received the full approval of the British Admiralty, which did not hesitate to say that his con-

Digitized by Google

duct throughout had been characterised by prudence and propriety. Following on this event in due time came a semi-official demand for explanations. One can easily understand that the British Naval Authorities strongly resented this treatment of a distinguished naval officer, whose services were lent as a matter of compliment to the Chinese. His treatment was not only an indignity to himself, but to the British Admiralty, and the latter so regarded it and took measures accordingly. On the other hand, it is more puzzling for us to put ourselves in the position of the Viceroy Li. What the forces may be which guided his course in the matter, are very difficulty for outsiders to understand and appreciate; but it is perfectly certain that the explanation she gave were not satisfactory, and that his excuses were not accepted. The correspondence was conducted mainly in London between the Chinese Legation on one side and the British Foreign Office and the Admiralty on the other. The Legation was naturally all apologies and explanations, for the Chinese Minister in London at least can be under no delusion as to the consequences of Admiral LANG'S resignation. The Admiralty was implacable, and the Foreign Office acted as peace-maker. But on the matter of the dignity of the naval service the Admiralty refused to be guided by the Foreign Office. As soon as the circumstances under which the resignation of Admiral LANG took place became known at home, the Admiralty at once resolved that no British officer should for the present be allowed to enter the Chinese Service, and a little later those officers who were in that service received notice that at the expiration of their present terms of employment they would be required to rejoin the Navy and would not be permitted to renew their engagements with the Chinese Government. All attempts hitherto to procure the withdrawal of this order have been vain, and the general opinion among those acquainted with the facts is strongly in favour of the Admiralty. Whether the pay of a particular officer or officers is increased by entering the Chinese Service, is of course a matter of absolute indifference to the British Authorities; it may be, and usually is, of the greatest importance to the officer himself; but to the British Navy it is of no moment whatever. The Admiralty Authorities say that at great inconvenience to the Navy, and at considerable pecuniary loss to the public service, British officers are permitted to enter the Chinese Naval Service. As a rule they are picked men, who would not be likely to languish at home for want of employment. In most cases they are permitted by the Admiralty to pass from the active to the retired list for the purpose of coming to the East. During the term of their Chinese employment they are to all intents and purposes lost to the British service, yet throughout the whole time their service in China counts towards promotion and pension, just as if they were on board British vessels, or as if they were ready in Plymouth or Portsmouth at a moment's notice to take up new appointments. The Admiralty, therefore, loses much and strains several points in order to oblige the Chinese Government by placing at its disposal the services of British officers trained at British expense, and for the terms of their engagement lost to the British service. The Chinese Authorities appear to be under the impression that because they pay salaries which the officers are willing to accept, there the obligation ceases; they do not observe or will not admit that it is owing to the indulgence and friendliness of the British Admiralty that they are able to have British officers at all. Indeed, the views of the Chinese Government on the matter are of that squint-eyed and superficial nature which is somewhat characteristic of them. As the matter stands at present a British officer cannot enter the Chinese Navy until he has severed for ever his connection with his own service. No British subject of intelligence needs to be told how seriously this will militate against the Chinese getting efficient English naval officers, and the Chinese have only themselves to blame for the result.

The case of Mr. HEARSON, which was settled in February last by the courts in London, is instructive in more ways than one, and illustrates what we have stated above. On March 28th, 1890, he, being an engineer in the British Navy, was appointed to the *Pembroke* as an "additional" for the *Mersey*, and on July 22nd he was appointed to the latter ship for service during the autumn manœuvres in August. While here he was offered the post of instructor in the Naval College of Nangkin, on similar terms to those already accepted with the consent of the Admiralty by his brother. On September 4th the *Mersey* was paid off, and he reported himself to the Captain of the *Pembroke* in accordance with the Admiralty Instructions. He immediately asked leave to go on half-pay for three years in order to accept this appointment, but was informed by the Admiralty that this request would not be granted. Meantime, his name was not entered in the books of the *Pembroke*, and if it remained on the books it was merely because there had been an omission to remove it when he was appointed to the *Mersey* in the previous July. On receiving the notification of the refusal of the Admiralty to grant him leave on half-pay, he wrote tendering the resignation of his commission, and, as such applications usually are accepted forthwith, he appears to have been under the impression that it was merely a formal matter involving a few days' delay. He stated subsequently in an affidavit that he believed were it not for the difficulty which had arisen between the Admiralty and the Chinese Government the former would willingly have concurred in his appointment. On October 10th he received leave of absence for a week, and on the 15th, having received no notification of the refusal to permit his resignation, he accepted the post tendered to him, got another week's leave and started for China under the impression that there would be no difficulty about his resignation, and that even if there was he had a legal right to resign. On his arrival at Singapore, as is well known, he was arrested and taken back to England. Now, in this state of the facts the whole question was whether Mr. HEARSON, under the circumstances, came under the Naval Discipline Act. If so, he was liable to be charged with desertion; if not, he was entitled to be set free, and this question in fact, owing to the language of the Act, resolved itself into the further question "was he borne on the books of one of HER MAJESTY'S ships in commission?" If so he could not resign without the consent of the Admiralty, and was a deserter from that ship. This question was really of very little importance to anyone but to Mr. HEARSON himself, because it was admitted to be a high and dry technicality arising under a peculiar state of circumstances which could scarcely exist in case of any other officer; for he was first on board the *Pembroke*, but appointed to the *Mersey* for the Autumn manœuvres; then he was discharged from this ship, and whether what took place on his discharge amounted to putting him on the books of the *Pembroke* or not was the point to be decided. The Court found that the result of this curious shuffling, these transfers and re-transfers, was that in the end he was not on the books of any ship, and that therefore he was not under the Naval Discipline Act, and was not liable to the charge of desertion. In this aspect therefore, as we have said, the case is really of no importance to anybody, but incidentally a very important question respecting naval officers came under discussion. This was whether a commissioned officer in the Navy on the books of one of HER MAJESTY'S ships—that is, in other words, on active service—can resign his commission and leave his ship without the consent of the Admiralty. This is a matter of immense importance to naval officers, and to the naval service generally, and although discussed in Mr. HEARSON'S case, the Court held itself bound by a previous decision on the matter by another court of co-ordinate jurisdiction. It is still open for discussion in the Court of Appeal and in the House of Lords, but so far as a court composed of four judges can settle the matter it is completely settled by a decision in the case of Lieutenant HALL in 1887. Lieutenant HALL, in 1886, applied for an appointment in the London Salvage Corps, and was successful, he being at that time on board the *Orontes* at Sea. In October he wrote to

Digitized by Google

the Admiralty resigning his commission, but the resignation was refused. In February, 1887, the *Orontes* being then in Simon's Bay, in South Africa, he obtained leave from the captain to go to Cape Town till the following afternoon, and from that place took passage home in a mail steamer, writing to his captain and returning his commission. On the arrival of the mail steamer at Plymouth, Lieutenant HALL was arrested and the matter came before the High Court of Justice on an application for a writ of HABEAS CORPUS It was contended for the Admiralty that an officer's commission bound him to serve in the Navy so long as he is fit to perform his duty, and so long as the State required his services. For Lieutenant HALL it was argued that the commission might be resigned at any time, and that the QUEEN had no right in time of peace to insist on the performance of duties from which the officer desired to escape. The Court refused to agree with either argument. The judges were of opinion, however, that where a commissioned officer accepts an appointment to serve in one of HER MAJESTY'S ships in commission and enters upon the performance of his duties, he subjects himself to the provisions of the Naval Discipline Act, and at his own will and pleasure cannot resign his appointment, and may be tried by Court Martial for any of the offences specified in the statute. Any other interpretation would leave the QUEEN'S ships in commission open to the peril of being without officers at their own will and pleasure; but whether the officer who, not being on the books of any ship, declines to undertake a particular service can be court-martialled for his refusal, is a point which the Court declined formally to decide, although some of the judges expresed the opinion that he was not liable to punishment. The position of naval officers is, however, sufficiently clear. If they accept an appointment which puts them on the books of a ship of the Royal Navy, they cannot resign that position at their own will and pleasure; but it appears that when they are not on the books of a ship they may refuse to accept the employment which would place them there, and then they can resign the naval service. This seems to give officers abundant liberty, while at the same time properly protecting the public interests. China will therefore be still able, in spite of the Admiralty, to get officers of the British Navy, but they must be officers who find it to their interest to resign the latter before entering the Chinese service. Whether this is a state of things entirely satisfactory either to the Chinese or to the officers concerned, is a matter which they must be left to decide for themselves.

## *THE JEWS.*

IT is becoming a mystery of much interest to divine the name of the country where Baron HIRSCH contemplates founding the new Kingdom of the Jews. The Baron is a man of enormous wealth, which he has no means of spending satisfactorily. His only son is dead, and he is too old to be ambitious after the usual manner of men. On the other hand, the vista of his past life is not free from defects, which he may well desire to obliterate before he dies. Not always remarkable for the scrupulous character of his transactions, and finding himself lonely and unconsidered despite his vast wealth, the Baron perhaps sees in the misfortunes of his fellow-countrymen a providential opportunity to re-build his reputation and utilize his gold. He has put up three millions sterling of his fortune —how many millions are left, we wonder— wherewith to purchase a great tract of land in some unoccupied region for colonization by Jews expelled from Russia, Poland, and other countries. It is a splendid beginning, and people talk of the ROTHSCHILDS contributing at least an equal sum, so that, with subscriptions by other wealthy Israelites, a capital fund of ten millions sterling will be at once obtained. But the projectors observe strict silence as to the site of the new colony. At first there was talk of Palestine, but this idea has been discredited, and conjecture is for the moment entirely at fault. To us the weak point of the scheme is that it assumes the willingness of the Jews to settle down in an out-of-the-way region. Agriculture has not usually possessed attractions for them, and their history seems to indicate tendencies not adapted for purposes of colonization. However, Baron HIRSCH and his advisers must be assumed to understand their own people.

The story of the Jewish race is a terrible record. Their expulsion from England in the thirteenth century, after cruel spoliation and persecutions, was followed in the fourteenth century by the series of awful episodes in central France, when every Jew in whole provinces was burned, and at Chinon 160 of both sexes perished in the same furnace. In Germany, before the Crusades, a raid against the Jews was a favourite pastime of bankrupt nobles, and during and after the Crusades one had only to raise the cry "Hep" in any city of the empire to provoke a paroxysm of murderous rage against the Jews. Massacred and burned by thousands, they nevertheless made themselves so indispensable that their complete expulsion could not be effected. In Spain, after a period of tolerant, nay even humane, treatment, they were subjected to terrible persecutions by the Gothic princes in the 6th and 7th centuries, the result being that they sided with the Moorish invaders, and enjoyed under the latter a long interval of peace and prosperity. But this calm was succeeded by a fierce storm. "The estates of the nobles," says history, "were in many cases mortgaged to the Jews; hence it was not difficult for 'conscience' to get up a persecution. Gradually the Jews were deprived of the privilege of living where they pleased; their rights were diminished and their taxes augmented. * * * Immense numbers were murdered, and wholesale theft was perpetrated by the religious rabble. Escape was possible only by flight to Africa, or by accepting baptism at the point of the sword. The number of these enforced converts to Christianity is reckoned at 200,000. The fate of the Jews in Spain during the 15th century, however, beggars description. We read of nothing but persecution, violent conversion, massacre, the tortures of the inquisition. Thousands were burned alive; and in one year 250 were burned in Seville alone. Sometimes the popes, and even the nobles, shuddered at the fiendish zeal of the inquisition, and tried to mitigate it, but in vain. At length the hour of final horror came. In 1492 FERDINAND and ISABELLE issued an edict for the expulsion within four months of all who refused to become Christians, with the strict prohibition to take neither gold nor silver out of the country." Thus, after seven centuries of residence, the Jews, to the number of 300,000, were driven out of Spain. Some of them ventured into France, where their countrymen had already suffered so much. Others made their way to Italy, Turkey, and Morocco. About 80,000 obtained entrance into Portugal by paying eight gold pennies per head for a respite of as many months. Lingering after this stipulated period, they experienced appalling cruelties. EMMANUEL, in 1495, ordered their expulsion, but at the same time gave directions that all Jewish children under 14 years of age should be torn from their mothers, detained in Portugal and brought up as Christians. It is related that numbers of Jewish mothers, losing their reason in these terrible circumstances, destroyed their children with their own hands, and threw them into wells and rivers to prevent them from falling into the power of their persecutors. Thenceforth they found some clemency in Italy and Turkey, but in Germany they continued to suffer as before, being driven out of Bavaria and Brandenburg in the second half of the sixteenth century, and exposed, during the seventeenth and first part of the eighteenth century, to hardships of the most cruel character. Even in England, although from the time of CHARLES II. the Jews were allowed to return and live unmolested, it was not until the reign of QUEEN VICTORIA that their disabilities were finally removed, one by one, so that they now enjoy, with insignificant exceptions, precisely the same privileges as free-born British subjects. Yet, strange to say, out of 6¾ millions of their race in Europe, only 100,000 are to be found in

Digitized by Google

Great Britain. The distribution of the Jews throughout the world, according to the latest estimate, is as follows :—

| | |
|---|---|
| Russia | 3,500,000 |
| Austro-Hungary | 1,800,000 |
| Germany | 600,000 |
| Roumania | 350,000 |
| Turkey in Europe | 160,000 |
| Holland | 90,000 |
| Belgium | 6,000 |
| France | 75,000 |
| Great Britain | 100,000 |
| Italy | 40,000 |
| Switzerland | 8,000 |
| Scandanavia | 8,000 |
| Iberian Peninsula | 2,000 |
| Asia | 500,000 |
| Africa | 350,000 |
| America | 500,000 |
| Australasia | 20,000 |

It will thus be seen that the action of the Russian Government is of immense significance to the Jewish race, since it involves nearly one half of their total number in a fate that recalls mediæval times. Their treatment during the whole of the Christian era is a foul disgrace to Europe.

## *POLITICAL PARTIES.*

AFTER the defeat of the Radical and Progressionist combination in the House of Representatives last session, the latter party found that it had made a distinct advance in popular favour owing to its determined and unflinching attitude in the Diet, whereas the Radicals, a secession from whose ranks had snatched victory from the very lips of the union, and who had proved themselves by no means such stalwart opponents of the Government as the Progressionists, forfeited a certain amount of prestige. On the closing of the Diet both parties went busily to work, the one to repair its losses, the other to profit by its advantage, while their opponents, the Government party, flushed with victory, formed the *Kyodo* (Union) Club and set about stumping the provinces. So far as the Radicals are concerned, however, it appears to be out of their power to attain a condition of real consolidation. Divisions and dissensions mark their career, and it is extremely difficult to say, at present, how many actually follow Count ITAGAKI'S banner and how many occupy a different camp. The *Choya Shimbun* gives the following estimate of the present division of the various parties in the House :—

| | |
|---|---|
| *Jiyu-to* (Radicals) | 80 |
| *Jiyu* Club (A seceding section of the Radicals) | 33 |
| *Kaishin-to* (Progressionists) | 42 |
| *Kyodo* Club (Unionists) | 75 |
| *Taiseikai* (Independents) | 35 |
| Not attached to any Party | 33 |
| *Kokumin Jiyu-to* (National Radicals) | 2 |

The latest rumour is that an amalgamation of the Radicals and Progressionists has been virtually accomplished, so far as the leaders of the two parties are concerned, but that Messrs. HOSHI TORU and OI KENTARO, among the Radicals, have declined to fall in with the project, and declared their intention of seceding. They would take with them about forty members, so that the result of the combination would be a compact body of some eighty odd members under the leadership of Counts OKUMA and ITAGAKI. It is alleged that Count OKUMA has asked Count ITAGAKI to be the chief of the united party. A union of this kind is what we have always hoped for and predicted. The *Jiyu-to*, as hitherto constituted, contains elements with which the sober, moderate politicians on the *Kaishin* side could not possibly amalgamate permanently, and which are not calculated to impart credit or solidity to any political movement. If the act of combining with the *Kaishin-to* has the effect of extruding these elements from the ranks of the *Jiyu-to*, that in itself would be gain, apart from the fact that the united parties would represent a really sound and responsible association. The action attributed to Count OKUMA is just what we should have expected from a man of his political insight. He understands perfectly well that the *Kaishin-to* can afford to be magnanimous, and that being comparatively free from jealousy, such sacrifices will cost them little. No happier event could occur in the field of Japanese politics than union of this nature. It would at last give to the country a political party worthy of the name. We should then have in the Lower House two great parties, namely, the *Kyodo* Club which, with additions from the *Taiseikai* would probably command about a hundred votes in any division, and the combined *Kaishin* and *Jiyu* parties commanding from eighty to ninety votes. Little by little the remaining members could not fail to range themselves on the side of one or other of these coalitions, although it must be confessed that among this unclassed residuum there are not a few men whose cöoperation would embarrass rather than strengthen the party of their choice. It will, of course, be understood that the proposed amalgamation of the *Kaishin-to* and the *Jiyu-to* is not absolutely certain. But events have long pointed to it with increasing clearness. It would have to be preceded by the dissolution of one of the two parties, probably of both. For the law forbids their combination until they have ceased to be registered independently, and it is not easy to suppose that the *Kaishin-to* would carry self-abnegation so far as to dissolve for the purpose of being absorbed into the ranks of the *Jiyu-to*. Besides, the name of the coalition could not well be either *Jiyu* or *Kaishin*. Thus the simplest course would be the dissolution of both, and the formation of a new party out of their elements. Possibly an agreement has already been come to in respect of this, but nothing is yet known publicly. Should the re-organization be effected as foretold, the next point of interest will be the ultimate affinities of what may be called the "drift;" namely, the 33 members who seceded from Count ITAGAKI on the occasion of the complications about the Budget, and who now form the *Jiyu* Club ; the 40 members who, under the leadership of Messrs. HOSHI and OI, are expected to secede in consequence of the amalgamation of the *Kaishin-to* and the *Jiyu-to*; and the non-attached members. These factions cannot exist independently, and the side to which the majority of them gravitate will obtain the ascendancy. The members of the *Jiyu* Club, though separated for the moment from Count ITAGAKI, are so much attached to him personally that their return to his leadership can only be a question of time. But with regard to the other sections, it is difficult to predict anything.

## *HARVARD COLLEGE EXAMINATIONS IN JAPAN.*

WE learn from the *Jiji Shimpo* that examinations for admission to Harvard College (Cambridge, Mass.) are soon to be held for the first time in Japan. The matter has been under consideration for some time, the chief motive being the number of Japanese students now studying in that institution, and the risk and uncertainty to which they are subject in crossing to America with the hope of passing the examinations. For some years examinations have been held in all the chief cities of the United States and, when necessary, in London, Paris, and Berlin. The roster of students already includes many from such distant points as Germany, South Africa, and the Sandwich Islands.

Several scholarships have recently been established for the sole benefit of Japanese students, and this will doubtless make it possible for many to study in Cambridge who have hitherto been deterred by the expensiveness of study abroad as compared with study in Japan.

One of the difficulties in carrying out such a project as this is the necessity of making an allowance for the different training of Japanese youths, and of establishing a principle by which to secure in Japanese students a mental maturity equal in degree to that usually required though differing in previous training. The requirements for admission to Harvard have been hitherto substantially the same for all candidates (not coming from other colleges), but the system is sufficiently flexible to suit the varying tastes and aptitudes of students. It is clear, however, that something must be stretched for the sake of Japanese students. Latin and Greek, for example, one can hardly expect of them. At the other extreme—natural science—we cannot look for a training in laboratary work such as is required of those who do not offer the Western classics. Mr. IKEDA, who entered last year, was allowed to substitute Japanese and Chinese Literature for Latin and Greek, and the same privilege will probably be given to other Japanese candidates.

The authorities of the Educational Department and of the various private schools have cöoperated in the preparations necessary for the undertaking, and the Educa-

Digitized by Google

tional Department has generously placed a room at the disposal of Harvard College for this purpose. The examinations are everywhere held on the same days and hours, and, as has been said, the same papers are set for all. The Tokyo examinations will take place in a room of the First Higher Middle School at Hongo, on June 23rd, 25th, 26th, and 27th. A schedule is given below. Those who take the subjects of the first day are required to give previous notice. No one can be finally admitted without testimonials of character.

SCHEDULE OF EXAMINATIONS.

TUESDAY, JUNE 23RD.—Beginning at 8.30 a.m.—Advanced Chemistry, Advanced Physics, Advanced Algebra.

THURSDAY, JUNE 25TH.—Beginning at 8 a.m.—Elementary Latin (or Japanese Composition), Elementary Greek (or Chinese Literature), Analytical Geometry, Latin Composition, Advanced Latin.

FRIDAY, JUNE 26TH.—Beginning at 8 a.m.—Elementary Physics, Plane Geometry, Algebra, History, English, Greek Composition, Advanced Greek.

SATURDAY, JUNE 27TH.—Beginning at 8 a.m.—Advanced French, Logarithms and Trigonometry, Solid Geometry, Elementary French, Elementary German, Advanced German.

It may be explained that the above subjects are not all necessary for admission. The system is as follows:—The required subjects of knowledge are classed in eight groups, viz., Latin, Greek, English, French, German, History, Mathematics, and Physical Science. Each of these (except English and History) is again divided into "elementary" and "advanced." Two large groups are thus formed, one of "elementary" studies, eight in number, the other of "advanced" studies, nine in number. In Mathematics, for example, Plane Geometry and Quadratic Equations mark the limits of the "elementary," and Trigonometry, Analytic Geometry, Theory of Permutations, &c. are reckoned as "advanced." Each candidate is required to pass in *all* of the elementary studies and at least two of the advanced. But he may omit one or two of the languages (except English) in the elementary group, provided he supplies the place with an additional one or more of the advanced studies. In this way an effort is made to allow for varying aptitudes while securing equivalent mental attainments. Thus, out of the twenty-one subjects of the schedule, no more than ten would ordinarily be taken by a candidate.

As a specimen of the preparation demanded, requirements in English may here be mentioned. The candidate is to write "a short English composition, correct in spelling, punctuation, grammar, division by paragraphs, and expression, upon one of several subjects announced at the time of examination. In 1891 the subjects will be drawn from one or more of the following works: SHAKSPEARE'S "Julius Cæsar" and "Merchant of Venice," COLERIDGE'S "Ancient Mariner," LONGFELLOW'S "Evangeline," MACAULAY'S "Lord Clive," WEBSTER'S first Bunker Hill oration, IRVING'S "Alhambra," SCOTT'S "Old Mortality," GEORGE ELIOT'S "Silas Marner," HAWTHORNE'S "House of the Seven Gables." This list is always announced four years beforehand, and is the one adopted generally by New England colleges for the purpose. Several of the works named are probably seldom read by the Japanese student, and some equivalent will doubtless be allowed.

As regards the number of candidates for admission, it is impossible to know beforehand. The standard of the examinations and the expense of a course at Harvard (compared to Michigan University, for example) are likely to keep the numbers down. But Harvard has never shown herself willing to attract a larger membership by lowering the standard of attainments required. The examinations are intended merely to obviate certain inconveniences for those (whether few or many) who are able and desirous to enter. The scholarships now available will of course do something to open the way to many who could not have aspired to a training in foreign universities. It is an axiom with the Japanese student that the world owes him an education, aud were the scholarships alone to be considered, there would be no lack of candidates willing to own Howard as their *go-zen*. But the ordeal of the examinations stands in the way, and we do not know how many will be found equal to it.

## *REGULATIONS FOR EXAMINATION OF COURT CLERKS.*

Regulations for the examination, prior to appointment, of Court Clerks have been decided as follow.

Count YAMADA AKIYOSHI,
Minister of State for Justice.

Dated May 15th, 1891.

NOTIFICATION No. 4.

CHAPTER I.—EXAMINATIONS.

Article. 1.—Examinations for the appointment of Court Clerks shall be in accordance with the present regulations, except so far as provided for by Imperial Ordinances relating to the examination of Civil Officials.

Article 2.—The examinations shall be conducted in Appeal Courts.

Article 3.—The Examination Committee shall be appointed by the Minister of State for Justice from among judges and Public Procurators, and chief clerks of Appeal Courts, or judges and public procurators of district courts within the jurisdiction of each appeal court.

The Chairman of Committee shall be that member of Committee who holds the highest rank.

Article 4.—Each examination shall have as subjects one or other of the Civil, Commercial and Criminal Codes, and the Codes of Criminal and Civil Procedure, besides composition, copying, dictation, arithmetic and book-keeping.

Article 5.—The Chairman of Committee may, where a candidate so requires, permit attendance at a written examination in a district court. In this case the replies to the questions of the examination shall be given under the superintendence of the officials of the court.

Article 6.—If the Examination Committee consider a candidate qualified to attend the oral examination, after examining his replies to the written examination, they shall subject him to such oral examination.

Article 7.—Where a candidate has not attended an oral examination, his examination shall be held void.

Article 8.—A certificate shall be given to such as have passed examination, bearing the signatures of the Chairman and members of the Examination Committee.

Article 9.—The Chairman of the Examination Committee shall report the names of those who have passed, and the result of the examination to the Minister of State for Justice.

CHAPTER 2.—PRACTICAL TRAINING.

Article 10.—Candidates who have passed examination may be appointed probationary clerks of courts.

Probationary court clerks shall undergo practical training in local and district courts as well as in public procurators' offices.

Article 11.—The nature of the practical training to be undergone shall be decided by a conference of the President of Appeal Court and the Chief Public Procurator.

Article 12.—Control and superintendence of the practical training of a candidate shall be vested in the president of the District Court or the head public procurator, or the presiding judge, or a judge of the local court or the public procurator of the latter court. Such superintending official shall name an official who shall take direct charge of the practical training.

Article 13.—Should a probationary court clerk neglect his official duty or conduct himself improperly either inside or outside his office, he shall be warned by the official in charge of his training.

Article 14.—Should the official or non-official conduct of any probationary court clerk be deemed improper, or his progress in practical training be imperfect, his superintendent shall report the fact to the President of the Appeal Court and to the Chief Public Procurator.

Article 15.—The superintendent shall, when a probationary court clerk has finished his practical training under his charge, prepare a certificate relating to such training, wherein he shall state the result of the training and conduct of the candidate both inside and outside his office, and transmit the same to the President of the Court of Appeal and the Chief Public Procurator.

Should any warning have been given as to the conduct of the candidate, such fact shall be stated on the certificate.

The President of the Appeal Court and the Chief Public Procurator shall add their opinion to the certificate, and transmit the same to the Minister of State for Justice.

Article 16.—The regulations of this chapter shall be applied to the practical training of those who become court clerks without being required to pass the examinations.

## *CORRESPONDENCE.*

### PROFFESSOR HOWARD AND "SECULARIAN."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the judgment of many, if not all of your readers, except "Secularian," the lecture recently printed in your columns by Prof. Howard is a model of truth and facts combined, and all that was claimed for it by it author. It did not solicit a quarrel, but it seems that "the great watch" who is set for looking after the faith of others, did not let it pass—and as in numerous cases "flung his ink" at the paper, and *tried* to say something about it. "Secularian," I suppose, is a so-called "infidel," who believes nothing but what he sees, and don't like to have anybody else believe in anything, but "beans and potatoes." He accused Mr. Howard of *taking for granted* that Josephus and other writers, and the Bible were genuine, and says all of these are "questioned."—"That is argument in a hurry," to say that *every* history is "questioned," except some remote author who happen to be silent on the question. That is about the way such writers get out of a thing that is true: just say, "it is questioned." They question everything but Tom Paine, but in his works they lurk, and "spout out" against God and man. I do not know Mr. Howard, nor "Secularian," but suppose that an ordinary fair test of the sincerety and genuineness of their faiths could be evinced by the lives of their followers. Is the doctrine of Christ so offensive? And why? Has it not literally *made* its millions of true men, and nations beside? What has "Secularian's" scepticism accomplished? And what does he now seek to accomplish? Is it to do good, or to "air himself." It cannot do good, and it seems to be worthless to spend so much "wind," "airing" truths that have stood for ages and flourished amid worse storms than "Secularian" can raise. He says "Christian apologetics is steadily deteriorating." Talk about facts! A boy twelve years old, that has ever read the first book of history, and a monthly magazine knows better than that! Tom Paine talked like that, and said only another half century would witness the overthrow of Christianity. Let "Secularian" compare statistics and see how wonderfully Christianity has thriven on that! Tom Paine's printing house is now used for printing Bibles. But I am not writing a review of the articles in question, but simply took up my pen to express my appreciation of

Digitized by Google

Prof. Howard's lecture. I heard an old reader of the *Mail* say to-day that "Prof. Howard's lecture is the best thing I ever saw in the *Mail*—and he likes your paper too. He has spent thirty years in the East and his criticism has weight. Your Kobe readers have appreciated the rare treat in "The Christ: Judged from a Scientific Standpoint." I hope Prof. Howard will "be drawn out" and thereby give your readers some more of his able writing.

A. AMOR VERITAS.

Kobe, June 10th, 1891.

## THE STAGE AND WE: OR, JOHNEY'S REFLECTIONS WHILE READING MR. MILN'S LECTURE.

To the Editor of the "Japan Mail."

Sir,—I have read Mr. Miln's Lecture—"The Church and the Stage." At first his twin sisters reminded me of two old negroes, Aley and Rachel, sisters, whom I knew in C. The elder, being poor and in ill-health, was obliged to apply to a warden of the poor for assistance. She supposed that funds for her immediate relief were in the officer's hands, and that it was only necessary for her to state her case; but found when she made her application that certain formalities had to be observed. Not receiving any money the very day she made application, and not appreciating the formalities of the law by which she was required to wait, she came away somewhat discouraged, and on the way home met a friend to whom she gave an account of her troubles and sufferings. While Aley was making her speech, Rachel, who had accompanied her, stood by, and exclaimed with every breath, in subdued and solemn tones, "Poar Aley! Poar Aley! Poar Aley!" I thought, "Poar Kingsley! Poar Church! Poar Preachers! Poar England to have produced such preachers!

I read farther, and it appeared that a long while ago the little sister got stuck in the mud, and the big sister ran off and left the little sister "stuck in thar." And I said, "Poar Theatre! Poar Theatre! Poar Theatre!" I dried my eyes and read some more, and it appeared that that Big Sis was all wrong, but that she has discovered her mistake and has already set about a reconciliation with a will (and a whole set of pulpit chairs)! "Gracious," thought I, "but ain't thar a good time a comin!"

Just as I imagined I could almost see Little Sis "a clappin' of her hands and a-shoutin' (orthodox now)" this troublesome old memory of mine recalled the following article in one of the last home papers, under the heading:

MISS MARY ANDERSON RETIRES FROM THE STAGE.

"Miss Mary Anderson, who is a Louisville lady, has ever been regarded as one of the few pure women on the stage. She has been used as an argument against the preachers and others who condemn the theatre as evil in its influence and tendencies. It has been said, "If the theatre were so bad, would such a woman as Mary Anderson remain on the stage?" Of course the theatre as an institution might be very bad indeed, and yet there might be a few persons on the stage who were not corrupt. But now Miss Mary Anderson has permanently retired from the stage because she is convinced it is evil, and she declares that she will never attend a theatre again.

"This is no instance of disappointed ambition, for Miss Anderson had attained the highest distinction of any woman who has acted in the theatre of this generation. Sometimes people find out a thing is wrong when they try to do it and fail. Not so in this case.

"Neither is it a case of decayed popularity. After men have worn themselves out, even though they have attained success along certain lines, they sometimes have conscientious scruples which never bothered them during their times of success. But Miss Anderson's popularity has suffered no diminution. Indeed, the declaration of her conviction that the theatre was wrong was called forth by an attempt on the part of a manager to engage her for $5,000 a week.

"Here then is a pure woman who thought she could have an honourable career on the stage, maintaining her uprightness and avoiding all wrong. She was influenced by no Puritanical ideas. She regarded the stage as a proper and an honourable profession, and she achieved the highest success in it, yet she finds after a thorough trial that it is all wrong, and she declares she will never act again, now will she countenance acting by her presence. If this does not convince those church members who have been inclined to apologise for the theatre, we do not know what sort of evidence would convince them.—*Western Recorder.*"

Nothing would be to the church and the faithful ministry of to-day a greater source of rejoicing than such a transformation of society as would render this great "social force," the theatre, a power for the uplifting of the people into broader and more real conceptions of the human and the divine. But before we can assume that such a degree of perfection has already been attained Miss Anderson's testimony must be set aside.

It is natural for Mr. Miln to be in love with his profession, and every one should wish him God-speed in his efforts to elevate its moral standards and to maintain its dignity. But before we can conclude that the fame and the admiration justly accorded Mr. Miln for his mastery of the great characters of the greatest English mind, by lovers of the beautiful and the sublime in nature and in art, mean approval of the modern stage, not only will Miss Anderson's testimony have to be ruled out of court, but also that of a number of preachers not yet heard from. Thus endeth Johney's reflection.

Very respectfully, JOHNEY.

Yokohama, June 13th, 1891.

## THE EX-MINISTER OF FOREIGN AFFAIRS.

To the Editor of the "Japan Mail."

Sir,—One of the most remarkable examples of comparative neglect or oversight, is the Government's relinquishment of the public services of Viscount Aoki. That gentleman seems to have especially deserved esteem and honorary recognition for his efforts in elevating the country's foreign relations, which would soon have further developed into the much desired consummation of Treaty Revision. That a statesment of the Viscount's ability and character should have been subjected to the necessity of resigning his official portfolio because of an untoward incident, for which he was in no wise accountable, is an unexampled instance of national humiliation and self-depreciation. The advanced stage of his diplomatic intercourse with other nationalities may be considered as having been highly probable to produce most satisfactory results; he certainly had the ingenious statesmanship that could cleverly adduce good reasons for reticence, and yet keep the political thinkers hopeful as to the full maturity of his efforts.

The manner in which the Viscount has been separated from his important duties, and the fact that no other post has as yet been offered him, stand out as a separate and distinct conbination of seeming unappreciativeness and injustice. Unpleasant as his resignation of office was to those whose confidence and respect he had won, the fate of other innocent official contemporaries resembled his, but compared with after results and the selection of each *confrère* for some other special service to the State, the omission of the Ex-minister of Foreign Affairs, as though his claims to the nation's respect and esteem were forgotten, produces an unpleasant impression.

It is still to be hoped, however, that some tempting opportunity is held in reserve; and it would be essentially appropriate if, in the innumerable changes, the Viscount should be sent to the Court of St. James's, where by virtue of his accomplishments and qualifications as a statesman his continuous influence might be operative. Eminent noblemen who are, at the same time, eminent statesmen, are not so plentiful as to be laid aside for trifles.

Yours, &c., COMPENSATION.

Tokyo, June 14th, 1891.

[We imagine that Viscount Aoki's present position is of his own choosing.—Ed. *J. M.*]

## DOCTOR HOWARD'S REPLY TO A RECENT CRITICISM ON HIS LECTURE.

To the Editor of the "Japan Mail."

Sir,—In your always welcome paper I find there appeared a letter on the 9th inst. under the heading "Professor Howard's Scientific Method," in which the author, under the pseudonym of "Secularian," asks in a tone which is not defiant, for me to inform him what was the year in which, as I stated in a recent lecture, 617 members of the British Scientific Association signed a declaration to the effect that "It is a perversion of science to cast doubt upon the Scriptures?"

In making this quotation, I said I would "simply interpolate it for what it was worth." This direct question, however, enables me to show that it is possibly worth more than I made it appear. This manifesto I am able to state is now in the Bodleian Library at Oxford. It was signed in 1865. In it there is not only the statement already quoted, but a further declaration of belief in the authenticity of the Scriptures and of the harmony of the Scriptures with natural science. Amongst the signators are Sir David Brewster, Sir Thomas Bell, and Lord Alfred Churchill. My first short and moderate mention of this manifesto your correspondent refers to as my "curious method of dealing with evidence." Having answered your correspondent's only question, I would prefer now to thank him for this opportunity of serving him, and close by signing my own proper name to this epistle. In the interest of Christian apologists, however, your correspondent has made it incumbent I should make a public correction. He has been kind enough to speak of me as an exemplar and representative of the Christian apologists of the 19th century. This statement is an injustice to that entire body, and might rightly, I think, be resented by every one of them. Being merely an ordinary but leisured Layman, I represent simply myself, and whatever I may have said has no value or significance except for what truth there may be in it.

In some introductony remarks on the various religions of different nations and the relation of religion to science, I quoted from Mr. Spencer "True Science is essentially Religious," and then a number of paragraphs from Prof. Huxley beginning "True science and true religion are twin Sisters." Your unduly generous correspondent insists that I knew and ought to have stated what was in the minds of these gentlemen respectively, other than what they said, and this in spite of the fact that Mr. Huxley follows up the word Religion with synonymus in which all English dictionaries I know of agree. He informs me of what I was before ignorant, that he knows that in my own mind I meant by the same word something totally different. I would not be discourteous enough to contradict, but in the connection in which I used the word Religion at that time, I was unaware and am still unaware of any ground for this allegation. The "sterner criticism" with which in chosen words your correspondent follows up his allegations on this point, might accordingly have been reserved. As I have instigated not a little of the more recent work done in the laboratory of Professor Huxley, I think I am speaking not wholly without knowledge.

Certain other chosen phrases implying a long and intimate acquaintance with the mind and the character of all the Christian Apologists of the 19th century, your correspondent has been incited to employ because, in the commencement of a distinct section of my lecture, I saw fit frankly to state that in what I had to say on that particular point, I must for convenience assume that we agreed as to the authenticity of the New Testament. Precisely the same course every teacher in every science is obliged to adopt. An hour's lecture or even a 24 hours' lecture would be impossible on any topic of any one of the sciences if on each occasion the lecturer had to begin at the first principles of the respective science and repeat the proof of them.

It should have been noted by your correspondent that the subject of the lecture in question was not the Authenticity of the Scriptures; it was not Religion; it was not Christianity; it was not any one of the incidental points to which his letter of generous criticism has been exclusively devoted. Notwithstanding the intimations of unscrupulousness in the methods employed by me in this lecture, I have not called attention to the manner in which one half of a sentence as I wrote it has been detached from the latter half, its place being taken by words which were not mine, and how the unmeaning nonsense resulting has been held up as a specimen of the lecturer's style. I prefer to call the attention of your correspondent to the fact that the subject of the lecture was "The Christ."

If he should see fit to read the lecture he will find in it several questions which might have some interest for him. On the main question, viz., "The Christ," I cordially invite him to answer at least two of these questions. Who was the Christ? 2. What was the Christ?

As his studies seem to have been specially in the direction of the Gospels, I would further suggest he might render a public service if, having tried as he has, to show who did not write them, he will now give a positive and incontrovertible answer to the following questions: 1. Who wrote Marthew? 2. Who wrote Mark? 3. Who wrote Luke? 4. Who wrote John? and what was the date at which they were respectivly written? In the evidence he may bring forward I would respectfully suggest that anonymous authors (the only kind adduced in his letter) be not selected as authorities. An anonymous author quoting other anonymous authors is not considered by everybody as deserving the attention which perhaps he ought to get.

I am, yours truly, B. HOWARD.

Ikao, June 12th, 1891.

## *M. BOISSONADE AND THE COURT OF CASSATION.*

The following is the opinion of Monsieur Boissonade de Fontarabie on the competence of the Court of Cassation in the affair of Tsuda Sanzo:—

The decision of the Court of Cassation in the affair of Tsuda Sanzo has encountered some criticisms which must not be suffered to obtain credence.

The judgment itself has not been criticised. It is in strict conformity with the Penal Code, the second article of which is opposed to every assimilation of a crime not provided for, to a crime provided for, whatever semblance of analogy may be discernible. In this respect the constitution is even more formal when it provides in Article 23, that "No Japanese subject shall be arrested, detained, tried or punished unless according to law."

The competence of the Court of Cassation has, however, been contested. Further, surprise has been expressed that the trial was conducted *in camerâ*.

With regard to the latter point, the right of the Court was formally provided in the 105th Article of the Law of Organization of the Courts of Justice, and in the 59th Article of the Constitution, which sanctions the exclusion of the public when "publicity might be prejudicial to tranquillity, good order, or morality." In this case there was reason to apprehend demonstrations contrary to good order and tranquillity.

The criticism as to competence is more specious and demands precise refutation.

It has been contended that, so soon as the crime did not appear to the Court to be included in the provisions of the 1st and 2nd chapters of the Second Book of the Penal Code, the common law became applicable, alike in respect to the competence of the tribunal and the nature of the penalty; that the Court should then have declared itself incompetent and should have sent back the case to the ordinary tribunals of First Instance and of Appeal.

It is pretended that by not adopting this course, the Court prejudiced the cause of the accused in a dual manner, since, first, it deprived him of the guarantee of the two first degrees of jurisdiction; and, secondly, it deprived him of his natural judges, this latter action being in contravention of the 24th Article of the Constitution which provides that "No Japanese subject shall be deprived of his right of being tried by the Judges determined by law."

I am persuaded that these contentions involve a double misconception of the true principles of competence.

First, the inferior degrees of jurisdiction are not a guarantee. The guarantee exists only in recourse to higher jurisdictions.

Secondly, the Court of Cassation was the natural and lawful judge of the accused.

I proceed to examine these two propositions:—First: When the Law of the Organization of the Courts gave competence in first instance to District tribunals, and in second instance to Courts of Appeal, it did not pretend that judgments in first instance would serve to enlighten the Courts of Appeal, any more than it pretended that judgments in appeal would enlighten the Court of Cassation. To make the light come from below would be unreasonable. When a superior tribunal is required to adjudicate upon an appeal from a judgment, it has to consider the judgment as non-existing in respect of all the chief objects of appeal. If matters have to be submitted, as a general rule, to jurisdiction of the first degree by an inferior tribunal, it is because of the practical impossibility of having all cases judged by Courts of Appeal, these being few and far removed, perhaps, from the venue (there are but seven such Courts in Japan). In providing that crimes and delicts shall be first tried by District and Local Courts, the law hopes that many cases will end there, whether the finding be conviction or whether it be acquittal, because the condemned person or the Minister of Justice will not always desire another decision on appeal. Nevertheless, the right of appeal from these judgments of inferior tribunals exists, and it is consequently by the second degree of jurisdiction that a guarantee is provided. The same argument holds in respect of Courts of Appeal to which recourse must be had before going to the Court of Cassation. Many cases will end in the Appeal Courts, recourse to the Court of Cassation thus becoming a last resort, of which it is to be hoped that advantage will not always be taken. So little does it enter into the spirit of the law to regard jurisdiction in first instance as a guarantee to the accused, that in many countries (notably France) the misdemeanours of certain high functionaries are carried at once before Courts of Appeal (*vide Code Instruction Criminelle, Art. 479* and *Loi du 20 Avril 1810, Art. 10*); and undoubtedly the object has been thus to afford stronger guarantees to the accused and to society. In all countries, when a crime becomes cognizable by a criminal tribunal, if the charge does not extend beyond a misdemeanour, the tribunal does not send the crime to be judged by a Court of First Instance, but of its own competence inflicts the penalty for a misdemeanour. Similarly, if the progress of the case reveals crimes or misdemeanours connected with the original charge, the tribunal may examine and judge them itself. It has never been claimed that in such cases the accused is deprived of the guarantee of First Instance. Finally, the Japanese Law of Organization of the Courts of Justice, when it invested the Court of Cassation with competence to take cognizance of crimes committed against members of the Imperial Family, or of crimes imputed to the latter, certainly did not contemplate diminishing, in any respect, but on the contrary sought to augment, in the former case the guarantees offered to society, and in the latter the guarantees of the accused. In fact it reserves these affairs for trial by the judges who are accounted the most enlightened, the most experienced, and the most independent, and who, at the same time, sit in a greater number.

Second: In the case of the affair of Tsuda Sanzo, the District Court of Otsu in the first place declared itself incompetent, and it was then that the Court of Cassation was invoked at the instance of the Minister of Justice, who claimed, doubtless, that a crime against the heir to a foreign throne could be punished in the same manner as a crime against the Japanese Prince Imperial. But whatever have been the views of the Minister of Justice, concerning which I am not informed, the Court of Cassation became seized.

The question of competence could not be pleaded separately from the case itself. It is clear that the Court could not declare itself competent or incompetent because obtaining cognizance of the true character of the crime committed by Tsuda.

The discussion turned solely on the question *of law*, for the fact of the attempt to murder and the quality of the victim were not disputable. The Court of Cassation, then, was necessarily called on to say *the last word* on the question of law.

Suppose that the affair had passed the two inferior degrees of tribunal and that the Court of Appeal had decided to place the crime against the Czarevitch in the same category as a similar crime against the Kotaishi (Japanese Prince Imperial). Then the Court of Cassation would have overruled that decision, and would have itself pronounced sentence of penal servitude for life, in conformity with the provisions of the Common Law relating to murderous assaults.

Was it not, therefore, more natural, more simple, and quite as just, that the Court of Cassation, having arrived at the conclusion, after the pleading, that the crime did not involve any other penalty than that prescribed by the Common Law, should retain competence and inflict the penalty itself?

Suppose, even, that the Supreme Court had sent the case back to be heard in first instance by the ordinary Judges, declaring itself incompetent (which would have amounted to a decision that the crime was a common assault); that the case had afterwards been adjudicated in the same sense by the Appeal Court of Osaka, and that it had then been carried to the Court of Cassation by the Procurator-General, the accused would not have failed to plead, with some appearance of reason, that the Court had already pronounced in his favour on the point of law, and that it was consequently prevented from pronouncing in the sense claimed by the Procurator-General. Therefore it was necessary that the Court should not be bound by a decision which had not been preceded by a full hearing.

These conclusions, then, must be accepted:—

First, that Tsuda Sanzo was not deprived of any guarantee by being judged altogether by the Supreme Court.

Secondly, that he was not deprived of his natural judges.

---

In a recent lecture at the Royal Institution, London, Lord Justice Fry, F.R.S., said that to the peculiar structure of the turf moss great results in the history of the world were to be attributed. This is as true of Great Britain as of any other country. But for the moss the forests that once covered the land might still be standing; but for it large tracts of country would still be lake or sea; but for it every freshet in a highland river would be a flood.

## *DR. FAUSTUS, JUNIOR, PH. D.*

Away back some six years ago Frank Webster was about one of the smartest pressmen in Japan. He is dead now, and gone to —— Well, I shouldn't like to be over-dogmatic regarding his destination. He had his faults like other folks, but he had his good points too, and among them a rough and ready way of helping a lame dog over a stile was by no means the most insignificant. And he was not at all particular as to the sex or the colour of the clandicant canine either. He was withal a very tough subject indeed, generally in hot water, and thoroughly in his element when up to the armpits in mischief.

One day I chanced to be lounging on the verandah of the Hiogo Hotel watching the departure of the launch with the passengers for the out-going French mail, when I caught sight of Webster handing a lady on board with the air and style of a Louis Quatorze courtier. She was a fine creature, too; any one could see as much at a glance. I was considerably taken aback at the spectacle, inasmuch as I knew Mr. Frankie's circle of female acquaintances in the Treaty Port to be of a very circumscribed circumference indeed. I began to wonder what mischief could be in the wind now, and went on to cast up the *pros* and *cons* of the probability of an elopement. After cogitating for the best part of an hour, and deciding that it was just possible that the community was to be treated to the luxury of a first-class scandal, I had my castle of cards all knocked into fragments by a forcible smack on the shoulders, and an invitation to come round to the office of the *Hiogo Intelligencer*. I went; there used to be some splendid stuff in the cup-board in the upstairs room.

"Now," began Frankie, "I know you're just dying to know all about it, and I'll tell you without any pumping. I've got a few minutes before the final revise comes up, so here goes. Light up!"

He pushed his cigar-box over after picking out a cheroot for himself. He then struck a match, and putting his feet on to the desk in front of him, tilted his chair back, till the centre of gravity was on the imminent brink of danger, and proceeded:—

"Perhaps it was his abominable self-sufficiency that first set me against the little man. And besides he had the intellectual hall-mark of the Potsdam drill-sergeant stamped from top to basement all over him, and the aggressiveness of the Potsdam drill-sergeant is at once overwhelming and beastly. Also withal he was childish, and ——but it really serves no earthly purpose to trot out all his drawbacks at the beginning of the yarn.

"It was on the trip from Hongkong to Yokohama that I first ran across him. When I got on board the boat at Kowloon I felt seedy; by the time we had got into the Formosa Strait I was filthily ill. Mal-de-mer? Nothing of the sort! Malaria, and regular stiff dose of it, at that. I caught it from sleeping a few nights in Tanjong Pagar Docks, where there is slime and garbage and evil smells galore, and amply sufficient to furnish the *materiél* of a brand new Oriental Inferno. However they—that is the passengers and the officers—all said it was sea-sickness. They were horribly unsympathetic, and this little beast was the most vicious in the whole crowd. They tried to poke fun at me and my shakes, and his clumsy maladroit witticisms in execrable English and in still more execrable taste would have rasped the coarsest moral and mental fibre of the most pachydermatous Irish navvy that ever did the government stroke on a state railway-line. It was no use thinking of knocking him down, for I was as weak as female cat newly delivered of nine sightless kittens. And besides even in that pithless and spineless condition I was really afraid of hurting him. For he looked fragile, fearfully and wonderfully fragile, reminding you for all the world of one of those gim-crack spindle-shanked chairs that cause you such qualms and trepidation when you pay your duty call on certain old maids cursed with æsthetic moral twist. Not that he was lean and hungry-looking, or that he at all gave you the impression of being under-fed. It wasn't anything of the sort that led you to bunch his *tout ensemble* with ricketty and rococo furniture. For he was plump and rotund and sleek,—if you were at all inclined to be malicious and uncharitable you might even say greasy. To state in so many words what was at the bottom of this seemingly far-fetched association of ideas would not be at all easy, yet the association in question was there undoubtedly—strong, unmistakeable, and permanent. Possibly enough it was his dumpy little feet and the slender understandings on which his squat and protuberant corporation found its support that were accountable for the mischief.

"But anyhow he was a nuisance. Yet on shipboard it does not do to be too captious; if the attempt at finding a soul of good in things evil has nothing else to recommend it, it occasionally

Digitized by Google

serves to occupy you and to while away the time when you have used up all the other limited devices at getting through the heavy intervals between eating and sleeping on board an ocean-tramp. And on nearer acquaintance I found a lot of good in him. He was so amusing that between the round of shivers that made my poor existence a curse I laid myself out to study him and to get at a workable chart of the cranklings and depths and shallows of his psychology.

"This undertaking was not a task of superhuman difficulty. It was as natural for the little man to make display of his mental garnishings and of his peculiarly strong points as it is for a peacock to spread out his tail on a sunshiny day when the eyes of the admiring females are wide-open to mark the gorgeousness of his beauty spots. Strong points I think I remarked; I ought to have said weak ones also and more especially.

"Schmoller-Schmidt he called himself, and Ephraim was his Christian name. At least Ephraim stood before the double-barreled surname on his pasteboard, but as to its being really and truly a baptismal title I have may doubts. It has an Old-Testamenty Hebraic ring about it, and Mr. Schmidt sported the orthodox and conventional emblem of unmistakeable Hebraic descent. The Mount Athos of a nose, which supported the gold-rimmed spectacles through which his colourless eyes blinked and scintillated, was eloquently Semitic. Not that I regard that as anything to be ashamed of. There is usually a good deal more than the normal 48 oz. of brains in the skull which lies to the rear of a protuberance of this peculiar cut, and the convolutions thereof are usually also of a complex and superior order. As a rule an olfactory organ like that of Mr. Schmoller-Schmidt is the property of a man of a good deal more than moderate ability. And to give him his due, Mr. Schmidt along his own peculiar lines was no sawney.

"These lines generally speaking were Oriental Literature, from Sanskrit and Pali down to Urdu and Hindostanee. But his peculiar weakness seemed to be 'Chops.' It was his constant boast that he knew 40,000 of them, and his tallest brag that he had invented several original ideographs of his own; ideographs, too, that were twisters to make out. For as Mr. S. condescended pityingly to explain, the especial merit of a "chop" is its complexity and reconditeness. The supreme aim of a Chinese scholar, according to him, is to write something that nobody else is learned enough to read.

"But although flapping his wings and crowing most lustily on the ideographic dunghill he had made peculiarly his own by a nine years' consumption of the midnight oil, he was not by any means given to hiding his light under a bushel when other topics came up for discussion. When people got sick of him and his sinology and felt a perverse but excusable desire to fall upon him and chivey him from the smoking-room with cushions, he would at once climb down from the back of his hobby-horse and valiantly meet you on your own ground. No matter what it was you chose to talk about, you might safely count upon finding the Doctor —— he was a full-blown Ph. D. of Göttingen no less—in the objective case. Painting, sculpture, architecture, finance, politics, sociology, and the proper way of making sauerkraut—on each and all and on everything else besides he seemed to have "ideas." And he was not at all *ketchimbo* with them either, he "parted" with them to all and sundry as a prodigal makes away with the hoardings of a millionaire defunct parental relative.

"He seemed to be as musical as the whiz of a musket-bullet, or the caterwauling of an amorous feline, yet that did not prevent him from having "notions" about Bach, and Handel and Donnizetti and Wagner. He sadly shocked Miss Tomkins, our sole and only first-class lady passenger, by declaring emphatically with a thump on the table that the tune of "God shave de Queen" was fit only for the nursery. He was not even put to the rout when she suggested that it might also be appropriate in a barber's shop. That evening she confided to me later on that Mr. Schmidt was like a veritable barbed wire-fence or a well-greased football. Although I was very down in the mouth at the time with the shakes, I couldn't but laugh when she told me where the resemblance in question lay.

'"You see, you can't sit upon him, and it's no use trying to," she said, after hesitating a little, her words coming like the rush of a mob of stampeding cattle, as she caught up her skirts and fled. Miss Tomkins in short had but little love for him, and the ladies in the second-cabin did not seem to have much more. But this did not appear to occasion the Doctor any great trouble. He always found ways and means to thaw the frigidity they occasionally endeavoured to assume for his benefit. He would attack them and their remarks at table in a way that inevitably set their blood on the boil and their indignation in a flame. It was useless for them to attempt to retaliate. Their *bête noir* was absolutely impervious to their feeble efforts at ridicule. As far as keeping the females of the second saloon in order, a model barn-door rooster could not possibly have done better in his feathered harem. Only one of the whole community contrived to give him any trouble, and that was a squaky, tight-lacing sort of second cousin of his who was travelling under his care, consigned to a petty Japanese official who had promised to endow her at the altar of Hymen with a legal and regular title to sew on the buttons that got adrift from his European continuations. But even her squakiness and fireworks exhibitions of hysteria did not occasion her escort any very considerable amount of trouble and anxiety. When she did think fit to blow off steam, he looked angry enough and muttered raspy impolite things in Hoch Deutsch and half a dozen other tongues, but he always nevertheless contrived to shunt the burden of her nervous disturbances on to the other ladies in the cabin and above all on to the doctor. For what was the use of paying for an *Arst* he argued, unless you got something out of him for your money? And as he himself was always so beastly well, in spite of his glass-this-side-up-with-care appearance, he was not at all sorry that some one connected with him should find occupation to keep sawbones off talking philology, about which his ignorance was worse than crass.

"For the Doctor of philosophy and the Doctor of Medicine had several times joined issue on the Origin of Language and the connection of the Indo-European with the Mongolian tongues. To a man who knew even but the outlines of the question the encounter was amusing. The combatants wanted badly to bit each other, but although they drove out hastily enough, their blows were all spent in thrashing the air. They seemed never to get into grip with each other at all. The Doctor of Physic was a heavy, ponderous, slow-witted giant, his putty-like expressionless face all seamed with the scars of schläger-cuts. Yet this philological war was not exactly a case of Goliath and David. It was rather a diverting exhibition of an inebriated elephant in a china-shop bent upon charging about promiscuously and at the same time smashing none of the crockery, and of an intelligent flea out for exercise hopping and skipping about with an idea of putting a keenish edge on its appetite. Both performers were on the boards simultaneously, but the elephant did not tread upon the flea, nor did the flea think it worth while to operate on the hide of the elephant.

'"But," sawbones would ponderously declare, "Max Müller says ——."

"Ah, Max Müller! He is a dear friend of mine. I have got such a nice letter from him! And one from Weber too. I ——."

"Max Müller says," went on the Painkiller still more decisively without heeding the interruption, and laboriously sawing the atmosphere in front of him with his dexter fist to give point to his argument. "Max Müller says that the Chinese language ——."

"Chinese language! Well I think I know something about that; I know 40,000 characters, and I have invented several new ideographs of my own for electricity and other modern scientific terms" (the flea, it should be remarked talked 199 to the elephant's dozen).

"That the Chinese language belongs to the Turanian family and that"—the elephant proceeded.

'"I tell you I know all about Chinese! I knew 40,000 characters and ——." "Any knowledge of Sanskrit can therefore be of no service to you for the acquisition of Chinese, belonging as it does to an ——."

'"But I don't care for Max Müller. Professor Roth gave me a beautiful copy of the Mahabharata. It cost 300 hundred mark—three-hundred-mark, Mein Herr; just think of that sum for a minute and realize what it means. I was his favourite pupil."

'"—— Entirely different stem. Therefore the man who knows Sanskirt well is likely enough ——."

'"Sanskrit! Of course I know Sanskrit! Didn't Professor Roth give a three hundred mark—a *three-hundred-mark* copy of the Mahabharata. I was his favourite pupil ——."

'"—— To be entirely ignorant of Chinese."

"Here the Doctor of Philosophy would start up in wrath and dudgeon and hurl contemptuous and semi-abusive epithets at the head of the *Doctor Medicinae*. Then he would rush off in a rage to the second cabin, where things would be uncomfortably sultry for the next half hour. Meanwhile Sawbones would turn round and confide to the me the fact that Dr. Schmidt was a conceited puppy. A quarter of an hour later Schmidt would meet me and take me aside to impart to me the secret that the man of physic was utterly guiltless of any knowledge of comparative philology. I was and still am inclined to believe that both were equally veracious.

"Of course there is a slight touch of caricature in the dialogue given above. But only really a very slight touch. The exaggeration is after all infinitesimal. When Dr. Schmoller-Schmidt's conceit did get a show, it spouted like a veritable artesian well.

"He one evening came aft and informed the first-class passengers in a body that in one respect he was the most valuable man in the East. When we expressed our scepticism by a mild elevation of the eyebrows, and looked inquiringly for further particulars, he went on to inform us that a translation of the works of certain Chinese sages would be simply a boon beyond price for the West, and that only a man with a peculiar combination of very rare qualifications could undertake the task. There qualifications were in the first place a knowledge of Antediluvian Kanji, and in the second, the inspiration of the Pierian maidens.

'"Now," he went on, "I know old Chinese; no one can deny *that*. And I am also a poet!"

"Stood him? Of course I did! He was so infinitely amusing. Miss Tomkins *did* go and look over the taffrail, when, with his thumbs in the armpits of his waistcoat and what a respected Hibernian friend of mine would call the 'shtrut av an am'rous paycock,' he publicly proclaimed himself the child of the Muses. But then Miss Tomkins had a fine and delicate nervous organisation, being highly sensitive to smells of all sorts.

"Just about this time he thought fit and proper to honour my insignificance with his attention. I fancied it was firstly because I submitted to his teasing me about sea-sickness, secondly because I listened to him, and, thirdly because other people had got tired of him and wouldn't. Anyhow inflict himself upon me he did. On closer acquaintance I found him to have a lot of good points. If he was communicative to a fault, he was not at all inquisitive. He sketched out his future career in the Empire of Dai-Nippon for my especial benefit. He meant to attach himself to the Legation in the capital; his knowledge of Chinese would be found simply invaluable by the Minister. In that line he was sure he had no rival in the country, and from Secretary of Legation to Minister was not after all such a far cry. And of course it was in accordance with the traditions of the nation to have scholars and savants as its representatives at Foreign Courts. Was not Niebuhr once Prussian Minister at Rome, and was not Bunsen Ambassador to St. James's?

"And," he would wind up, "I know more Sanskrit than Bunsen did, and neither Niebuhr nor Bunsen knew Chinese at all, and I have got a thorough grip upon it. I know 40,000 characters, and besides I have invented some new ideographs of my own. Yes, my chances are brilliant, very brilliant. And besides you know German influence is now becoming paramount in the East, and you may be sure it will not suffer in my hands."

"During all this time, to do him justice, he never pestered me with impertinent questions. He took me entirely on trust, a thing for which I was duly grateful, inasmuch as I do heartily detest being bailed up with, "Who"? "Whence"? "Whither"? and "How old"? No! In that respect at least, he was a gentleman right to the tips of his finger nails. If you knew how to manage him he was a delightful companion. Only remove the spigot from his brewer's vat of self-conceit and stand clear, and you had an entertainment fit for the gods. The flood then flowed out and on and on in a full and clear and refreshing stream. It is true that its odour was occasionally a trifle pungent, but that did not matter much to a citizen of the world.

"I don't know how it was, or what suggested it—perhaps it was his thin-cut flexible mobile lips with their covering of down just struggling into sunlight—I don't know what it was, but one day I found my head ringing with Mephistopheles' *Du übersinnlicher sinnlicher Freier*, as I sat looking at him. I couldn't help laughing at the idea after a minute's reflection. No! No! his weakness could not possibly lie in that direction. In spite of the fits of poetic phrenzy to which he professed to be addicted, he was altogether too dry and passionless to ever err after the fashion of King David or of Solomon or of Faust. Besides he was too much wrapped up in his own sublime personality. I put away the notion as utterly ridiculous and idiotic. And yet, but for that notion it is extremely unlikely that Dr. Ephraim Schmoller Schmidt would ever have figured as the hero of this most veracious recital. The notion in question was one of those quick intuitive glances into the raw of character that come goodness only knows whence. It is only years afterwards that I realize the truth of it.

"During the last two days of the voyage, I was utterly downed by my enemy. I had to keep

Digitized by Google

below and consequently saw nothing of my fellow-passengers till I staggered up on deck with the idea of getting ashore. And even then it was only a sort of misty dissolving view that I got of Dr. Schmidt. He was sitting on a thwart of a rocking sampan with his back towards me, and as he disappeared in the raw and rolling fog of the morning I found myself thinking of the Lord passing before Moses in the Clefts of Sinai.

"When I got on land I felt as if I had fallen into the lowest depths of Purgatory, with the chances all in favour of the bottom giving way and dropping me into real live raging hell-fire. I fled for refuge to the nearest hospital, where I spent the best part of a fortnight spread out on the flat of my back. But of course that has nothing to do with the story.

"Thus it came to pass that I saw nothing of Dr. Ephraim for the best part of a month. One day I was returning from Kyoto—I had gone up there after I had fled Lot-like from the hospital—when who should flop himself down beside me in the *ckuto* railway-carriage I was in but Dr. Schmoller Schmidt? He at once opened fire. To begin with, all unrequested, he discharged a broadside of autobiography. The rapidity of incident was staggering. The number of literary suns and planets native and foreign, male and female, that had taken to revolving round Dr. Schmidt within the space of one short moon was bewildering and overpowering. One could surely be forgiven for cherishing an uneasy suspicion that his system was essentially Ptolemaic. Also for believing in the possibility of the appearance of some brute of a Copernicus unfeeling enough to demonstrate that the Earth—*i.e.* Dr. Ephraim Schmoller Schmidt—was not the main-spring of the local social system after all. For as you know, almost every community is cursed with the existence of at least one of those awful individuals whose fad is a perpetual quest after "Teruth"—the naked "Teruth," and of course spelled with a capital T. They are bitter, bitter *kusuri* for self-complacency,—bitter as quinine. But they are useful in helping to wrestle with the malaria of over-weening self-sufficiency and conceit, and so far as effective in this direction they must be regarded in the light of public benefactors.

"When I asked him about his appointment at the Legation, however, he deftly changed the subject. This I took to be an indication of the discovery on his part of what I was aware of all along; I mean the fact that there is never any lack of men of first-class sterling ability in the German Embassies. Bismarck knows better than to send mere fools and figureheads abroad to make the Eagle a laughing-stock. And as at present, so away back in the early "eighties," the *personnel* of the Kaiserliche Deutsche Gesandtschaft in Japan was full chock-a block with linguistic talent of all kinds. It struck me that it had begun to dawn on Dr. Ephraim that he did not by any means hold a monopoly of "Chops."

"At the same time, though, he thought fit to wither me with a glance of contemptuous pity when his eye lighted on the leaflet of "Japanese words and phrases" I was then valiantly but hopelessly wrestling with.

'"Lend me that thing for a moment, willyou?" he said brusquely; "I want to see when the train returns."

"I ought to mention—but perhaps you know—that friend Willoughby's "Vocabulary" is adorned rearwards with a Railway Time-table. He looked at it for the best part of two minutes perhaps, with his occipital muscles puckered into a judicial frown, and then returned it with a scornful "So."

'"I don't want to see the time-table any more," he remarked airily. "It is quite easy. I see the plan, and I memorise the whole thing in a few seconds. A wissenschaftliches methode of doing vork and a good memory save much troubles."

"His eyes blinkingly challenged my wonder and admiration through his spectacles; and I did look at him with wonder, and I was going to say admiration, but that would be a lie. He then went on to tell me what the mission of the Great German Empire was. In the first place it was to be *selbstständig*, utterly independent of any Dreibund whatsoever. It was to crush France; it was to humiliate Russia, and it was to keep Austria, Italy, and His Holiness the Pope in leading strings. This was amusing enough, but when he went on to say that England and English influence were everywhere to be wiped from the political and industrial chess-board, I got a bit irritated.

'"Here in Japan the English einfluss is becoming gar nichts. The Japanese do not love you Engländer. Their army is on the German model, their commerce will be on the German model, and everytink else also will be German. Everytink, everytink, I tell you will fall into the hands of the Germans."

"I asked where the cars we were riding in were made.

'"Why in Germany of course, and the engines too."

"That was a lie, but I didn't say so.

"The Japanese were at the beginning of that virulent attack of "German measles" they suffered so badly from some two or three years ago, but they were not quite so far gone in their madness as to import all their railway rolling-stock from Deutschland.

"A few minutes after this we reached Kobe Railway Station and the multitudinous patter of hundreds of pairs of clattering *geta* sounded a relief to the drums of my ears. The Doctor said a brusque good bye and summarily elbowed a way for his shabby brown-overcoat through the crowd to the turn stile. I caught sight of his little round hat angrily battling onwards amidst a jabbling sea of bobbing shoulders, and from that day to this I have never once set eyes upon his phiz.

"What has all this to do with the yarn about that girl? Just hold your whisht and we'll come to that in good time enough. You're so darned impetuous,—just like a bloomin' globe trotter trying to outfly the swallows, or to break the telegraph-record, or to do six mountains, twenty-four waterfalls, thirty-six temples, and a hotel all in one day. You've not the ghost of an idea of artistic development. Telling a story, man, is like courting a woman; you must lead up to the critical point by degrees. *In medias res* you say. Bosh! Into a muddling mess, you mean! No! no! Take the straight modern tip and begin at the beginning and advance *go yururi to*, and you'll get there all right and easy.

"But where was I? Oh, yes! Well I did Japan, and then I had to walk off as "special" to an expedition that meant to cross New Guinea. Got over? No! I got wounded, and pretty nearly qualified as the last scion of an ancient and an honourable house. A brute of a nigger sent a poisoned arrow whizzing through between my legs about ten inches above the knee. Yes. I *have* long thigh bones, and it's deucedly lucky. After that I was sent to write up sugar and cotton in the Southern States, and then I struck these lovely and enchanting shores for a second time, where among other things I have to run the *Hiogo Intelligencer*. Tired of it, do you ask? In the words of my Hibernian boss, "It's mesilf that's outrajisly sick of it." But it has its good points, but that's neither here nor there.

"You know my mate, Rossignol don't you? Of course you do. Let me tell you, then, that you know a real, live man, and not a creeping crawly slimy thing that has succeeded in getting upon its hind-legs and obtaining tick at the tailors. He got me out of a tight fix when I was "special" for the New York *Sun* in Tunis in 1880, I think it was, or perhaps 1881. It was at Kairwan—but that's not exactly to the purpose at present.

"Well, a few weeks ago, he hinted to me he had something on, and asked if I would help to see him through with it. He told me the argument of the piece as we bowled along to Osaka like a snail out for a holiday at his mother-in-law's funeral.

'"You see I'm a married man now and it won't do for me to go vexing the wife. So you've got to to do duenna for me. And mind above all things you're not to contradict me when I say you don't speak French."

"I remarked that it would need a bigger lie than that to make me call out that he was an unblushing perverter of veracity—especially in ladies' company. For by that same token the French I do patter is a sort of cross between Joseph's coat and the structure of the Psalmist's body—it is a patchwork of many colours fearfully and wonderfully put together.

"We got out at Osaka railway station, and after half an hour's navigation in *bashas* and *kurumas* we found ourselves in the outskirts of the Vanity Fair of the Venice of the Orient. We plunged into it, and after threading the mazes and alley-ways of its back-slums we at last fetched up with the casino-like Theatres of the Dotombori looming in front of us as a landmark. The neighbourhood was poor; the houses were low and flimsy, and we expected a general epidemic of dinginess and dirt and squalor, but, we didn't stumble across it. An aggressive and irritating odour of respectability pervaded the locality generally speaking; and the narrow alley-way into which we were finally directed especially so.

"We went hunting around inspecting the miniature perpendicular "name" cards, over the *genka;* like a pair of sleuth-hounds on the scent for a breakfast.

'"Hallo! Here we are!" I said as my eye caught one particular tablet adorned with a scrabble of European pot hooks in lieu of the undecipherable contortions of Japanese hieroglyphics; '"*Mademoiselle Louise Balbi.*" Now then let us fix our neck-ties and prepare for the enemy. You, first please!"

"We were disappointed; not at home! At least that was the sum and substance of the information we contrived to rescue from the weltering flood of honorifics that poured from the black-toothed ball of humble politeness vigorously polishing the tatami with her forehead in our honour.

'"But if any honorable foreign visitors should arrive in the honorable absence of Louise Sama, would the honorable visitors condescend to honorably wait in this poor and unworthy dwelling till she returned? Before five o'clock her honorable return certainly and positively would be."

"We held a hurried council of war and decided to consume half an hour in exploring the neighbouring Alsatia.

'"Funny," remarked Rossignol, who had got a peep through the *shoji*, "She can't be so far on her beam-ends as I fancied. She told me in the train that she had nothing to eat, and that she was living in a den. Humph! the den seems to be rather a sumptuous retreat. Carpets, chairs, tables, books, and I don't know what not. It seems it doesn't do to take things too literally when it's a young and pretty woman that's your informant."

"We set out and fetched a compass round the shows and sights of the locality. When we got back, we found that Madamoiselle Louise had become infected with Japanese notions of punctuality. Five o'clock had come, but the object of our pilgrimage hadn't. So we accepted the invitation of the painfully humble doorkeeper to step in and and "do a hanging of our honourable loins."

"We had expected to enter a hovel; we found ourselves in a fairy drawing-room. The room was an ordinary six-mat Japanese *sashiki*—only something had been done to it that eliminated its "Japaneseyness" almost entirely. A plain carpet and a rug or two upon the floor, a table sizeable enough for the first-cabin of Noah's Ark, half-a-dozen or so old high backed chairs ribbed with fret-work—they might have come out of a mediæval Norman chateau—were something to begin with. But they were responsible for only part and the least part too of the effect. It was the trinkets on the table, the photographs and prints round the walls, and above all the fine array of volumes in an alcove that gave one the notion of a Parisian boudoir in which artistically painted Japanese *shojis* counted for one feature among the freaks that go to make up the furnishings of a female æsthete's withdrawing chamber.

"What the deuce!" muttered Rossignol, starting up and passing across the room at two seven-leagued strides. "What the deuce is the meaning of this gun? That fishing-rod I can understand; it may have been a present from a Japanese, or she may have bought it for 10 *sen*,—but this gun! Let me see!" he went on taking it down from the peg on which the weapon was strapped. "By the living Jehosaphat! It is no toy as I fancied it might be, but a real live death-dealing Chassepot!"

"He stood with the thing balanced in his hands in helpless perplexity. Then he thrust it back into its canvas case, with his forehead puckered into furrowy wrinkles.

'"These riding-whips too"—he proceeded to himself shaking his head sapiently. "And this photo.'

'"Well, I do declare! If it isn't the hussy herself! Whew-ew-ew" he exclaimed holding out the cabinet-size to me and looking just as if some one had tilted him on to his wrong end by mistake. The group was an interesting one. *Imprimis* a horse and a dog; the dog crouching on the ground and curled up blinking in the acme of comfort, while a fine high-stepper of a steed had the graceful lines of his curving neck beautifully brought out by the position he had been forced to assume. His head came over the shoulder of a young cavalier in close-fitting double-breasted jacket, tight-riding breeches and Hessians coming up almost to the knee, with enormous spurs on the heels. The left arm was thrown caressingly over the moke's glossy sheeny neck, and the uncovered close-cropped head was thrown back upon the animal's near-shoulder. The most prominent feature in the landscape however was a moustache that curled with all the bristliness and ardour of a grenadier in the lists of war or of love and meaning business. "Well, if that is not a man, it is a wonderfully good imitation of one," said I.

'"An imitation it is, my son" returned Rossignol, "The woman that marries that man will wed neither a bachelor nor a widower, nor will she be the means of driving a benedict into bigamy. That's Mademoiselle Louise Balbi herself in the very flesh—and a pair of riding breeches."

"It struck me that we were in for an adventure; only the protagonist in the piece was deucedly slow in coming on. To while away the wait I took to overhauling the books in the alcove by way of a substitute for an overture from the orchestra.

"They were a fine lot tastefully bound in black, almost as enticing in their way as a widow of four and twenty in her weeds. De Musset, Beranger,

Digitized by Google

La Fontaine jostled with Voltaire and the Contrat Social, while La Sainte Bible lay cheek by jowl with that most scandalous and unholy production "Les Contes de Boccace." Atop of the neatly packed and labelled array lay bundles of files of old *Figaros*; so trimly and tidly folded and arranged that no creature with a real indefeasable title to the use of male inexpressibles could ever have been guilty of putting them there. Let Mademoiselle Louise ride like a trooper as much as ever she chose to, she had evidently not unsexed herself in the matter of that delightful female sense of order and tidiness, which like a low voice is such an excellent thing in woman.

However, time went on, and we were getting to the end of our patience and our resources. It was now well on towards six and we had got up to go when the landlord and his spouse appeared and flopping down on their heels, began to polish the tatami with their foreheads, *Gomen-nas-ai-ing* and requesting the honorable guests to do an honorable waiting for still a little longer.

'"Now, just watch the performance of these d——d fools;" blurted out Rossignol with impatience. "Let's listen to the duet; perhaps they'll tell the truth by accident."

"In the confusion of the pelting hail storm of honorifics that rained upon us we had a lot of difficulty in pulling the narrative straight or in fact in getting any glimmering of sense to emerge at all. So we requested one of the parties to shut-up, and asked the other to proceed without an accompaniment. The male marionette, blear-eyed and close-cropped, then continued his parable, —he kept on picking fibres from the matting all the time, and looking at them for inspiration— and told us that Louise Sama went out every Sunday afternoon to put flowers on the tomb-stone of a little girl that had died some time ago, and that ordinarily she got back by five o'clock. "To-day, because I am sick with sore eyes I did not draw her kuruma and therefore she took another kuruma-ya, and therefore she will be a little late perhaps," etc., etc., etc.

'"Humph," said Rossignol, "I see how the land lies. She's in debt and these cattle scent money in our visit, and the smell of hard cash is very sweet to their nostrils at this New Year's time."

"We could wait no longer, and so we fared forth into the shades of night and the smells of the street, accompanied by him of the blear-eyes who kept running and peering about into the darkness like a hound on the scent. He was in a great state lest we should escape.

"We had got about three hundred yards on our way when there was a thundering clatter of *geta* and flying pebbles, and a whirlwind of streaming Japanese garments fell upon our rear with a volley of "*kimashita, kimashita, kimashita!*"

"We turned round and had almost reached the house again, when a patch of white bounded out of the darkness with a joyous exclamation.

'"Ah, Vous êtes venu!"

'"Oui, Comment va-t-il? Etes-vous gentil?"

'"Ah! oui, et vous?"

"And so on and so on, till Rossignol was forcibly whisked into the boudoir. I stood outside in the cold with my nose all out of joint till philosophy came to my aid with a reminder that in this affair I was to be merely a *kōphon prosōpon*, and not even a second fiddle.

"At last Rossy thought fit to shout to me to come in. I was introduced as being utterly guiltless of understanding *Parlez-vous*, which was a lie, and as *mon ami inseparable*, which is true enough when there is a row on, or as long as there is any liquor about.

"I looked at the photograph on the wall and then squinted at the original. Barring the moustaches, the inexpressibles and the top-boots the likeness was a good one. The jacket was the same in both instances; now somewhat old, and worn, and frayed, yet neat and tidy withal. It was open below the throat, where a huge white starched breast-plate with a single stud in it harmonized perfectly with the pallor of the face above it. It was a young face, possibly 23 or 24 years of age at the outside—but experience if not time had begun to scrabble a history upon its lineaments. The brow was low and broad, the large watery eyes were set widly apart, the mouth was big and prominent with thin lips that occasionally shut with a snap of determination over two gleaming rows of teeth that had evidently never called for the kind offices of the dentist. The ears were small and tiny, and sat like a pair of pearl-shells well back from the cheek-bones. In ordinary circumstances it would have been a witching face—it would be a powerful one under any conditions—but now it was pinched and haggard and when certain reminiscences were called up, wolfish. But when she smiled—and Rossy can hold up his end of the log with any man in tickling a woman's phiz into ripples—the creases disappeared and the wrinkles vanished as if by magic, and the conviction forced itself upon you that despite its sizeableness, nature had meant that mouth for kissing. When a woman has come down to the business of keeping her immortal soul in touch with her body on Japanese food and less than nothing a month, you can readily fancy that her physical charms are apt to take flight with the rest of her impedimenta.

"By the time I had made this exhaustive diagnosis Rossy had got her to talk—mostly for my benefit, he said. At first it was a mere recital of what I knew already. She had been young and foolish once on a time like more of us, and her especial foolishness had consisted in coming a cropper and bolting with a Japanese merchant, on the understanding that he was to marry her when they got to Dai-Nippon. However on landing *akindo san* owned up to being already more than sufficiently "wived;" he had already one lawfully wedded spouse, besides a female subaltern or two to aid her in "manning" or rather in "womanning" the mènage. There was a quandary!

'"What was a poor girl to do?" asked Mademoiselle Louise plaintively and piteously. "One must live somehow."

Of course in a way she was right. Lucretias are all very well in Roman History and story-books but they are not so very plentiful in real life. They are grand women,—fit to be the mothers of heroes, but we don't raise many of them now a days, more's the pity.

"However, Mademoiselle did not knuckle down with any considerable amount of grace to a junior command in the household of Okura Sama. She didn't like raw fish, she didn't like daikon, she didn't like having to put her head on the tatami in honour of her lord and master, and she hated to play something even lower than second fiddle, so one day she arose in her wrath, and addressed Okura San in forcible language and with the back-edge of a Japanese sword. Okura Sama appeared to understand the hint and henceforth left her severely alone. In a few weeks he even went so far as to beseech her in the name of the 8,000,000 Gods of Dai-Nippon, to honorably withdraw herself from his humble dwelling and to restore peace to his insignificant household. Acting on the advice of an old and fatherly compatriot of her own, she complied with his request for a consideration. Then pater-familias tried to work a little scheme of his own at her expense, and succeeded. When he had got what he wanted he advised her to go into a convent. Then when she remonstrated against this proposal in dignified but forcible language, by a piece of brilliant diplomacy he shunted her on to some one else—a high and mighty but under paid official in the consular service of a certain mighty nation. But I'm going to skip all this and the next few scenes in the drama.

Let it suffice to say that the girl tried and tried again to get out of it and back to Paris, but do all she could, as our Japanese friends put it classically, it "was no go." You see it was for the supposed interest of certain parties that she should stay. And the sum of the whole matter was that at the moment of our appearing on the scene, she was badly in debt, with her credit all gone, the New Year approaching and a yelping rabble of petty merchants now bowing and scraping, now snarling and growling for the money which she had not.

"In three more days they will turn me into the street," she said, "and from here to the Yoshiwara over yonder is a very easy passage. How much do you fancy I should fetch? A foreign woman will be a variety, quite a *mezurashii-mono*. The Japanese I'm told have paid as much as $1,000 for a rabbit; surely I am worth as much as bunny!"

Marah itself would have been sweetness compared to the intonation of this deliverance.

'"I have been *trompé, trompé*, by everybody. There was Dr. Schmoller Schmidt, a Professor in the Foreign Language School; surely you would expect a Professor to be *un homme honorable*; he has deceived me worse than any."

"At this I pricked up my ears! I thought of that voyage from Hongkong, and of Mephistopheles' *ubersinnlicher sinnlicher Freier*, once again. Could there be anything in it after all? I listened to this chapter of her story, and I found there was a lot.

The acquaintance began in the Kōenchi, or public garden. A friend of Mademoiselle Louise had become infected with a craze for the study of green stuff, and Louise had gone out with her to help in prospecting for specimens thereof. Among them they ran across Dr. Ephraim Schmoller Schmidt, although he turned out to be less verdant than he seemed at first blush. For he really could blush like a mawkish school-girl in the shivers of her first love affair, when it suited his book to do so. And it happened to be handy for him to indulge in the performance at that moment, and accordingly he blushed all over, a ruddy ruby red. It became him very well, Mademoiselle assured us,—he looked for all the world like a little cherub caught in *dishabille* without his wings, and very much put out because he had forgot them. On that occasion he had proved punctiliously polite, and *devoué*, very much *devoué*, indeed. His gallantry was apiece with that of Raleigh dabbing his best go-to-meeting cloak in the mud for the honour and glory and comfort and good-will of Queen Bess, or eke of old Dizzy putting a Cashmere wrap round the Imperial albeit sizeable shoulders of Her Gracious, and murmuring wheedling nothings in her ears all the time. Dr. Schmidt could be sentimental and overpoweringly complimentary to females in seven or eight different languages, without counting in any of his 40,000 chops.

"So Louise was mildly pleased—not carried off her feet though by any means—by his style to begin with. She was very careful to make the above distinction. "Fall in love? No! Certainly not; that nonsense did not pay. Even then she had been over-much fooled by men. But that she liked him—Mais! Oui; certainement. And as for warmer feelings afterwards? C'était possible."

"As she said this she shrugged her shoulders the tiniest little bit, and stared dreamily into vacancy, or the bottom of Rossy's hat which lay tilted on its side on the far-end of the table.

"Dr. Schmidt had found out her address and had called. She had found her reading Alfred De Muset and he at once rushed upon her and metaphorically speaking embraced her as a sympathetic soul. For he also was a poet. "Moi aussi mademoiselle. Je vous l'assure, je suis poète!"

"I thought the declaration sounded even better in French than it did in gutteral German. On board the ocean-tramp it had been "Ich bin dichter." But somehow—possibly because it was messed up with Chinese chops on that occasion—the romance of the previous assertion of Pierian inspiration was very much *manquè* compared with the glamour of the episode as related by Mademoiselle Louise. But Chinese "chops," and De Musset! and the vast gulf fixed there between! And then—well he could have had no ulterior designs to work upon me—an old tough leather-skinned case-hardened lump of male journalistic iniquity, and as the sequel showed in the case of Louise, he meant the metaphorical embrace to become something more substantial and satisfying than a more empty and stilted *façon de parler*. Kindred souls and Platonic affection are no doubt very fine as garnishings, but after all they only serve for desert. Man cannot live by them alone, any more than he can depend upon the baker exclusively for his support. They are just like the *saké* that preludes a Japanese *gochisō*, or the cocktail you take at the bar to put an edge on before you enter the dining-room at the Club.

"And that was just how Dr. Ephraim Schmoller Schmidt meant to engineer the business, and just the way he succeeded in running it. He said he was very lonely living the bachelor life he did. Mademoiselle Louise said she was very sorry to hear it, and the Doctor then invited her up to lunch with him. She accepted the invitation and although by this time she had learned from his servants—what is there you cannot learn about a man from his servants in this country?—that he was far and away the most *ketchimbo* foreign danna-san in Osaka, she found the luncheon a gorgeous affair. She confessed to doing justice to it while the Doctor also tendered it all due respect. It had a most expansive effect upon him. He began to talk in verse—in verse with a measure that was erratic and a flavour that was most pronouncedly erotic. It was a trifle embarrassing—especially so when he went on to inform his guest in a hexameter line with a halting caudal appendage that she was the very image of the girl to whom he had been engaged! Now although the bloom may have been all rubbed of the peach ages ago, no woman likes to be addressed in this style. A mere reflected passion is hardly a complimentary thing, even allowing that the original was not a cheap Brummagen concern with maudlin mawkishness as the only conspicuous feature about it. And to be honoured with a declaration that one is the cause of a dead-and-alive stirring among the drossy cinders of the calcined brass of an extinct hysterical calf-love,—well, it makes a woman's cheeks flush with the sense of Power!

"Here she broke into a little scornful laugh, and then trilled out a chanzonette quivering with sarcasm for our benefit. I wished Dr. S. had being listening.

"One can imagine what a fine theme this would have been for Euripides! The vengeance of Aphrodite far transcending Juno's pale and spiteful pin-pricks on account of *spretae injuria formae* would have been a tragedy out-tragedying the peripeteia of the *Bacchae!* But when Aphrodite is going around with an empty stomach, as she occasionally has to in these days of a glutted labour market, she must think of other

Digitized by Google

considerations before mounting the broom-stick of a witch's whirlwind of fury and revenge. She has perforce to bite her lips and knuckle down to tackling the purely mundane and low-thoughted problem of making ends meet,—not an easy one by any means when the *res augustae domi* have shrunk so badly and lost so much of their elasticity as they had with Louise. So although she didn't like the compliment, she laughed with the wrong side of her face and pocketed the slight on the off-chance that she would be able to fill the vacuum with something more tangible and substantial by and by.

"Possibly it was only his own patent poetic way of conducting operations; yet Mademoiselle confessed to finding herself in a state of hot and deadly siege before she could very well say how it was done. The Doctor had used the old love simply as a cover to his approaches. When he fancied he had finished his trenches and got all his batteries in position, he threw off the mask and opened fire with vigour. He began by saying some things about the old flame that were not over-complimentary, and some things about the new one that were. He addressed the latter in language that bore a close family resemblance to the warmest tinted portions of the song of Solomon. He went on his knees *et fit un declaration d'amour*. It was slightly embarrassing, Mademoiselle admitted, because in the first place his inexpressibles were so tight about the knees that the position looked uncomfortable, and perhaps a trifle ridiculous, and in the second place because she was almost beginning to believe in his sincerity. In Japanese phrase she was "puzzled."

"Eh, Bien! Puis alors!"——

"There she shrugged her shoulders again, and threw out her left-hand sideways, palm upwards with her cigarette between the fore and middle fingers, and raised her eyebrows in a way that conveyed as much as an ordinary half-dozen chapters in the regulation three-volume novel.

"Of course, when a woman hesitates, she is lost. Only Louise asked for something definite and tangible. The Doctor delicately insinuated that he was poor but honest, and went on to say that he had expectations. In that he was not at all singular; most folks have, the victims of the Manila gamble abomination inclusive. The Doctor's though had so many probabilities in their favour that they were in his own sanguine opinion within an arm's length of certainty. One of his compatriots was on the point of returning to Vaterland, and the plot was to jockey Mr. Schmidt into his vacant 300 *yen per mensen* billet. "And then ——."

"There the Doctor stopped with a rising intonation, gazed ceiling-wards with the seraphic look of a fuddled cherub, opened his arms to the fullest extent and embraced—the sofa. Mademoiselle apologetically represented that his impetuousity was a trifle disconcerting, and coyly asked time to consider the matter. To induce her to take that particular branch of the forked roads at whose parting she now stood which led to his bungalow, he redoubled his protestations, and raised the bidding considerably.

"Well—que-voulez-vous? I saw him several times but I passed only one night in his house." Then it would seem the sweeping molten stream of his lava-like passion began to flag in its career, and to cool, and in a few days it was as cold and petrified as a combination of reason and Chinese "chops" could make it. Meanwhile, Mademoiselle was faring sumptuously on *daikon* and *sashimi* and the elements of starvation, with a gnawing hunger by way of a cheap and unfailing relish. When she allowed this fact to filter through the P.S. of four pages of a billet-doux copied from the Universal Letter-writer, the amorous savant mounted the high-stepping steed of sentimentality and executed a series of high-falutin' curvets for her especial benefit and edification.

"'In such matters pecuniary considerations were not to be mentioned. Only one kind of women took money for matters of this kind, and he wouldn't insult her ears by mentioning the epithet by which they were designated. Therefore he had not outraged her by offering her anything of the sort, nor would he ever think for a moment of doing so."

"He furthermore contrived to clench the matter by adding the information that since he had come to Japan he had been very much embarrassed by the gifts ladies *would* persist in thrusting upon him. A certain Japanese Countess with whom he had been indiscreet had presented him with the gold studs and sleeve links he was wearing at the moment.

"'He actually shot out his cuffs and asked me it I did not consider them really *trés chic*," she said slowly with withering scorn.

"Then he had also had an affair with a German lady, and had been in terror lest the *mari* should discover it and challenge him to mortal combat. *She* also had persisted in making donations.

"At this point Mademoiselle got up and gave him something too. It was a piece of her mind and his *congé* coupled with a not unforcible hint that she did not want to see anything more of him or of his gold sleeve-links either. Also that if he did come to her house again, he would get a taste of her riding-whip.

"However, this little breeze had the effect of fanning the infinitesmal sparks of his moribund passion into a vehement spasmodic crackling thorn-sort of lambent flame. He vowed and protested and poured forth his devotion in French worthy of Corneille, and in hysterical sputters and bloches of Tsuzi's so-called "Superior Writing-Ink."

"'If you don't believe here are his letters," she said, handing Rossy a packet of gilt-edged envelopes.

"'See for yourself! Je vous les donné."

"They were a little bit comical, but of course to all cold blooded outsiders and onlookers love epistles are apt to sound ridiculous. But they had a distinguishing feature that you don't usually find in the ordinary correspondence of folks bent on making asses of themselves in this particular fashion. I don't know whether you would call them juvenile, or senile, or anile, they had ends of all three qualities sticking out of them. But in the midst of the streaky torrent of amorous Brummagen rodomontade, you could always discern the almighty main chance bobbing up to the surface. There were reasons innumerable for not "coming down with the dust," and also innumerable promises that it would be forthcoming unfailingly. But the difficulties of the present situation were as lions in the path. In the first place he found his salary was scarcely sufficient for one, let alone two. In the next place, he had left Germany without doing his military service, and that was a debt that had to be reckoned with some day—very soon perhaps. Altogether it was not his fault that he did not take steps to put her in a better position. But he loved her, loved her, loved her!

"'La nuit dernière était comme ses sœurs—presque sans sommeil. Ton image flottait continuellement devant mes yeux et tes baisers brûlaient encore sur mes lèvres. Surtout le dernier baiser—diable, il a glacé tout mon sang pour un instant, pour me jèter alors au feu infernel! Mais, patience, tu me payeras pour cela on je me fais trappiste! Chacun mangera la soupe qu'il a préparée.

Ton tout dévoué,

EPHRAIM S. S.

The letters, in their own peculiar way, were quite as amusing as anything Prosper Mérrimée ever wrote. But the effect was produced in a different way. But of course that's neither here nor there.

All this time Louise was sinking deeper and deeper in the slough of despond and pecuniary difficulties. She had, by her showing, no one to befriend her —, not a soul. She became sick in body and sicker still in mind. So one day after perusing another flowery composition in which much was said about devotion but nothing whatsoever about dollars, she took advantage of the wind-up of the production and replied. Dr. S. had concluded, "Si tu trouves le temps de penser à moi quelques instants ou même de m' ecrire peu de mots, tu me rendras bien heureux."

Ton tout dévoué,

EPHRAIM S. S.

She did write a few words explaining her position, and so far from rendering the Doctor happy she succeeded in making him very miserable. At least one would suppose so to go by the tenor of his reply. Here it is.

June 24th, 1885.

Ma chère amie,

Je viens de lire ton lettre et te remercie beaucoup. Je me trouve assez bien, malgré cet horrible temps. Encore deux semaines et nos cours sont finis. Mais il est possible que non séjour en Japon soit aussi bientôt fini; j'ai été a Kobe à causes de mes affaires militaires, et on n'a pas encore definitivement fixe' si je dois partir au commencement d'aout on si je peux rester. J'espère qu'on me donne mon congé.

Quant à ta demande financielle je regrette que je n'ai pas reçu mon salaire. Je pense que lundi prochain j'aurai mon argent, aussitôt que je l'ai je ferai mon compte. Un monsieur que tu connais m'a aussi demandé une somme, et il sera difficile de la lui refuser, comme autrefois il a eté très-aimable et généreux. En cas que je suis contreint de partir j'aurais besoin de chaque sen que je possede. J'avais beaucoup à faire les derniers jours, mais la semaine prochaine je viendrai te voir.

Il m'est un plaisir de l'envoyer, par ton Kuruma-maya une demi-douzaine de biere. Bon appetit!

Mille choses agréables, ton dévoué.

EPHRAIM S. S.

"And such was the lame and impotent conclusion of this precious piece of transcendental gallantry! Faust contrives to shake off Marguerite with the gift of half a-dozen of beer, on which he does not even pay the carriage!

"'So this was the end of it?" asked Rossignol.

"'Yes, he mistook me for a beer-swilling Berliner;" she replied with all the bitterness inherited from '70 vibrating in the words.

"'Why didn't you send this precious present back?" inquired Rossy with a humorous twinkle flickering in his eyes.

"'Send it back!" she said in rising tones. "No, Certainly not! It is the only thing I have got out of him! But," she went on quickly and caustically, "I did write asking if he wished me to return the empty bottles."

* * * * * *

"But Faust found to his cost that there was an epilogue to the comedy. Rossy, true to his plighted word, turned up on the 1st of January with a handful of dollar notes and kicked out the cringing creditors neck and crop when they came meaning mischief. He talks Japanese beautifully under any circumstances, but it was a treat to hear him orating in Nihongo on that occasion.

"Then he started a subscription list to get Mademoiselle out of the country. Most of the boys anted up their four or five dollars, and in a few days there was enough put together to get her a ticket to Marseilles, with something over besides to give her a fresh start when she got there. "See there, what do you think of that?" he asked handing over a subscription sheet.

"Three hundred and seventy-seven *yen*," I remarked, "that is really very decent. I notice though that one good Samaritan is responsible for a big-gish part of it. Who is this that signs himself 'A friend—150 *yen*?'"

Webster did not answer at once. He stroked his chin and cocking one eye significantly, he looked at me in a provokingly quizzical manner.

"Yes," he said after a pause during which light began to dawn upon me. "I see you've got it. It was the German Consul that worked the oracle for us there, and he worked it to some purpose. Dr. Ephraim Schmoller Schmidt *has* got his 300 dollar billet in the *Zohei-kyoku*, but he pocketed no more than the half of his first month's screw. "And the girl? I queried as I got up to catch my train.

"The girl? answered Webster sweeping his long legs off the table and starting to his feet. "Well, I guess by this time she is taking in the beauties of the seascape and landscape of the Inland Sea, somewhere on the other side of Akashi Strait. But must you really be off? Well, well, by-bye, till next time, old man. Here comes that last revise."

---

## *BRITISH CONSULAR TRADE REPORT FOR SAIGON FOR 1890.*

Consul TREMLETT to the Marquis of SALISBURY.

Saigon, February 10th, 1891.

MY LORD,—I have the honour to enclose my Report upon the Trade, Commerce, and Navigation of Saigon for the year 1890.

I have, &c.

(Signed) CHAS. F. TREMLETT.

### REPORT BY CONSUL TREMLETT ON THE TRADE, COMMERCE, AND NAVIGATION OF SAIGON AND INDO CHINA FOR 1890.

#### TONKIN.

This province has not been prominently brought before the public. The Governor-General has spent the greater part of his time there. Affairs are still somewhat unsettled, but accounts are conflicting, and it may be well to await further development before reporting.

#### ANNAM.

There is nothing particular to remark.

#### CAMBODIA.

This country has remained without any noticeable disturbance.

#### COCHIN-CHINA.

The following table shows that the export of rice amounted to 8,517,000 piculs (equal to about 506,900 tons), being 226,900 tons in excess of the export of the previous year. The average price, first cost, in gunnies for 20 per cent. "cargo," may be stated as equal to 4*s.* 8*d.* per cwt.

Total values are as under:—

| Rice. | Piculs. | Per Cwt. s. d. | £. |
|---|---|---|---|
| Cargo | 5,312,000 | 4 8 | 1,036,000 |
| White | 1,471,000 | 6 0 | 368,900 |
| Paddy | 1,734,000 | 4 4 | 314,000 |
| Total | 8,517,000 | | 1,718,900 |

Digitized by Google

STATEMENT OF RICE EXPORTS FOR 1890.

| Countries. | Ports. | Piculs. | Total. |
|---|---|---|---|
| China | Hongkong | 5,379,300 | — |
| | Swatow | 97,900 | — |
| | Amoy | 20,500 | 5,497,700 |
| Japan | Hyogo / Yokohama | — | 796,100 |
| Tonkin | Haiphong | — | 64,000 |
| Philippines | Manila | 688,100 | — |
| | Iloilo | 402,000 | — |
| | Cebu | 62,800 | 1,152,900 |
| Straits | Singapore | — | 434,500 |
| Europe | F. O. | — | 581,800 |
| Grand total | | — | 8,517,000 |

The crop, as will have been seen, was a full average one, and prices ruled high for the greater part of the year. For the first time for many seasons trade was resumed with Japan, where as is well known, crops were short. Shipments to Europe, too, were not insignificant.

The crop now harvesting has all along been well spoken of, in spite of the fact that October and November passed entirely without rain; but now the admission must be made that this drought caused considerable damage, and moderate estimates put the crop of 1891 at 25 per cent. under that of last year.

OTHER EXPORTS.

| Description. | | Quantity. |
|---|---|---|
| Fish | Piculs | 116,912 |
| Isinglass | Piculs | 1,143 |
| Hides | Piculs | 6,421 |
| Copra | Piculs | 5,207 |
| Cotton | Piculs | 18,973 |
| Paper | Piculs | 5,379 |

|---|---|---|---|
| French | 1,758 | Russians (?) | 16 |
| English (?) | 35 | Indians | 665 |
| German | 20 | Chinese | 7,351 |
| Austrians | 5 | Annamites | 5,990 |
| Spaniards (?) | 3 | Cambodies | 13 |
| Swiss (?) | 2 | Japanese | 22 |
| Portuguese (?) | 3 | Taguls | 37 |
| Italians | 9 | Malays (?) | 282 |
| Greeks | 2 | | |

Total.....16,213

But I question very much the accuracy of these published statistics. There are but four English residents—European, at any rate.

Hospital charges are now, for foreign officers, 16 fr. 89 c.; for foreign seamen, 8 fr. 39 c.

The efforts to suppress smuggling, however praiseworthy the intention may be, are more unnecessarily vexatious than ever, and in some cases, or rather in the cases of some steamers, are based upon less than frivolous pretexts as regards searching for opium.

The matter of a loan is still in abeyance.

## *THE RIOTS IN CHINA.*

We extract from the *N. C. Daily News* of the 12th inst. accounts of the attacks on foreigners at Kiukiang and Wusueh of which, by Admiral Belknap's kindness, we were enabled to publish telegraphic intelligence. The descriptions are in the form of letters from Correspondents, both dated 8th inst:—

KIUKIANG.

On Sunday evening the long-expected attempt came off. As usual they made the "children" the occasion of the outbreak. The Romanist orphanage within the city was the scene of the first trouble. A great crowd collected around the number of children who were being sent into the country and to the Hospital in the Concession. The crowd increased and became noisy and did a little damage by tearing up shrubbery and breaking windows, but in five minutes, and before time was allowed for them to get really started, troops came in hot haste from three camps and immediately took possession. Guards were also thrown in and around the Mission property of the Methodist Episcopal Church. Soon after a great mob collected in the Concession. The ladies and children were quietly and quickly removed to the Consulate and Custom House, and arms handed out to the residents, some 30 in number. In the meantime word was sent to the gunboats, three being fortunately in harbour, and armed boatloads of men were sent to the jetties ready to be landed at a second's notice. The mob was kept quiet by the presence of the foreigners in the back streets and on the Bund. On the back street the mob was the thickest. There one of the students harangued the crowd and urged them to go on and kill foreigners; said he, "What are we afraid of? We are many, the foreigners only few, and we can overpower them." With this they made a rush at the three foreigners stationed here, but Mr. Millar, chief of the Police, knocked the student down and when he rose to renew the conflict Mr. Millar's revolver was pointed at his head and death threatened if they came on again. They prudently declined. But the mob increased; soon eight or ten residents formed line and charged with the bayonet and drove thousands before them and out of the settlement. In the mean time the Taotai with a great following of troops poured in, and every chance of the mob destroying property or taking life was gone. The Chinese soldiers were requested to clear the Concession and close the barrier: they made some ineffectual attempts, so the residents took the work in hand and drove the crowd from all the streets at the point of the bayonet, and closed the barrier. Pickets of Chinese soldiers were posted everywhere and residents were under arms all night. To-day the Concession was crowded and Chinese roamed all about but dared not break out, armed foreigners being everywhere. As an instance of the value of the native soldiers in a conflict with the people, one of the "braves" started to move on a crowd, but they would not be moved and finally the soldier pushed one of them who turned round and cursed him, whereat the soldier made a polite bow. Other braves ran up but did not seem to do much, and it was not till the residents appeared with fixed bayonets that there was any stampede. All through the day matters have been thus. Troops have erected tents everywhere and are camping. To-night again at 7 o'clock the foreigners have had to clear the Concession at the point of the bayonet and guards are stationed with ball ammunition. Nothing can take place to-night. All foreigners from the city were removed into the Concession this afternoon, and are in safety. People are getting a little wearied out with this much watching and patrolling; it will have to stop some way soon. There is no danger here, we are strong, well armed, and prepared; the residents with the help of the sailors can drive off ten thousand. The excitement will doubtless last some time yet, but everything is well in hand. The great popular festival of the Dragon Lanterns begins on Thursday; there may be a little trouble then, and again during the military examinations which begin in a few days, but the officials are all alarmed and are doing their very best. Of course the Chinese are talking a good deal, but they can't do anything. They had better try, and they will learn a sharp lesson. Sailors and foreigners mean business. The *Inconstant* is drawn up between the hulks close in shore and can rake the Bund; armed crews are ready to land two or three minutes after the signal from shore has been given. Everything is perfectly quiet at this time of writing.

WUSUEH.

The wave of riot has rolled along the Yangtze until it has reached our province. Thirty miles above Kiukiang is an important trading town called Wusueh, at which the steamers stop in midstream for passengers. Here the Wesleyan Mission has been peaceably established for nearly twenty years, so peaceably that one is never called "Foreign devil" on the streets, ladies go out without foreign escort, often even for thirty miles inland to Kuangchi Hsien, where also a married missionary lives. The hills immediately opposite Wusueh have been selected for the mission sanatorium. In Wusueh itself, there are two mission houses in the same compound. On Friday evening last, June 5th, ladies only occupied the premises, both ill, together with their children and another lady, a visitor, the husbands being away at different stations. An invalid was occupying the Bungalow, and Mr. Argent, who arrived from England six months ago and had been taking care of the convalescent, came down to Wusueh to catch a steamer for Hankow. As he was obliged to wait for a day or two, the steamers being delayed, he spent the time at the rooms of Mr. Green, the resident officer of the Imperial Customs. Late in the afternoon four men took another to the *yamên*, declaring that they had found him coming into Wusueh with two baskets containing four young babies. These he professed to have collected around Kuangchi for the Roman Catholic Foundling Home at Kiukiang, and he asserted that eight other men were similarly occupied in the Hsien. The mandarin insisted on these four men affirming their names to the information,—which they declined, and the case was dismissed. Babies carried in baskets away from their mothers for many miles all through a boiling hot day would naturally be little likely to survive a farther steamer journey. One cannot but guess that the whole was a plot for the express purpose of rousing the mob. At any rate, plot or no, the plan succeeded. The crowd set on the man and in the scuffle smothered one of the bodies. Instantly the cry was raised, "They will take the baby to the Wesleyan Mission to make medicine of."

A rush was made for the Mission compound. The ladies hearing the scurry thought first of a fire, then of a theft, but almost instantly stones began to crash in their windows and on their attempting to find a safer place it was discovered that the house was on fire—probably through the upsetting of lamps by the shower of stones. They collected the children and had just taken shelter in a latticed toolhouse in the garden when all the doors were burst in and the rabble instead of going to the house, catching sight of their white dresses, rushed at them with stones and bamboos. The ladies driven out rushed down a passage and out at a back door, where the natives did not attempt to stop them. Probably the sight of the flaming house induced their pursuers to return after loot. Reaching the Mission chapel they took refuge there for a short while but a howling mob was on them striking, kicking, stoning. All got separated, one baby in the arms of a catechist was the butt for blows which he fended off as long as possible; its life was then saved by his tossing it to a native woman, after which it was lost for an hour until its amah claimed it from the strange motherly arms. The other children were saved in the houses of native Christians. One lady had a heavy blow which broke her head open, and she fell for an instant bruising her eye, but instantly recovered herself and rushed on; the others were also badly bruised, kicked, and struck. First two of them and then another by herself attempted to get refuge in the *yamên* of the Ma Ko Sze, but on each occasion the doors were shut in their faces, and they were driven back into the crowd. In pleasant contrast to this was the action of the Lung Ping Sze who urged the crowd to stop their work, offering his own person and *yamên* for vicarious violence. The crowd accepted the challenge, burnt his *yamên* and beat him heavily, but con-

Digitized by Google

tinued their hunt for the foreigners. Finally two ladies and one child found their way down a quiet lane to a mat hut, whose occupants on the promise of reward hid them in the back of the hut, calmly continuing smoking and chatting at the doors. Messengers were sent to the Christians of their whereabouts, and first the third lady was brought to join them; presently runners were sent who conducted them to the *yamén* of the deputy-prefect. This man had taken no notice of three distinct appeals for assistance at the beginning of the riot, but now did his best to make the refugees comfortable. They surely needed it, for some were in mere night clothes; but the speedy restoration of the equally thinly clad children removed the worst horror from the mothers' minds. Meanwhile Messrs. Argent and Green saw the glare and, fearing the fire was near the mission, came running at full speed to help. They were met by the servants who told them that the ladies were gone, but couldn't make them understand that there was a riot and that it would be dangerous to go on. Mr. Argent was at once set on by a number of men; he took refuge in a leather shop close to the chapel where his assailants continued to attack. The shopman bade them not to kill him there, but take him outside; they instantly dragged him out and a blow from a coolie's bamboo split his head open, the blood spurting on to his servant who vainly tried to save him. They were mad with rage, set on him, pounded the head on the stones and mauled the body badly. Happily, we may feel sure he felt none of it all. Mr. Green ran away and took refuge in the midst of a pond where he kept them at bay for an hour or more. Then he got to land and was killed near the *yamén* whither he was running for refuge. In their rage they treated his body worse even than Mr. Argent's the face being unrecognisable.

Next morning early the *Tehhsing* came up river and Captain Cain received the refugees; with the greatest kindness he anchored for some hours until a message could be sent up to the bungalow and Mr. Fortune, who was ill there, could return. Naturally great anxiety was felt about the safety of the missionaries inland, especially of those in Kuangchi itself whence the rumour was supposed to have come. Happily, as we now know, the Kuangchi family are safe guarded in their own house to be escorted to the foreign gunboat on its arrival, and the missionaries from Kichow and Huangszekang have also reached Hankow in safety. The only one yet not heard of is the Rev. F. Boden of Wusueh, but his country journey is not likely to have led him into serious risk. Captain Cain met the downcoming *Fuhwo* and sent messages to Kiukiang; the U.S.S. gunboat *Palos* was at once sent up to Wusueh and telegrams sent to Hankow. H.B.M. Consul, Mr. Gardner, at once communicated with the authorities. There is no doubt of the determination of the Viceroy, for immediately rapid couriers were sent to the other places within a radius of a hundred and fifty miles where foreigners are settled, to warn the local officials and to insist on prompt repressive measures. Of course Hankow and Wuchang were full of the usual style of rumours, but stringent orders were instantly sent to the commanders of police and troops on both banks of the river, and the claim of security already confidently advanced on behalf of the capital of Hupeh may be cheerily maintained.

It is earnestly to be hoped that the authorities will press the punishment of this causeless and brutal riot rapidly. The mob were evidently utterly mad and beyond control. It is happy that the two missionaries were not at home. When one of the ladies was in the clutches of the mob, some interfered and said, "Don't kill her, only beat her and make her tell where her husband is, we'll kill the men." There's no doubt that the crowd believe the story of the children—as nine-tenths of the Chinese in these three cities do to-day. But the sternest punishment will not be too much for the wicked men who took advantage of the folly of the ignorant, nor for the officials who refused help and shut doors in the face of defenceless women. If ever there was a call for stern, unbending justice it is here, when the brutal beating of ladies and children, and the killing of two young Englishmen in a town hitherto entirely and continuously friendly, call aloud for the strongest, sharpest lessons.

When the *Palos* arrived at Kiukiang on the 6th, Captain Marthon was informed of the Wusueh massacre, and proceeded at once, arriving at 6 p.m. All was quiet then. Captain Marthon went ashore with an escort of Chinese men-of-war sailors, and proceeded a mile and a half into the city. He came across the body of Mr. Argent where it had fallen. It was lying on its back in the court-yard of the mission, dressed and covered over with old mats. He found the church and school gutted, and all the furniture either gone or destroyed. On proceeding to the dwelling-house he found the body of Mr. Green lying in the middle of the street and covered with mats and lumber. One dwelling house was completely destroyed by fire and another in the rear entirely gutted of moveables and fixtures. On Monday morning Captain Marthon and some of his officers, at the request of the mandarin, attended the inquest on the bodies, and afterwards saw them washed, dressed, and placed in Chinese coffins to be sent to Hankow by the first steamer.

### WUSIEH.

Telegrams were received here (Shanghai) on Monday night and yesterday morning (10th) to the effect that a mob had attacked and destroyed the Jesuit Mission at Wusieh near the Tahu. No lives were lost. The rioters were probably the same people who attacked the R. C. Mission at Tanyang on the 2nd instant. Tanyang is between Chinkiang and Wusieh. The latter is an important town on the Grand Canal, and is the principal scene of the operations for the purchase of cocoons for the silk filatures in Shanghai. A Shanghai resident, who was at Wusieh a fortnight ago, had a conversation with two of the Fathers and visited the school, in which about forty boys were at work. The Fathers were told of the outbreak at Nanking, but expressed no fears on their own account, Wusieh being then perfectly quiet. The church is a very handsome one for China, and there are some 4,000 converts in the city and neighbourhood.

A telegram received last evening mentioned that all was quiet at Wusieh, and there does not appear to be any ground for the rumour that a large part of the town has been burnt.

We have received the following letter on this painful subject:—

To the Editor of the "North-China Daily News."

Sir,—We have received telegrams informing us of a new outbreak at Wusieh. As far as can be understood from these telegrams, on the afternoon of June 8th a band of miscreants reduced the church, dwelling house, and schools to ashes, but without killing anyone.

Wusieh is on the Grand Canal, at an equal distance from Soochow and Changchow. It is the centre of a section of our Mission which is attended to by six Fathers, and which has over 10,000 Christians and 60 chapels. We had there our largest church, with a boy's school which counted often 100 pupils, and a girls' school still more numerously attended.

One of the telegrams says that of all this nothing remains standing.

It seems very much as if these deeds were committed by men obeying a word of command in an organised scheme—by a band which has travelled from Chinkiang to Tanyang along the Grand Canal, and next to Wusieh by the same channel. These evil-doers have evidently orders to do what they have done—destroy so many schools without taking lives.

What can be their object? Where will they appear next?

You are at liberty to publish this sad news in your columns. We shall soon, no doubt, have full particulars.

I am, etc.,
Aug. M. Colombel, S.J.
9th June.

## *CRICKET.*

### Y.C. AND A.C. V. VISITORS AND FLEET.

This match came off on Saturday, and resulted in favour of the Club by 88 runs. The Visitors went in first, and runs were put on pretty freely by the first half of the team, but there was a great falling off towards the end, the last five men scoring nothing. Walford, the two Edwards, and Frith bowled, the latter being credited with four wickets. The Club played against the bowling of nearly the whole of the other side, and had their score assisted by 20 extras. Frith was in great form, piling up nearly half the score and carring out his bat, Walford adding 34, and Dickenson 27, and Bevan took 5 wickets and bowled 6 maiden overs. Following are the scores:—

| Visitors and Fleet. | | Y.C. and A.C. | |
|---|---|---|---|
| Mr. Eyre, b. W. Edwards | 7 | Mr. Crawford, c. Eyre, b. Elliott | 18 |
| Mr. Bevan, c. Crawford, b. Walford | 30 | Mr. W. Edwards, c. Bevan, b. Crompton | 3 |
| Lieut. Clinton-Baker, b. E. Edwards | 22 | Mr. Frith, not out | 89 |
| Mr. Herbert, c. Crawford, b. Frith | 25 | Mr. Watson, b. Bevan | 5 |
| Mr. Leigh, run out | 8 | Mr. Duff, b. Bevan | 0 |
| Captain Gamble, not out | 15 | Mr. E. Edwards, c. and b. Bevan | 1 |
| Mr. Crompton, b. Edwards | 0 | Mr. Fenton, c. Eyre, b. Bevan | 0 |

London, June 2nd.

The action for libel brought by Colonel Gordon-Cumming is now being tried by Lord Chief Justice Coleridge: the plaintiff in testifying solemnly denied that there was any attempt at cheating on his part.

London, June 4th.

In his evidence in the suit for libel now being tried, Colonel Gordon-Cumming admitted that he did nothing to clear himself until the scandal was made public. H.R.H. the Prince of Wales testified to the friendship existing between himself and Colonel Gordon-Cumming, and stated that he saw nothing of the cheating referred to, but was obliged to believe the unanimous statement of others that the plaintiff had been detected cheating.

[From the Manila "Comercio."]

Madrid, May 22nd.

In the Chambers the commercial interest has opposed the idea of prolonging the privileges of the Bank of Spain, also the unlimited issue of paper money.

At a meeting of the Associated Chambers of Commerce at Madrid it was unanimously resolved to petition for the suppression of the duties payable in the ports of Spain on Colonial products. It was also proposed that the Customs regulations in the Philippines should be reformed on the basis recommended by the Manila Chamber of Commerce.

### REPORTS.

The British steamer *China*, Captain Seabury, reports:—Left Hongkong the 11th June; had strong N.E. winds and rough sea through Formosa Channel; fresh E.S.E. winds across Eastern Sea; from Yokohama to Oshima, heavy gale with thick rainy weather; Oshima to Rock Island, fresh easterly winds and fogs; Rock Island to port, rain and thick weather. Passage, 5 days, 3 hours, and 55 minutes.

The Japanese steamer *Miike Maru*, Captain MacMillan, reports:—Left Honolulu the 3rd June at 0.30 p.m.; had light variable winds and fine weather; crossed the meridian on the 7th in lat. 25° N.; 13th and 14th had fresh S.W. gale with high sea and fierce squalls; thence to port moderate to fresh N.E. winds and rainy weather. Arrived at Yokohama the 17th June at 2 p.m.

The British steamer *Parthia*, Captain Panton, reports:—Left Vancouver the 3rd June at 3.40 p.m. Arrived at Victoria at 9.15 p.m. and left at 10 p.m.; had moderate N.E. winds and fine; 4th and 5th fresh S.W. winds and heavy head sea; 6th and 7th moderate S.E. winds and fine; 8th and 9th light winds and foggy; 10th moderate N.N.E. winds and fine; 12th crossed meridian in latitude 49° N., fresh N.N.W. winds with passing fog banks; 13th and 14th light S. and S.W. winds and foggy; 15th light northerly winds and fine weather; 16th Kinkasan abeam at 7.35 p.m., strong S.E. winds and heavy rain to Inuboye-saki, abeam at 8 a.m. on the 17th; thence to Iwa Wada Point strong N.E. winds and foggy; from Iwa Wada to port strong northerly winds and fine. Time on voyage 13 days.

The German steamer *Pemptos*, Captain Johansen, reports:—Left Portland the 26th May and Victoria the 27th; had first part of the passage pleasant weather; middle part heavy weather and high sea; latter part moderate to fine weather. Arrived at Yokohama the 17th June about midnight.

The German steamer *General Werder*, Captain Blanke, reports:—Left Hongkong the *12th* June at 1.45 p.m.; had through Formosa Channel fair weather with moderate E.N.E. winds; thence to port changeable and hazy weather with passing showers of rain, and afterwards fair weather with light winds. Arrived at Yokohama the 18th June at 10.30 a.m.

The Japanese steamer *Kobe Maru*, Captain Haswell, reports:—Left Shanghai the 12th June at 2 p.m.; had weather dull and hazy with fresh S.E. winds and moderate head sea throughout the passage. Arrived at Nagasaki the 14th at 5.45 p.m. and left the 15th at 5 p.m.; had overcast cloudy weather with rain at times and moderate to light variable winds throughout the passage. Arrived at Shimonoseki the 16th at 5.15 a.m. and left at 10 a.m.; had fine clear weather with moderate N.E. winds. Arrived at Kobe the 17th at 5.20 a.m. and left the 18th at noon; had fine weather with light variable winds and smooth sea with hazy horizon; passed Oshima lighthouse at 7.43 p.m. on the 19th at 3.30 a.m., came on dense fog; at 4.30 a.m. fog cleared; passed Rock Island at 9.14 a.m., had light variable winds and smooth sea throughout the passage. Arrived at Yokohama at 3.15 p.m.

The American steamer *City of Peking*, Captain Searle, reports:—Left San Francisco the 2nd June at p.m.; crossed meridian 47° N. cold dark and gloomy weather with moderate westerly winds. Time, 16 days, 6 hours, and 26 minutes.

## *LATEST COMMERCIAL.*

### IMPORTS.

The tone of the market has been good, and in addition to the continuance of a satisfactory amount of business in Yarns and Shirtings, other articles seem to be coming into demand gradually, which may be taken as indicating some improvement in the general condition of trade, especially at this season when country folks are usually taken up with harvesting and rice planting. Prices have mostly remained very steady, and as regards Yarns, seem likely to be prevented from advancing by reason of the competition of the Japanese Mills, which has already killed the trade in Bombays and reduced by more than half the consumption of English Spinnings. Sales for the week consist of about 1,000 bales English Yarn, 15,000 pieces 9lb. Shirtings, 1,000 pieces 8¼lb., 1,000 pieces T.-Cloths, 3,000 pieces Silesians, 1,500 pieces Prints, 1,300 pieces Turkey Reds, 450 pieces Velvet, 1,500 pieces Italian Cloth, and 4,200 pieces Mousseline de Laine.

| Nos. 10/14, Bombay | — | |

### METALS.

Very quiet and there is practically nothing doing. Quotations are nominally unchanged. Holders ry to get some advance, but so far without much chance of success.

| | PER PICUL. | | |
|---|---|---|---|
| Flat Bars, ¼ inch | $2.80 | to | 2.90 |
| Flat Bars, ½ inch | 2.85 | to | 2.90 |
| Round and square up to ¾ inch | 2.80 | to | 2.90 |
| Nailrod, assorted | Nom. | | |
| Nailrod, small size | Nom. | | |
| Iron Plates, assorted | 2.90 | to | 3.05 |
| Sheet Iron | 3.10 | to | 3.40 |
| Galvanized Iron sheets | 6.20 | to | 6.40 |
| Wire Nails, assorted | 4.50 | to | 4.75 |
| Tin Plates, per box | 5.50 | to | 5.75 |
| Pig Iron, No. 3 | 1.30 | to | 1.35 |

### KEROSENE.

Market dull, no business doing. Prices are nominally unchanged, but there is no trade to test them. Deliveries good, arrivals small, being only 5,000 cases Comet per steamer *Oswald* from New York. There are about 500,000 cases American Oil in stock; but Russian is in small supply, the stock being reduced to less than 70,000 cases.

QUOTATIONS.

| | | | |
|---|---|---|---|
| Chester | $1.65 | to | 1.67½ |
| Comet | 1.62½ | to | 1.65 |
| Devoe | 1.60 | to | 1.62½ |
| Russian | 1.55 | to | 1.60 |

### SUGAR.

All Browns are lower, with small demand. In Refined there is a large business, as is usual at the approach of summer. Stock appears ample for all requirements at present, viz.,—Browns 190,000 piculs, and Refined 55,000 piculs.

| | PER PICUL. | |
|---|---|---|
| Brown Takao | $4.10 | to 4 20 |
| Brown Daitong | 3.10 | to 3.15 |
| Brown Canton | — | |
| Brown Java and Penang | 3.40 | to 4.10 |
| White Refined | 4.80 | to 7.25 |

## EXPORTS.

### RAW SILK.

Our last issue was dated the 12th instant since which date settlements on this market are 133 piculs (being about three-fourths old silk and one-fourth new) divided thus:—*Hanks* 61 piculs, *Re-reels* 23 piculs, *Kakeda* 7 piculs, *Hamatsuki* 42 piculs. There have been no direct shipments during the week.

The old silk settled was chiefly for Europe and the few parcels new silk are mostly destined for the United States. Stock on hand is 1,500 piculs nearly all old staple.

The market really opened yesterday, the 18th instant, although one or two fragments were purchased the previous day. Business was done in good *Koshu Filatures* 14/16 deniers at $580, Good *Joshu Re reels* bringing $560 and $555. The fragments named above consisted of *Filatures* No. 2 at $542½ and No. 3 at $525 both for Europe. Exchange on London 6 m/s Bankers' Credits being quoted at 3/3⅛.

The weather has been eminently favourable for the new crop and the *récolte* is finished in Koshu, Joshu, and Bushu provinces. In Shinshu and Oshu all goes well so far, and present indications are for a crop of 40,000 to 45,000 piculs. The amount available for export will vary with the demand for home use which will undoubtedly be large should prices for export be very low.

Compared with last year, the prices paid for New silk show a marked difference. In 1890, $655 and $600 with exchange at 3/5¾.—this year $580 and $560 with exchange 3/3½, or say a reduction of 15 per cent. on the opening price for Koshu filatures.

So far no silk from the Shinshu factories has come to hand; but it is understood that they are as usual using their machinery on *Koshu* cocoons until such time as their own cocoons are ready for reeling.

Present arrivals show good colour and quality. They wind well, but exhibit some irregularities in the make of the thread as though the reelers had been unduly hasty in rushing the staple forward to market. Next receipts will undoubtedly show an improvement in this respect.

There has been only one shipping opportunity during the week the English mail taking 94 bales. The present total to date is 34,034 piculs, against 35,455 last year and 41,390 at same date in 1889.

*Hanks.*—No business for export has been done, but a couple bales *Hachoji* have been taken for native use at a price equal to about $427 here.

*Filatures.*—Nothing but low grades have been bought for Europe—mostly old silk in mixed parcels at $525. In new staple for the same destination a few boxes *Koshu* were settled at $542½ and some *Tsuruga* at $525.

In new silk for the States a parcel of good 1½ *Koshu* Filature *Yajima*—was done at $580, and a lot of similar silk *Kusanagisha* will probably be shipped per Bearer at or about the same figure. Dealers are trying to maintain prices, but find it difficult to get a rise out of the foreign buyers.

*Rereels.*—Two parcels of New Joshu have been fixed for the outging steamer, prices paid being as under: Tortoise $560, *Shorusha* $555. Further arrivals will be here in a few days.

*Kakeda.*—No new silk expected for about a fortnight; in the meantime there is a retail business in old staple. *Red flag* $540, *Green-flag* $520, *Yellow flag* $500.

*Oshu.*—A parcel of Old *Hamatsuki* found a buyer at $480. This has been the solitary transaction in this class.

### WASTE SILK.

A feeble business of 44 piculs divided thus:—*Noshi* 11 piculs, *Kibiso* 18 piculs, *Neri* 15 piculs. All this was old fibre.

The season draws to a close, and we may look for a slight interregnum before the new one opens. There are rumours of a parcel *Joshu Noshi* having arrived which contains old and new fibre mixed in the same skeins.

The export to date, including departures during the past week, amounts to 31,862 piculs against 29.740 at same date last year and 31,649 on the 19th June, 1889.

*Pierced Cocoons.*—No sign of any new produce as yet, and nothing worth attention in the stock of old crop.

*Noshi.*—A dab of Filature done at $135, and some fine *Hachoji* at $137½. No business in new fibre at present.

*Kibiso*—A little lot of Filature at $110 is all the business in this department.

*Sundries*—One lot of Joshiu *Neri* has been taken into godown on trial, but no actual business has transpired.

We withdraw all quotations pending the arrival of new fibre.

### TEA.

Market has been a little less active, but prices are unchanged, although settlements have fallen off in volume. Second crop is now in full supply, and the quality is considered somewhat inferior to that of last year. Settlements for the season are 145,000 piculs against 125,000 to same date last year. Export goes on at a lively gait, Overland, Suez, sail and rail, all getting a good share of the trade. Present figures are about 11 million pounds against 8 millions to same date in 1890.

**Contractors to the British Admiralty, Foreign Governments, Leading Steamship Companies, & Yacht Owners in all parts of the World.**

## STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. We are also sole makers of the

**KINGDON PATENT LIGHT PORTABLE ENGINE**

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives *three times the power*, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

*Illustrated Catalogue in English, French, or Spanish Send for Copy to*

## SIMPSON, STRICKLAND & CO.

WORKS: DARTMOUTH, SOUTH DEVON (ENGLAND), LONDON OFFICE: 181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28 1890.

**KEATING'S INSECT POWDER.**

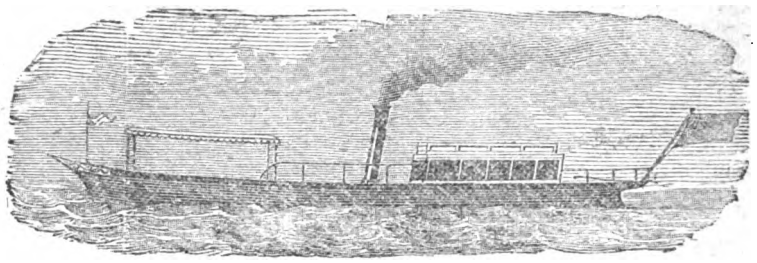
BUGS, FLEAS, MOTHS, BEETLES, and all other insects, are destroyed by KEATING'S INSECT POWDER, which is quite harmless to Domestic Animals. In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application. Ask for and take no other than "KEATING'S POWDER," as imitations are noxious, and fail in giving satisfaction. Sold by all Chemists, in Tins and Bottles.

**THE GREATEST WONDER OF MODERN TIMES.**

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

# YARROW'S

## SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

## YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

On the 22nd inst, at Bushey, Herts, W. S. MITCHELL, aged 81. (By telegram.)

## SUMMARY OF NEWS.

THE *Yamato Kan* started from Nagasaki on the 20th instant for Shanghai.

A SLIGHT shock of earthquake was felt in the capital on the 22nd instant at 9h. 43m. 42s. a.m.

IT is said thatMr. Oki Morikata, the late Governor of Shiga, who has been officially pardoned, will shortly be appointed to office.

A SERIES of meetings of Directors of various Meteorological Observatories throughout the Empire was commenced in Tokyo on the 20th instant.

IN consequence of the recent heavy rain the Tama river in the Tama district of Kanagawa Prefecture overflowed, and the Hinohashi bridge was swept away.

A MEETING of members of the Yokohama City Assembly has been announced to take place on the 23rd instant, to discuss the sale of the Yokohama Gas Works.

A TELEGRAM from Kagoshima reports that the buildings of the 152nd National Bank in that city were burnt to the ground on the morning of the 19th instant.

DURING the period from the 4th instant, up to the 18th, seven males and six females were attacked by a disease resembling cholera in Osaka, of whom seven succumbed to the malady and one recovered, the remainder being still under medical treatment.

MR. WATANABE, Prefect of Shiga, who was appointed recently Director of the Hokkaido Administration Board, left Otsu on the 19th instant for the capital.

H.I.M. THE EMPRESS, who has been slightly indisposed for some time, will remove in a day or two to the Shiba Detached Palace, to stay there for about three weeks.

IN consequence of the recent heavy rains various rivers in the province of Kozuke, Gumma Prefecture, have overflowed, and several bridges have been destroyed or damaged.

MR. TAGUCHI UKICHI has been successful in the election to fill the vacancy caused by the resignation of Mr. Hatakeyama, a member of the Tokyo City Assembly for Hongo district.

ON the 19th instant about half-past four in the afternoon, the district of Koga in Shiga Prefecture was visited by a severe hail-storm and much damage was caused to the tobacco crop.

THE section of railway between Morioka (Iwate Prefecture) and Aomori (Aomori Prefecture), which is now in course of construction, is expected to be completed before the end of October next.

TELEGRAPHIC information has been received by the Government to the effect that the *Yamato Kan*, which left Yokosuka on the 14th instant for Shanghai, arrived at that port on the 22nd instant.

MR. SOYEDA JUICHI, a Councillor of the Finance Department, was appointed on the 18th instant a private secretary of the Minister of State for Finance, being raised to third class *sonin* rank.

A KUMAMOTO telegram under date the 22nd instant conveys intelligence that the section between Kumamoto and Takashi on the Kyushu Railway line will be opened for traffic on the 1st proximo.

A MEETING of members of the Central Sanitary Association was held on the 22nd instant, at the Home Department to discuss the Regulations as to the examination of vessels coming from infected ports.

COUNT TERAJIMA, Vice-President of the Privy Council, is at present confined to his residence on account of illness. Count Yanagiwara, a Privy Councillor, has been suffering for some time from disease of the brain.

MR. KAWASHIMA, a wealthy merchant of Tokyo, has applied to the Authorities for permission to commence mining operations for silver at Nakasaki at the foot of Asahidake, Nishimurayama district, Yamagata Prefecture.

H.I.M. THE EMPRESS, accompanied by Mr. Sannomiya, Master of Services to Her Majesty, and several Court Ladies, proceeded to the Aoyama Palace on the 23rd instant to pay her respects to H.I.M. the Empress-Dowager.

A TELEGRAM from Nagano under date the 19th instant states that nine persons have been attacked by cholera at Yasuokamura in Ina district, of whom two succumbed to the malady. There are signs of the complaint spreading.

MR. YOSHITAKE SEIICHIRO, manager of the Yokohama branch of the Nippon Yusen Kaisha, has been appointed manager of the company's branch at Shanghai, and will start for his post about the 7th proximo. Mr. Iwanago will take his place in conjunction with his present office of manager of the Bureau of Shipping in the head office, Tokyo.

DR. CARGILL G. KNOTT, formerly of the Science College in the Imperial University, started from the capital on the 19th instant for home. Professor Kato, President, and a large number of instructors and students of the University accompanied him to the Shimbashi Station.

THE ordinary Tuesday meeting of the Cabinet was held on the 23rd instant, and was attended by Counts Matsukata, Goto, and Oki, Viscounts Shinagawa, Tanaka, Enomoto, and Takashima, and Mr. Mutsu, by whom the revision of the Regulations as to the organization of the Government was discussed.

ABOUT a week ago an outbreak of fire took place at Fujisawamura, Echigo, and some fifty-seven dwellings were burnt to the ground. The owners of the buildings intend now to raise an action for damages amounting to *yen* 70,000 against the Chief Commissioner of the Railway Bureau on the ground that the conflagration was caused by sparks from a locomotive, which passed the village shortly before the occurrence of the fire.

MAJOR-GENERAL OSHIMA, the newly appointed Commander of the Ninth Brigade (Hiroshima), left the capital on the 23rd instant for his post. Lieutenant-General Takashima, Minister of State for War, Major-General Okazawa, Vice-Minister of the War Department, Lieutenant-General Miyoshi, Inspector-General of the Army Inspection Bureau, Major-General Kodama, and over a hundred field-officers accompanied him to the Shimbashi Station.

THE recent improvement in the Import trade has fallen off somewhat in consequence of the farmers having been busily engaged in rice-planting, in addition to which the rise in exchange has affected the market by causing holders to press sales, and this following on the late extensive business to arrive has made dealers buy sparingly. Nevertheless business has been done in Yarns, Shirtings, and Cotton Piece-goods generally, and a small demand has set in for Flannels, Serges, and other Woollen goods. There is no change to note in the Metal trade, holders still refusing business at a decline in rates. Kerosene is still dull, and two of the cargoes which we recently referred to as being near port have arrived, which further increases the stock of American Oil by over 100,000 cases. The Sugar trade remains dull, though there have been dealings in White sorts; Browns, however, receive but little attention. The Silk trade has not been extensive in volume, though most of the parcels purchased have been new staple. The rise in exchange has caused some disturbance, and operators have obtained Silk at a reduction on the opening rates. The business done has been chiefly for the United States, and hereafter arrivals will probably come in sufficient quantities to admit of large transactions. Everything points to a large crop of first-class Silk, and reeling is now in very extensive operation. Nothing worth reporting in Waste Silk. The Tea trade has fallen off, partly due to buyers seeking a reduction in price, and to some extent on account of the inferior quality of second crop leaf, which is not comparatively equal to the early pickings. Exchange has fluctuated somewhat, and after improving at the commencement of the week declined partially, but a check to the downward tendency came yesterday, and rates are firm at the close.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The Tokyo Rice Exchange affair has been the principal topic of discussion in the columns of the vernacular press during the present week. The leading facts bearing on this incident have been already published in these columns. Public faith in the business management of existing companies has of late been rudely shaken by a series of astonishing disclosures, of which the Rice Exchange affair has attracted the greatest attention. According to trustworthy information thus far obtained, there seems to be good ground to believe that the brokers and some of the patrons of the institution will arrive at an understanding with Mr. Nakamura, President of the Exchange, and that the place will be soon re-opened for business. Two courses are now spoken of: either Mr. Nakamura will return over 300,000 *yen* which he owes, through the 6th National Bank, to the Exchange; or failing that result, the brokers and some of the interested parties will supply the institution with funds to begin its life anew.

* * *

The Tokyo papers, with a few exceptions, approve the measure taken by the Authorities for the protection of the shareholders and brokers of the Rice Exchange, but most of them accompany their approval with expressions of regret that the Government's method of supervision over corporations under its special control has left something to be desired. The *Mainichi Shimbun* notably criticises the fact that the Authorities did not take speedier measures to correct the irregularities of the President of the Tokyo Rice Exchange. The 6th National Bank was known to have forfeited the trust of business men, and the Government should have interfered at the outset to prevent the depositing of the funds of the Exchange in such a dangerous institution.

* * *

Not a few Japanese believe with the *Nippon*, that the recent disclosures of irregularities and corruption in the business world are indications of an approaching revolution in the character of Japanese merchants. "Gamblers and speculators," who, by flattery and corruption, monopolize all profitable official business, have been suffered too long to contaminate the atmosphere, and to mar the prospects of honest and conscientious tradesfolk. That people of such a depraved character should become objects of general condemnation is but natural and just. The *Nippon* rejoices that things are growing more and more favourable for the rise of a new and true generation of business men.

* * *

What excites most curiosity is the so-called "political aspect" of the Rice Exchange affair. In certain quarters it is believed a deep political intrigue may be traced throughout the whole trouble. It is rumoured that the money said to have been used by Mr. Nakamura for speculative purposes, was really employed in the interests of the *Kaishin-to* as well as for the personal benefit of its leader Count Okuma, and that the present Cabinet has brought the matter before the public with the object of injuring the reputation of that party and its distinguished leader. We (*Japan Mail*) do not put the slightest confidence in any of these rumours, but it will not be uninteresting to note what the papers say on this aspect of the question, if only to show how high party feeling runs among certain journalists of the capital.

* * *

The *Tokyo Shimpo*, deploring the generally unsatisfactory condition of companies and banks, observes that one of the evil consequences of such a state of things is to tempt destitute politicians into various improper schemes for obtaining money. It refers, by way of illustration, to the connection between a certain party, hitherto proud of its wealth, and various companies and banks, as the Imperial Fisheries Company, the Specie Bank, and the Stock Exchange. In another article, the same paper discusses the Rice Exchange question, and while disclaiming any faith in the rumour that the Government's real object in examining the books of the Exchange was to embarrass the *Kaishin-to*, concludes that the latter has no ground to complain of the part taken by the Government, since, whatever might be the motive of the authorities, it cannot be gainsaid that the Exchange has been guilty of great irregularities.

* * *

The *Kokumin Shimbun* observes with surprise an increasing rise in the standard of living among politicians of the opposition who have hitherto been proud of their plain and simple mode of life. Where do they obtain money to support such luxurious habits? Perhaps by borrowing from usurers, or by receiving subsidies from statesmen in power. At all events, the effect of their present way of life will be to necessitate recourse to some such help. The pro-Government party, continues the Tokyo paper, has already commenced to embarrass the Opposition by cutting off its sources of supply. Our contemporary recommends parties out of power not to fall into the snares of officialdom.

* * *

The *Kokkai*, conspicuous for its dislike of the *Kaishin-to*, writes at great length on the evil of mixing politics and business. It believes in the rumours about Count Okuma's connection with the Rice Exchange, and condemns the conduct of both the *Kaishin-to* and the Cabinet. The latter did wrong to leave things so long uninvestigated, and will do wrong again if it is actuated in its present somewhat precipitate conduct toward the Exchange by any political move against the *Kaishin-to*.

* * *

It is significant that the Radical organs do not even notice the prevailing rumours about the political aspect of the President of the Rice Exchange difficulty. Three or four years ago these papers would have been the first to circulate such rumours. The silence in the present instance is a strong proof, if proof were wanted, of a changed attitude towards their former bitter enemies.

* * *

The repeated suspensions of the lecture meetings lately held by the Radicals and the Progressionists forms the subject of vigorous remonstrance in the organs of those parties. The *Yomiuri Shimbun* complains that lately the *Kaishin-to* held lecture meetings four times and was ordered to suspend the meeting on each occasion; and similarly the *Jiyu-to* held four lecture meetings and had to suspend them all. A member of the staff of the *Yomiuri* called on the Metropolitan Police Inspector-General and sought his opinion on the matter. Mr. Sonoda is said to have replied that the standard by which he is guided in suspending lecture meetings is the character of the views expressed. Our contemporary questions the wisdom of such a standard. Opinions may be unreasonable without being in the least injurious to public peace and good order. The Tokyo paper advises Mr. Sonoda to consider the question carefully.

* * *

The *Mainichi Shimbun* writes in a more outspoken manner. It does not hesitate to state that on several occasions the police authorities gave orders for suspension without any adequate reason. It further states that the speakers were directed to leave the platform whenever they referred to the Otsu affair and to the Cabinet's responsibility in connection with that affair, though in point of fact they were merely repeating on the platform what had already appeared in the press. The Tokyo paper apprehends that the Government's severity in dealing with its opponents may revert upon its own head one of these days. It asks Cabinet Ministers to reflect upon the causes that led to the downfall of the great fabric of the Tokugawa Government. Among those courses, one of the most important was the contempt with which the officials of that Government regarded the young student politicians of the time. Members of the parties out of power are far ahead of the youthful politicians of those days in knowledge as well experience. Our contemporary recommends Cabinet Ministers to abandon despotic measures and to engage in open and constitutional contention with their political adversaries.

* * *

The *Choya Shimbun* still indites interminable essays on the revival of the *jo-i* spirit. Continuing from the articles of last week, it goes on to remark that some foreign diplomatists in Japan, especially the late Sir Harry Parkes, were instrumental in sowing the seeds of umbrage in Japanese breasts. Further the haughty and insulting conduct of Westerns toward Japanese, coupled with their licentiousness and vulgarity, have been extremely repugnant to the Japanese, and have in some measure helped to call forth the present antagonism to foreigners.

* * *

The *Chiusei Nippo* following at the heels of the *Choya*, attempts to refute every one of its opinions. We will refer to the controversy again when it is finished.

* * *

The *Jiji Shimpo* states that there is an increasing tendency in a certain quarter to desire a foreign war, and expresses fears that this tendency may, if not put under proper restraints, lead to disastrous consequences. There are statesmen in every country and in every age who are always on the watch to utilize such a warlike tendency for the attainment of their own selfish ambition. That the tendency is discernible is declared to be an unmistakeable sign that the people have become weary of the way things are going on in the country. It is now only a little more than twenty years since Japan entered on her career of new progress, and she is still in the period of her active youth. There, can be, therefore, no difficulty in keeping the energies of the people entirely absorbed in various works of reform and improvement. It is the fault of statesmen in power that there should be people with leisure and cause to wish for a foreign war. Our contemporary recommends the Cabinet to turn the warlike spirit of the people into the more profitable spheres of navigation, commerce, and colonization.

* * *

The *Tokyo Asahi Shimbun* has excellent articles on the responsibility of journalists as representatives of public opinion in matters of morality. It deplores the general break-down of national morality. There are only two ways in which this state of things can be mended, namely, education and public opinion. Education is incomparably the more efficient, but its results are slow of realization. Consequently it is of great importance to pay attention to the more immediate if less thorough-going, agency of public opinion. Newspapers and periodicals are the organs through which public sanction or disapproval is expressed. While such is the great responsibility of journalists, our contemporary regrets to observe that very few Japanese journalists pay serious attention to the important functions with which they are entrusted.

* * *

The *Mainichi Shimbun* also deplores the low standard of public morality among journalists of the present day. Some of the so-called respectable papers do not hesitate to indulge in personal abuse of the lowest kind without the least justification. The immediate occasion evoking this remonstrance is the Rice Exchange affair. The *Mainichi* complains of the unjust and absurd charges that have been preferred against the *Kaishin-to* by the organs of its enemies, and says that the originators and the disseminators of such vile reports have placed themselves in a disgraceful situation.

* * *

The artizans of the capital—carpenters, masons, smiths, *sakwan*, and so forth, recently formed an association called the *Kôgyô Kyôkai* (Industrial Association). The principal promoters of the movement are the Governor of Tokyo and a man named Sakuma, evidently belonging to the artizan class. The present members number a little over two hundred, and are said to represent twenty-six different kinds of trades. The *Hochi Shimbun* writing on this

Digitized by Google

subject, observes that this is a most desirable step by way of precaution against future troubles between labour and capital. At present the relations between masters and employés are very cordial; the two stand to each other in the position of *oya-bun* and *ko-bun* respectively, or parents and children. But with the introduction of modern machines and European systems of industry, our contemporary is sure that, unless some precautionary measures are taken, Japan will be harrassed by the same troubles respecting capital and labour as those now embarrassing Western countries. An association like the one just formed in Tokyo, if led in a proper manner, should prove a good means of mitigating the evils of the approaching conflict between capital and labour. The *Hochi* further expresses a hope that the Government will consult the views of the Industrial Association about the Labour Regulations, which it is reported to be drawing up.

## *EDITORIAL NOTES.*

### THE TOKYO RICE EXCHANGE.

THE commercial world of Tokyo has been thrown into a state of excitement and consternation by intelligence of serious troubles in connection with the Tokyo Rice Exchange. According to the present law, every broker doing business in the Exchange is obliged to lodge security to the amount of 2,400 *yen*. The number of persons by whom security had been lodged under the provisions of this law was a hundred, and the sums lodged by them aggregated two hundred and forty thousand *yen*. This money appears to have been under the control of the President of the Exchange, Mr. Nakamura Michita, who also had charge of the bargain money entrusted to the brokers by speculators among the general public, its total being two hundred thousand *yen* approximately. Recently, it began to be rumoured that Mr. Nakamura had fallen into financial difficulties, and ere long the report assumed the definite shape that he had borrowed two hundred and eighty thousand *yen* from the Specie Bank, and that the latter, failing to obtain payment, was about to sue for its money. The aggregate sums in the President's hands, namely, four hundred and forty thousand *yen*, were supposed to be deposited in the Sixth and Third National Banks, the Kawasaki Bank, and the Mitsui Bank, but people said that three hundred thousand *yen* of the total had been spent by Mr. Nakamura on his own account. The suspicions of the Government having been aroused, two officials, Messrs. Sekine and Yamada, were despatched from the Department of Agriculture and Commerce on the 18th instant, without any warning, to inspect the books of the Rice Exchange; and at the same time the Finance Department sent officers to the head office of the Sixth National Bank in Fukushima, to its branch office in Honcho, Tokyo, and to the Third National Bank, with instructions to make full inquiries. Nothing is yet clearly known as to the results of these inquiries, but it is stated that great irregularities were discovered in the books of the Sixth National Bank. At all events the Bank was ordered to cease doing business from the 20th instant, and it may well be supposed that this step did not tend to allay public excitement. So far as we can gather from the statements in the vernacular press, the money nominally deposited in the Sixth National Bank consisted of the security lodged by the brokers, whereas the Third National Bank held the sums deposited by dealers in stocks. The latter, as we have said, aggregated two hundred thousand *yen*, but the deposit held by the Third Bank does not exceed one hundred and forty thousand. There appears thus to be a deficiency of sixty thousand *yen* in the funds for which the Exchange is responsible to the general public. A sum comparatively so insignificant ought not to cause serious embarrassment, and hopes were at first entertained that Mr. Nakamura would make it good without difficulty. But the closing of the Sixth National Bank suggests that the brokers' surety monies will be found deficient, and as the Exchange itself was closed by order on the same day (20th instant), something very like a panic has resulted. Indeed it is now confidently stated that the Sixth National Bank never received any monies on account of the Exchange, but simply gave deposit vouchers to suit Mr. Nakamura's convenience. A proceeding so singular is explained by reference to the relations existing between Mr. Nakamura and Mr. Tsuji, the President of the Bank. It is stated that when Mr. Nakamura was President of the Specie Bank several year ago, he saved the Sixth National Bank from ruin, and subsequently placed its present head, Mr. Tsuji, under great obligations to him. Owing to this record, and to a feeling of complete confidence in Mr. Nakamura's ability, Mr. Tsuji did not hesitate to give deposit vouchers without touching the money which they represented. How much of these explanations may be false, how much trustworthy, we cannot pretend to say. The latest rumour is that the deficiency in the funds of the Exchange amounts to six hundred thousand *yen*. At such a time it may well be supposed that the gossips are not idle. The *Toyo Shimpo*, for example, faithful to its rôle of reckless sensation, pretends to be correctly informed that the money made away with by Mr. Nakamura has gone to meet the outlay of the *Kaishin-to* for political purposes, but that is doubtless a mere canard. The President of the Tokyo Rice Exchange, we may add, is not a Government nominee. He is elected by the shareholders, but his final appointment to office has to be approved by the Minister of State for Agriculture and Commerce.

* * *

According to the books of the Tokyo Rice Exchange, as examined on the 20th instant, the following sums stand to the credit of the Exchange on current or deposit account, in the Banks enumerated:—

| | YEN. |
|---|---|
| 1st National Bank | 1,500 |
| 27th National Bank | 27,000 |
| 12th National Bank | 5,200 |
| 100th National Bank | 24,000 |
| 13th National Bank | 18,000 |
| 77th National Bank | 23,800 |
| Imamura Bank | 20,000 |
| 30th National Bank | 7,000 |
| 3rd National Bank | 25,100 |
| 5th National Bank | 10,000 |
| 113th National Bank | 18,500 |
| Yasuda Bank | 7,000 |
| 150th National Bank | 16,000 |
| Mitsui Bank | 3,700 |
| Kujime Bank | 3,510 |
| 32nd National Bank | 26,100 |
| Kawasaki Bank | 15,000 |
| 27th National Bank (fixed deposit) | 52,000 |
| 77th National Bank (fixed deposit) | 10,000 |
| 150th National Bank (fixed deposit) | 10,000 |
| 32nd National Bank (fixed deposit) | 36,000 |
| Kawasaki Bank (fixed deposit) | 12,500 |
| Total | 372,010 |

According to the statements previously published, the aggregate amount that ought to be standing to the credit of the Exchange is 440,000 *yen*. Hence it would appear that the deficiency is 68,000 *yen*. Nevertheless, the vernacular press continues to assert that the Exchange is condemned to lose three hundred thousand *yen* Pending further information it is, consequently, impossible to arrive at a clear understanding of the situation.

### THE JAPANESE IN AMERICA.

WE take the following from the *San Francico Chronicle*:—The immigration question at this port is assuming great importance, particularly with reference to the landing of Japanese, who are coming over in great numbers and making determined efforts to stay here. It is proposed to establish a Japanese colony on the Pacific coast, and agents in Japan are now holding forth promises of the great riches to be gained here to induce the natives to enter into the scheme. Indeed little coaxing is necessary, and the indications are that a great influx of Japanese immigrants is imminent. The customs officials view the matter this way, and every effort is being made to get such legal machinery as may be used against them in such shape as to be ready for any emergency.

* * *

The *City of Peking* recently brought news to the Inspector of Immigration at this port of the organization of a Japanese colony to settle somewhere in California. Kataoka Kenkichi is the originator of the movement. He is a native of Tosa, Japan, and a member of the House of Representatives, a gentleman noted for his "shrewdness and virtue," it is said, who has become weary of the ever changing condition of political affairs in his native land. He was once an influential member of the Liberal party, but now proposes to resign his seat in the Diet and devote himself to his pet scheme of establishing a Japanese colony in California. At present he is soliciting the co-operation of other moneyed men in the empire, and already his plans have assumed practical shape. At Tosa and other places in the interior of Japan his agents are selecting able-bodied married farmers of from 20 to 30 years of age. These are to form the advance guard for the colony. Mr. Kataoka is a Christian by conversion, and two of his sons are at present in Vancouver. To them has been intrusted the task of selecting a suitable site for the colony.

* * *

Dr. Hatch, the newly appointed Inspector of Immigration at this point, finds that the provisions of the Federal law under which he is working are but little understood by those most interested. For instance, the Pacific Mail Steamship Company was greatly surprised yesterday when notified that the law held it responsible for the board and keeping of the four Japanese women to whom the Inspector refused a landing from the steamer *Belgic* and who are now being cared for by the Methodist Mission pending their deportation if such should be the result of the legal proceedings now being taken in the case. The law provides that "the cost of their maintenance while on land, as well as the expense of the return of such aliens, shall be borne by the owner or owners of the vessel on which such aliens came; and if any master, agent, consignee, or owner of such vessel shall refuse to receive back on board the vessel such aliens, or shall neglect to detain them thereon, or shall refuse or neglect to return them to the port from which they came, or to pay the cost of their maintenance while on land, such master, agent, consignee, or owner shall be deemed guilty of a misdemeanor, and shall be punished by a fine not less than $300 for each and every offence; and any such vessel shall not have clearance from any port of the United States while such fine is unpaid."

* * *

After reading the new immigration law, counsel for the four Japanese women who are now held at the mission pending the result of their *habeas corpus* petitions, has taken the same view of the matter as Assistant District Attorney Witter, who maintained that the Inspector's decision was final, the only appeal being to the Secretary of the Treasury. So the appeal to Circuit Judge Sawyer, which was to have been made this week, has been abandoned and the appeal will be made direct to Washington. It should, under the law, be lodged with the Superintendent of Immigration, but as no Superintendent has yet been appointed, the document, which is now almost ready for transmission, will go to the Secretary. The appeal sets forth that the petitioners are not paupers, nor liable to become public charges, nor yet intending to enter houses of prostitution. Little Tanchi Iku, the Japanese woman who made her escape from the mission one night last week by lowering herself from the third story window on a slender cord that was eighteen feet too short, has complained to Hasegawa, the Japanese who interested himself in the women and got out the writs for them, of severe internal pains, caused by the shortness of that cord and the resultant fall on the wooden pavement beneath. Yesterday Inspector Hatch inquired into the matter, and found that no serious injury had been sustained by Tanchi. It

Digitized by Google

has since been learned that on the night Tanchi stole away, she wandered down to the water's edge, intending to end her life. A night watchman hovered around her, however, and prevented the suicide. Then she changed her mind, jumped into a hack and was driven to a hotel where she spent the night. The next day the superintendent of the mission found her on Merchant Street, and again she was led into captivity. Tanchi and her three companions all maintain their intention to lead honourable lives, and declare that if they are driven back to their native land, where they cannot earn more than a dollar a week, they will be driven to lives of shame. The matron of the institution speaks well of them all, and efforts are being made to keep them here. Dr. Harris, the superintendent of the Japanese Mission on Jessie Street, is to be appealed to, and if bonds of $100 in each case can be raised, guaranteetng that the women will not become public charges nor enter upon immoral lives for one year, they may escape deportation. The youngest of the damsels is but 13. She is remarkably bright, and in the two weeks or more she has been at the Methodist Mission has learned the English alphabet, and has been led through several pages of the "cat saw the fox run," etc.

* * *

Twenty-six Japanese arrived on the *City of Peking*. All of them were allowed to land. Only two women were in the party, both servants of a lady who is to reside in Berkeley for a couple of years. All of the men had money. Some claimed to own considerable property in Japan. Some were students, some farmers, some artisans. One bright young fellow said he came over here to study the customs of the people. with the intention of going back and teaching his countrymen the ways of civilized, Chrisianized men.

* * *

The dispatch from Portland announcing the decision of United States Judge Deady in the cases of the nine Japanese women who were refused a landing here, has filled the Federal officials here with amazement and dismay. The women came over from Japan on the steamer *Pemptos*. Among them were Alfred Eaton and his sweetheart. They were refused a landing. Eaton tried to bribe the customs officials and he is now in the Country Jail awaiting trial for that offence. That Judge Deady should permit the women to land after the San Francisco official had remanded them to Japan has made the vexed question of Japanese immigration to this country more muddled than ever. Fears are entertained that all Japanese who are refused an entry at this port will now go to Portland and secure their release on writs of *habeas corpus*. There is a silver lining to the big cloud for one person in the city, however, and that is Alfred Eaton, the lover. When a *Chronicle* reporter saw him at the jail yesterday and told him his sweetheart had been permitted to land, he was overjoyed. "She will not have to go back to Japan? Is it really true? Then I don't care what they do with me. I know she will be true and wait for me, no matter how long. Yes, I'm sorry I tried to bribe that fellow on the boat, but I did not think it a great sin at the time. It was often done, I was told. I would not have done it for myself, but I had rather suffer anything than have her sent back."

* * *

It is evident from all this that a result long feared is now in sight. The Americans are beginning to agitate against Japanese immigration as they have already agitated with success against Chinese. Without considering the rights and wrongs of such action, we can easily foresee its issue, namely that the very exceptional popularity now enjoyed by the United States in Japan, will be changed into dislike and indignation. The Japanese will be bitterly and justly hurt to find themselves treated as uncivilized Orientals, whose ingress into a Western State tends to demoralize its people and disturb its good order. It has never been charged against them that they are prone to any of the vices which are supposed to render the Chinese undesirable acquisitions, and if America adopts an exclusionary attitude towards them, there will be difficulty in discovering any tangible reasons for it. We cannot conceive, however, that the agitation now seemingly imminent is likely to extend beyond a limited section of the people of the Pacific slope, or to be seriously regarded by American Legislators. At all events the contingency opens up a new phase of Japan's foreign relations, and will certainly not help to smoothe the ruffled feelings of Japanese conservatives.

---

### RAILWAY PROBLEMS IN JAPAN, PRESENT AND FUTURE.

THE above is the title of an elaborate essay recently distributed among his friends by Mr. K. Saburi, M. E., Chief Engineer of the projected Ko-shin Railway. Briefly stated, the author's object is, first, to show that the existing Japanese railways "are unsatisfactory from industrial as well as from strategical points of view; secondly, to demonstrate that it is of urgent importance to lay out lines through the central mountainous districts; and thirdly, to prove that in Japan railways ought to be in the hands of a few big private companies, instead of being owned by the State, as advocated by some people. The existing lines run in most cases along the sea coast and though the open country. But localities bordering the sea had long enjoyed the full advantages of modern navigation, and in this respect stood comparatively in little need of increased facilities of land transportation. The author therefore thinks that the laying of iron roads through these districts has not led to any remarkable development of either commerce or industry, and has been distinctly injurious to the growth of the mercantile marine. As for the strategical disadvantages of laying railways along the sea-shore, they are too obvious to be pointed out. It thus results that from a military as well as an industrial point of view, railways must be constructed through the central mountainous regions of the country; for such lines, in addition to affording safe routes of transit for troops in times of a foreign war, would at the same time serve to open the hitherto undeveloped resources of the interior, and to carry modern civilization into the most backward localities of the Empire. That the lines already constructed, with a few exceptions, have not served to stimulate the growth of commerce and industry, is shown, in the author's opinion, by the ratio between the receipts from passengers and those from goods conveyed, their respective percentages being 70.3 and 29.7; while the average ratio between these two items of receipts in the nine Western countries of Germany, Austria, Italy, Belgium, France, the United States, Russia, England, and Switzerland, is 34 to 66. Mr. Saburi concludes that the great desideratum of the time is the construction of what he calls "lines of the second period," as distinguished from the lines now running in the open regions, which he calls "lines of the first period." According to his estimate, about 2,470 miles of lines of the second period will have to be constructed during the next two or three decades, at an aggregate outlay of about 133,000,000 *yen*, in order to bring the railway system of the country into a state of tolerable completeness. The proposed roads are divided by him into five systems, thoseof Oshu, of the Centre, of San-in-do, of Shikoku, and of Southern Kyushu. In respect of the outlay connected with these lines, the author is of opinion that the average cost of construction per mile would be 53,860 *yen*, the average cost per mile of the lines of the first period being 44.319. These figures show, it is observed *en passant*, that the expense of construction is exceptionally low in Japan; the average per mile being £38,000 iu England, £25.385 in Belgium, £19,585 in Italy, £11,092 in the United States, 53.456 dollars in Africa £21,236 in Germany, £27,704 in France, £22,570 in Switzerland, £13.202 in India, and 68,770 dollars in Austrialia. As to the cost of maintenance, Mr. Saburi believes that there would be little difference between the lines of the first period and those of the second. Neither would there be much difference in respect of the profits obtainable from the two. The sooner the lines of the second period are constructed the better for the country. Then follows the question: how is the requisite capital to be obtained? Here we learn the author's view as to the comparative merits of private and state ownership of railways. Trade, we read, is dull; money is tight; there are even several railway companies already plunged deep in the sea of financial embarrassment. Under such circumstances few capitalists will be found willing to invest money in railway enterprise. The difficulty is, not scarcity of money, but want of confidence in the future of such undertakings. Many persons, therefore, advise that all existing private railways should be purchased by the Government and that all future lines should be constructed and owned by the State. But Mr. Saburi is strongly opposed to such a course. Its advocates base their arguments on strategic expediency and on considerations of national as well as of railway economy. As to strategical expediency, the author thinks that people fall into the error of likening the condition of Japan to that of the continental countries of Europe, which maintain towards each other an attitude of armed peace. Japan is more like England in her military position; and in accordance with England's example, her railways had better be owned by private companies than by the Government. Moreover, all necessary precautions may be taken by means of a law or an ordinance binding all the private companies to place their lines at the service of the State in times of emergency. Considering the matter from the standpoint of national economy, the advocates of State ownership claim that the best means of developing railways is to place them in the hands of the State, since capitalists then invest with a sense of perfect security. But Mr. Saburi finds no reason in such a contention What is required being credit, he thinks that a Government guarantee of 4 or 5 per cent. profit for the first five or six years would answer the purpose equally well. Finally, our author deals with the arguments that the existence of many small independent railway companies prevents any process of equalizing profits and losses, and that much of what is now required for the maintenance of separate work-shops, and of the employment of officials, could easily be economized if the different lines were in the hands of a single owner. Guided by the experience of more than twenty years, and holding the most profitable lines in the country, the Government obtains only six per cent. profit per annum, and the Railway Bureau has spent about 34½ million *yen* for the construction of only 541 miles of lines. From these circumstances our author infers that it is not necessarily a measure of sound economy to put railways in the hands of the Government. None the less he fully recognizes the disadvantages incidental to the separate existence of many small companies. He thinks that a system of centralization should be carried out, and that the railways throughout the country, both those already existing, and those to be hereafter constructed, should be owned by five or six large companies. Under ordinary circumstances Japanese capital should be employed, but when necessary he recommends the introduction of foreign capital. Further, he holds that not only is the State bound to give guaranty of interest to the lines of the second period, but also that the localities through which particular lines are to pass should afford some substantial help to the respective companies. The pamphlet, apart from any question of its intrinsic value, has been very opportunely distributed, as the railway question is fast becoming one of the most prominent problems of practical politics.

---

### THE TOKYO ELECTRIC LIGHT COMPANY.

THE Tokyo Electric Light Company's affairs have apparently fallen into great disorder. According to the accounts published in the capital, the Company has been unable to meet bills of exchange held by the Mitsui Bussan Kaisha, and the latter, having instituted a suit at law,

Digitized by Google

proceeded, through their counsel, Mr. Kawamura, to place seals on the Company's plant and other property. This happened on the 18th instant, and immediately after the departure of Mr. Kawamura and the Court Officials, some of the seals were broken. An investigation was held at the office of the Company the following day, and rumour says that criminal proceedings will be instituted in connection with the breaking of the seals. However this may be, it appears certain that the Company is in serious difficulties, and that it will probably constitute another addition to the list of Japanese enterprises which, inaugurated with fair prospects of success, have failed through lack of organizing ability, or owing to some other cause fatal to success in business. Such incidents as the over-issue of shares of the Sapporo Sugar Manufacturing Company, the closing of the Tokyo Rice Exchange and the Sixth National Bank, and the failure of the Electric Light Company, happening within a space of three weeks, cannot but produce embarrassing disturbance, if not a panic, in the share market.

### A ROMANTIC PHANTASY.

It has been objected that when we spoke of the Asiatic Society's having deprived itself, in deference to a "romantic phantasy," of the excellent reports prepared by its Hon. Recording Secretary, we intended to attack "the Society." The charge is scarcely worth noticing. It certainly would not be preferred by any member of the Society who paused to reflect on the facts, which, as we understand them, are briefly these:—It used to be the habit of the Asiatic Society to furnish to the *Japan Mail* an account of its proceedings, inclusive of a summary of the papers read at each meeting. During Dr. Knott's tenure of the office of Hon. Recording Secretary, these summaries were quite exceptional in respect of lucidity, comprehensiveness, and terseness. The labour of preparing them must have been very great, and their compilation for the use of the *Japan Mail* ultimately became a matter of arrangement between the Hon. Recording Secretary and this journal. At the close of last year, however, a protest was advanced by the editor of the *Japan Gazette*, who claimed that his paper was equally entitled to receive the reports, and the Council admitted the justice of this view, thus departing from the unvaried practice of the past twenty years, and necessarily putting an end to the arrangement existing between the Hon. Recording Secretary and the *Japan Mail*. The immediate consequence was that the Hon. Recording Secretary ceased to prepare special reports, and confined himself to very brief accounts of the meetings, the newspapers being left to supplement these outlines by means of the resources at their own command. It will therefore be seen that, as a matter of plain fact, Dr. Knott's admirable digests of the Society's papers were no longer given to the public, a change which naturally excited regret. As to the principle endorsed and acted on by the Society's Council, it is, in our opinion, a "romantic phantasy," and we use the words, not in any offensive or aggressive sense, but because they appear applicable without being at all discourteous. The notion that a newspaper has the smallest shadow of title to be supplied with the reports of a learned Society, can only be called a romantic phantasy. Every Society, equally with every private individual, has a perfect right to choose the organ through which its proceedings shall be published. The Asiatic Society choose the *Japan Mail* and having abode by that choice for twenty years, suddenly departed from it in deference to a claim for equal treatment advanced by another newspaper. We ourselves do not pretend for an instant that we possess any title to exceptional consideration at the hands of the Council, though a title might perhaps be constructed out of our original relations with the Asiatic Society and our recognised position as its sole medium of publication during twenty years. So far from seeking special treatment, or complaining because we no longer receive it, we are distinctly of opinion that the Society should seek the utmost possible publicity for its proceedings, and should endeavour to have them published by every English journal in the East. But that is a question of the Society's interests, pure and simple. It has nothing in common with the admission that newspaper A is justified in protesting because newspaper B is the sole recipient of a Society's reports. The Society's absolute right of choice is indisputable, and that any journal should impugn it is mere impertinence. If the Council of the Asiatic Society, influenced by a very altruistic conception of justice, showed itself good-naturedly lenient towards a plea of this shadowy character, its complaisance certainly furnishes no ground for attack especially by critics who, like ourselves, distinctly consider that the result is conducive to the interests of the Society. Indeed, to be suspected of "attacking" the Society seems to us almost comical. Men with Dr. Knott's special facility for preparing a lucid digest are few and far between, and even though the Society could count on the perpetual possession of such Secretaries, it would probably consult its own interests best by following the course now adopted, and leaving newspapers to prepare their own detailed reports.

### CRUELTY TO HORSES.

When will a Prevention of Cruelty to Animals Society be organized in Tokyo? Here is a lesson for the drivers of omnibuses and tramcars in the capital:—An exemplary sentence by Sir Andrew Lusk has just been pronounced in the City of London Police Court. It often happens that charges of cruelty to horses by cab-drivers are dismissed with a caution, or if a conviction is secured the penalty is generally a fine; and cautions and fines are proved to be only partially deterrent. Evidence was offered in the case which came before Sir A. Lusk which proved that the defendant's conduct to the horse he was driving was outrageously brutal. He stood up on his seat and slashed the animal over the head and back. A police sergeant declared that he had never seen so flagrant a case during his twenty years' experience. The magistrate would not accept the excuses offered, and condemned the man to seven days' hard labour. As sentences of the kind are intended to act as warnings and to prevent similar outrages in the future, it is to be hoped that the Society which so zealously concerns itself with the practical encouragement of kindness to animals will take steps to let those who are both ignorant and cruel know to what their disregard of the ordinary laws of humanity will render them liable.

### SAILING RACE.

A race for the boats of the A Division of the Sailing Club took place on Saturday. The course was the Home Course once round, a distance of about 8½ miles. The start took place at two o'clock, the wind being then about N.E., a fresh breeze. *Daimyo* was first to round the mark placed at the eastern end of the south breakwater, *Molly Bawn* next, *Lady Louise* a minute later, then *Princess Maud*, and *Lesbiolle* last of all. This order was maintained to the South Mark, a flag boat moored off the Bluff, but *Lady Louise* was not slow to avail herself of a chance offered to squeeze round between *Molly* and the mark, and of thus establishing a lead which she maintained to the finish. *Lesbiolle* similarly gave the mark a wide berth, and *Princess Maud* hauling up sharp round, got one step ahead in the race. The beat to the North Mark was not marked by any particular incidents except that the blue cutter, which went like a witch from first to last, and agreeably astonished those who had read of the casualty that she was subjected to not long ago, increased her lead upon *Molly*; that *Princess Maud* also gradually overhauled *Molly*, and that at length, half way to the mark, *Lesbiolle* came up and passed both these craft. After the latter event *Princess Maud* decided to try different tactics and going about stood out on the port tack for a considerable distance. Meanwhile the others continued on the starboard tack till well in to the land, and then went for the mark fetching it in from three to five tacks. During the beating *Lesbiolle* fell back, and was astern of both *Lady Louise* and *Molly* in rounding, while *Princess Maud*, who seemed at first likely to profit by a slight eastering of the wind, was three and a half minutes astern of the big yawl. Spinnakers were in use during half of the run back to the South Mark and the position of affairs remained practically unaltered, *Lady Louise* however, increasing her advantage on *Molly* to a full minute. A reach to the mark at the breakwater entrance was followed by a run in, when *Molly* setting her spinnaker was able to cut a few yards off the blue cutter's lead but not enough to enable her to save time allowance. A prize in each class was awarded respectively to *Lesbiolle*, *Daimiyo*, and *Lady Louise*. *Lesbiolle* did not show up well in the race at all, but having no competitor probably Captain Weston did not care to push her. The duties of officer of the day were discharged by Mr. J. O. Averill, junior, assisted by Mr. Beart. Following are the official times:—

| | Rating. | Round Breakwater. h.m.s. | South Mark. h.m.s. | North Mark, h.m.s. | Finish. h.m.s |
|---|---|---|---|---|---|
| *Lesbiolle* | 38 | 2.18.50 | 2.32.45 | 3.13 00 | 4.03.40 |
| | | 3.53.25 | 3.36.05 | | |
| *Daimyo* | 31 | 2.16.45 | 2.30.25 | 3.06.30 | 3.53.35 |
| | | 3.44.05 | 3.28.50 | | |
| *Lady Louise* | 25 | 2.18.05 | 2.31.55 | 3.09.09 | 3.57.00 |
| | | 3.47.06 | 3.31.00 | | |
| *Molly Bawn* | 24½ | 2.17.10 | 2.31.50 | 3.09.45 | 3.58.55 |
| | | 3.49.45 | 3.32.00 | | |

### A "TIMES" FOR JAPAN.

The idea of starting a big newspaper which shall serve as a *Times* for Japan is again on the *tapis*. It will be remembered that there was much talk of such a scheme some time ago, and that Viscount Aoki was supposed to be the originator. On the present occasion the names of the chief promoters are not mentioned, but the motive influencing them is described in the same terms as before, namely, a conviction that the chief obstacle in Japan's path towards obtaining international recognition is the ignorance of foreigners as to her true condition and as to the real character of her people. All the present journals of the capital are classed by the projectors of the new paper as political organs, which, while professing independence and impartiality, are in fact edited and published in the interests either of some party or of the Government. A first class journal, honestly independent and free from all political bias, would therefore supply a patent want. The capital of the new journal is said to be two hundred thousand *yen*, of which three-fifths have been put up by a nobleman, and one-fifth is promised by a commoner. The idea is to print the paper in English and to secure for it a life of six years, which is the period within which, according to the estimate of the promoters, Treaty Revision and its correlated problems are likely to be fully solved. Messrs. Toyama, Kato, Nishimura, and others are spoken of us editors.

### A STRIKE OF CHINESE WORKMEN.

From China we hear of a strike among the workmen employed at the Heho Palace Gardens, Peking, built by the Emperor as a place of recreation for the Empress Dowager after her retirement from the active management of affairs of State. It is stated that "more than 10,000 workmen have been engaged to hasten the work. Of these 3,000 or more are carvers, who have caused much trouble while working in other portions of the Imperial Palace ere this. Knowing that the date for completing the gardens was close, they struck for higher wages, and in this demand all the carpenters joined. They were receiving individually three meals and 2,000 Peking cash per diem. They demanded 7,500 Peking cash a day. On their employers refusing to comply with this exorbitant request, a signal gun, previously agreed upon, was fired, and thousands of workmen, carvers, carpenters, and masons began to make threatening demonstrations. The officials on guard, finding the police unable to cope with

Digitized by Google

the multitude, especially as the carpenters were armed with axes, quickly sounded the alarm, calling on the rifle brigade, Yuen-ming-yuen guards, and cavalry for assistance. These came with all speed and surrounded the strikers. The officials and the head firms now began to negotiate, and all parties were satisfied by an increase of 2,000 Peking cash a day for each man."

### THE RADICALS AND THE POLICE.

THE section of the Radical Party which follows the banner of Mr. Oi Kentaro, the opponent of Mixed Residence, held a meeting on the evening of the 21st in the Yayoi-Kan, Shiba Park. A stormy meeting it proved. Fifteen gentlemen were advertised to speak, but only five of them managed to obtain a hearing. The fifth was Mr. Hayashi Homei, who commenced a violent diatribe against the Government, and the police ordered the suspension of the meeting. This order seems to have produced great exasperation. A *Soshi* who was present, seizing a glass that stood on the rostrum, hurled it at the constable who had given the order. The glass struck a pillar and was broken. The constable at once summoned his comrades from without, and a regular melée ensued. The windows were all broken, the furniture smashed, and several policemen and spectators received more or less severe injuries. It appears that a number of *Soshi* had attended the meeting with the express intention of watching for an opportunity to create a disturbance. They were successful. Meanwhile, the Radicals are acquiring uneviable notoriety as disturbers of the public peace. The laws may be rigorous and harsh, but they are the laws nevertheless, and when a section of the men whose business it is to legislate set the example of violating the laws, they may pretend to be acting in the cause of liberty, but in truth they are propagandists of license. One of the police engaged in attempting to quell the disturbance on the 21st instant, was so badly hurt that he had to be taken to hospital. The Radicals, however, claim that the police behaved with needless violence, and a complaint has been addressed to the Minister of the Interior and the Chief of Police on the subject.

* * *

The behaviour of the police at the Radicals' lecture meeting in the Yayoikan on the 21st instant, gave so much umbrage to the politicians who had convened the meeting that three of them, Messrs. Yamada Toji, Ishizaka Masataka, and Shimoizaka Gonzaburo, waited on the Chief of Police the following day and preferred a complaint to him, alleging that the man who had commenced the disturbance was in no way connected with the meeting, and that the conduct of the constables had greatly exceeded the bounds of propriety. Mr. Sonoda's reply was of an eminently practical and decided character. The account given by his visitors, he said, represented the police as having greatly exceeded the limits of their duty. Letters had also been sent to him in the same sense, some of them assuming a threatening tone. But the report submitted by the police themselves did not bear out these complaints. In these days of constitutional government it was an extremely grave matter to interfere with freedom of speech to the extent of suspending a meeting, and his constant instructions to the police were to avoid such an extreme measure as far as possible. That very morning he had summoned all the Inspectors and admonished them to extend to public speakers the utmost license compatible with good order. Doubtless shortcomings on the side of the police were sometimes responsible for the necessity of suspending lecture meetings or interrupting speeches, but the chief cause of these incidents was the want of moderation shown by the speakers themselves. The action recently taken by members of the Radical Party to persuade the Cabinet to resign was a case in point. Failing to accomplish their purpose, they had alleged arbitrary rejection of their memorial by the Ministers, and had delivered inflamatory speeches calculated to excite their audience. From the point of view of preserving public order, the prime duty of police officials, such proceedings could not be tolerated. When the meeting was announced at which Count Itagaki spoke, the police had been exceptionally desirous to avoid all interference, but the nature of the addresses delivered had forced their hand. Then followed the assembly at the Koseikan, when a number of *soshi*, taking advantage of the occasion, planned a disturbance. The measures taken by the police, however, sufficed to prevent anything of the kind. Finally, with regard to the affair on the 21st, the statements made by the police differed totally from those made on the other side. Moreover, the written reports of the speeches delivered at that and at other meetings, showed that language calculated to excite its hearers to acts of violence was used. Whatever forbearance the police might exercise, so long as speeches of that nature were delivered, trouble could not possibly be avoided. It was alleged in the present instance that the originator of the disturbance had no connection with the meeting, but the evidence submitted by the constables on duty did not bear out that allegation. On the contrary, it appeared that, immediately on the order of suspension being given, the first rioter, Yamada Keiji, had ascended the rostrum, and announced his intention of speaking in lieu of the last member whose address had been stopped, and that his fashion of speech was to seize a glass and hurl it at the constable. Appearances indicated not only that he was connected with the meeting, but that his procedure was dictated by previous arrangement. It was the desire of the police to pay the utmost respect to the privilege of free speech, and to avoid all recourse to force. But they were bound to ensure the preservation of public peace and good order, and with that end they must employ strong measures if the necessity arose. Politicians had it in their own power to avert all unpleasant conjunctures by observing moderation, and he hoped that his visitors would assist in that respect. Finally, he regretted to be obliged to return the document of complaint which the three representatives had brought, but he trusted that if they had any reason to find fault with the action of the police hereafter, they would not fail to address him.

* * *

Mr. Sonoda spoke well and forcibly. The farce which the Radicals are playing now deceives nobody. It is perfectly easy for them to hold their meetings and conduct their campaign against the Government without provoking police interference. But that is precisely what they do not want. A great part of their game is to pose as victims of official tyranny; to persuade the public that so long as the present Government remains in power, the liberty of the subject exists only in name. Doubtless they will succeed to a certain extent, for ignorrant people impressed by the fact, and not troubling themselves to investigate the true reasons of these frequent suppressions of speeches and dispersals of meetings, will conclude that the Government keeps itself in power by force only. All that is very well understood, and so long as the Radicals perform their farce merely for the benefit of the giddy and illiterate masses, their procedure may avoid ridicule though it certainly merits no applause. But when they undertake to carry their complaints to the Chief of Police, they impart to their acting an air of realism that becomes absurd. There are limits to credulity.

### THE "NIPPON'S" SURPRISE.

THE *Nippon* avows itself greatly surprised that any one should be so unreasonable as to accuse it of fostering an anti-foreign spirit. Emerging from a period of suspension, it lost no time in protesting against this charge. The United States excludes Chinese immigrants and Russia expels the Jews from her dominions. These says the *Nippon*, are to be classed as genuine results of *Jo-i* (barbarian expelling) sentiment. But in Japan no such spirit exists. There are, however, some Japanese who love the Occident more than they love their own country; trust Europeans more than they trust Japanese, and would replace Japanese institutions, manners, and customs by Western. "In opposition to these folks we endeavour to give expression and impart strength to the sentiment of national individuality, a sentiment that sways Western peoples more powerfully than it sways the Japanese. If our contemporaries imagine that we seek to revive the *Jo-i* spirit because we criticise foreign things and foreign ways, we invite them to consider the language used by foreign journals towards Japan. If our readers desire that we should cease to criticise Europeans and confine ourselves to admiring and extolling them, then we must recommend the abandonment of any attempt to strengthen the army and navy because every addition to our military force must seem offensive to foreigners." In another article the same paper laughs at the chimera of the *Jo-i* spirit being revived. "Living in houses of Occidental build, wearing the garments of the West, and studying the arts and sciences of Europe and America, it is impossible for Japanese to be really inimical to foreigners. We are entirely at a loss, therefore, to understand why the Government and a portion of the public entertain apprehensions that the *Jo-i* spirit may be revived. The lovers of the West among our countrymen preach about the fraternity of nations, but the principle they would inculcate existed a thousand years ago in Japan. Does it exist to-day among Christian nations? The exclusion of the Chinese from America, the expulsion of the Jews from Russia—these events furnish an answer. Every patriot is bound to watch the attitude and actions of alien nations. If we be told that such a mood is not consistent with the genuine principles of fraternity, then we answer, what of Western peoples themselves? Does their conduct towards each other, do their huge armaments and their mutual distrust, accord with this creed of fraternity? Are we to imitate them in one direction and condemn them in another?"

* * *

These utterances form part of a controversy provoked chiefly by the *Choya Shimbun's* protests against the writings of the so-called Conservative and Nationalistic journals. The *Nippon*, prominent among the latter newspapers, fights temperately and intelligently. The *Chusei Nippo*, prominent among the former, adheres to its old methods of trenchant abuse. It calls its opponents *shurui*, or "ill-favoured folks," and upbraids them for seeking to prevent the development of a spirit essential to Japanese independence. To fix upon the Conservatives the name of the "*Jo-i* party" is a mere device on the part of the ill-favoured folks to obscure the truth, says the *Chusei Nippo*. At the same time, that journal does not object to the title of *Jo-i*. On the contrary, it holds the appellation sacred, as having been used by the loyal men who, a quarter of a century ago, made it their battle-cry to overthrow the Tokugawa Shogunate and restore the Imperial Government. "The *Jo-i* spirit," declares the Conservative organ, "is only another name for the spirit of national self-esteem. If a nation is without self-esteem, its independence must be shortlived."

* * *

The *Choya Shimbun*, in the sequel of a series of articles protesting very strongly against the Conservative idea that the better traits of Japanese disposition are being undermined by a wholesale adoption of foreign fashions, refers the origin of the conservative reaction in great part to Sir Harry Parkes. Its method of arriving at this conclusion is thus:—At the time of the fall of the Tokugawa Regency, a result which Sir Harry Parkes had anticipated, and to which he had contributed, British influence in Japan was strongly in the ascendancy. Sir Harry made the most of the situation. He insisted on having his own way in everything, and sometimes his masterful, imperious disposition betrayed him into disregard of courtesy. To his management is to be attributed the conclusion of the Austro-Hungarian Treaty, the most unfavourable to Japan of all her foreign covenants. To his example, also, must be attributed something of the overbearing, exacting methods

Digitized by Google

employed by other Foreign Representatives towards Japan—methods inaugurated and practised in China. Little by little the Japanese, under these circumstances, began to dislike and distrust Europeans, of whom they regarded Sir Harry Parkes as a type, and the evil impression was deepened by the conduct of England in respect to Treaty Revision, for she consulted only her own interests, and paid no attention to the laws of justice and right. Perhaps the Japanese are not to be altogether blamed if these experiences engendered feelings of umbrage.

* * *

Such is the *Choya's* analysis. It does not believe that Japanese women are likely to lose any of their fine traits of unselfishness, devotion, and fidelity because they dress their hair differently from the ancient style and because they shake hands by way of salutation instead of bowing. It does not believe that the principles of economy are violated because a man lives in a brick house instead of inhabiting a wooden edifice where the flames find him out once in every seven or ten years. It does not believe, in short, that a change of externals affects a nation's individuality. But it does believe that the Japanese have been treated with scant ceremony by foreigners, and that like begets like. *Uwo-gokoro areba mizu-gokoro ari.* We reproduce these opinions without attempting to discuss them.

### NEW MINES.

If all, or even a majority of, the reports published by the vernacular press be trustworthy, Japan's mineral resources still invite enterprise. We read constantly of mines being discovered here and there, though it must be confessed that their subsequent history remains, for the most part, untold. The *Yomiuri Shimbun* gives the latest of these accounts. It says that a certain Mr. Igarashi Naojiro, of Kawahigashi, in Niigata Prefecture, having devoted himself from his youth to mining matters, and spent the last ten years examining all the mineral districts in the country, has discovered a copper mine at Higashi-mine, in Niigata Prefecture. The vein is said to be 26 inches thick. He has also discovered a deposit of gold, silver, and copper at Ozato-toge in Yamagata Prefecture. Specimens of ore taken from the latter have been examined in the laboratory of the Department of Agriculture and Commerce, the result being that in a hundred thousand parts there were found ·0032 of gold, ·042 of silver and 25.4 of copper. Application to work these two mines has been made on the estimate that the average daily output will be 3,000 *kwan* (about 45 tons), from which the yield of gold will be 9 *momme* (522 grains Troy), of silver 126 *momme* (6,508 grains Troy), and of copper 751 *kwan* 200 *momme*.

### THE SYSTEM OF THE EXCHANGES.

The *Nichi Nichi Shimbun*, while refraining from any criticism of the affairs of the Tokyo Rice Exchange and its President until full details are known, justly draws attention to the hazardous system which appears to be followed in the management of the funds of Exchanges. It seems from what has transpired that the President of an Exchange has full control of the monies held in the name of the institution. He may deposit them in any bank he pleases, and draw them out at any moment either for his own use or for some other purpose of which the shareholders have no cognizance. The sums paid by brokers in the form of security and the sums received by brokers in connection with time transactions in stocks, are alike in the full charge of the President, and if he chooses to behave dishonestly, there is practically no method of checking him unless a deficit makes itself apparent as has been the case in respect of the Tokyo Rice Exchange. The *Nichi Nichi* urges the importance of stricter inspection on the part of the Government, but the question naturally presents itself, why the Government and not the shareholders themselves? Surely it is the business of the latter to look after their own affairs instead of relying on official supervision? If the shareholders inaugurated a proper system of auditing accounts and inspecting vouchers, it would not be possible for a President to play fast and loose with the funds of the company. So long as the Government is trusted to discharge functions that really devolve on private individuals, so long will things remain in an unsound condition.

### SANITARY PRECAUTIONS.

The following Imperial Ordinance was issued on the 22nd instant:—

We hereby authorise the adoption of sanitary measures with regard to ships coming from foreign ports, and order the same to be promulgated.

(Imperial Sign-manual).
(Great Seal).

(Countersigned) Viscount Shinagawa,
Minister of State for Home Affairs.

Dated, 22nd day of sixth month of 24th year of Meiji (22nd of June, 1891).

Ordinance No. 65.

Art. 1.—When it is held that grounds exist for apprehending an epidemic disease, ships coming from ports specially designated by the Minister of State for the interior, even though the localities in which the ports are situated be not infected with cholera, shall be visited by health officers, and required to report whether any cases of illness or any deaths have occurred on board.

Art. 2.—Should it be found that cases of sickness or death have occurred on board, the health officers shall require the ship to anchor at an indicated place deemed sufficiently isolated to prevent the spread of the contagion to another ship or to the land. The persons suffering from disease shall be taken to a Contagious Diseases Hospital or to the attached dwellings, or to any other place judged suitable by the health officers, and the bodies of those who have died of the disease shall be cremated at places fixed by the Local Officials. If, after having been fully subjected to the process of disinfection, the people from the ship are allowed to land, then the vessel itself and such portions of its cargo as are thought liable to propagate the disease, shall be fully disinfected, after which communication with other ships and the landing of the cargo shall be allowed.

Art. 3.—Persons refusing to supply the information referred to in Art. 1, or violating the provisions of Art. 2, or offering opposition to the carrying out of any part of this Ordinance, shall be punished according to the provisions of the Penal Code.

Art. 4.—On each occasion of putting this Ordinance into force, the Minister of State for Home Affairs shall notify the date of its going into operation and the date of its termination.

### Notification of the Department.

No. 26.

The provisions of Imperial Ordinance No. 65, of the sixth month of the twenty-fourth year of Meiji (June, 1891) shall become effective at Nagasaki from this day in respect of all ships coming from, or having touched at, Hongkong, Shanghai, or other ports in the south of China.

(Signed) Viscount Shinagawa,
Minister of State for Home Affairs.

Dated 22nd day of 6th month of 24th year of Meiji (22nd June, 1891).

### RESCUE OF A FRENCH WAR-SHIP.

The following story, some parts of which read very strangely, especially the rescue of the Captain of the *Seignelay's* wife by a swimming Arab, is given by the *Daily Chronicle*:—

A private letter from H.M.S. *Undaunted*, at Jaffa, dated the 4th of May, and received in London on Wednesday, brings the news of a splendid feat performed by the vessel, the command of which Lord Charles Beresford has had for about sixteen months. Jaffa, the port of Jerusalem, has an evil reputation among mariners. Vessels of any burthen have to lie off in the roads, and the coasting steamers are often obliged to carry on their passengers to Beyrout or Port Said according as they are northward or southward bound. In these roads arrived and anchored on the 23rd of April the French cruiser *Seignelay*. On Sunday, the 26th, it came on to blow hard from the westward. The *Seignelay* had no steam up, and the gale increasing, first one anchor parted, then the other, and the gale drove the vessel ashore on a sandbank about half a mile from the land. The catastrophe, as it appeared to be, took place at nightfall, and the *Seignelay's* captain, evidently fearing the worst, lowered a boat, which, before it reached the shore, lost two oars and its rudder. Messrs. Cook's chief boatman, Suleiman, who greatly distinguished himself by saving life from a Russian steamer three months before, plunged into the surf with his brothers and brought the boat and men safely ashore. The Arab then swam off to the *Seignelay* with a letter offering assistance, and got back to the shore at half an hour after midnight, having been in the water some two and half hours. He reported that there was no "hole" in the ship, so that there were hopes of saving her. But in the morning she seemed so firmly embedded that the attempt was thought desperate. So the brave Suleiman swam off again through the heavy sea and brought ashore, hanging round his neck, the captain's wife. In the course of the 27th the Austrian Lloyd steamer tried to render help, but was obliged to abandon the attempt. Then Captain Lord Charles Beresford appeared on the scene in the *Undaunted*, accompanied by the gun-boat *Melita*, Commander King-Hall. They found that the heavy sea had driven the *Seignelay* into shallow water; and the *Melita*, which is of 670 tons and 1,200 horse-power, could not get nearer than 300 yards from the Frenchman, while the *Undaunted*, which is of 5,600 tons and 8,500 horse-power, could not get further in than 450 yards outside the *Melita*. In other words, the *Undaunted* was about half a mile from the *Seignelay*. However, says the letter, "with determined work night and day, a steel wire hawser, fifteen shackles of chain cable, and the help of God, we floated her in fifty-two hours. The French and English worked like Trojans together."

"Fifteen shackles of chain cable and the help of God" has a good old-time ring about it.

### ORDER.

The preservation of good order, says the *Tokyo Shimpo*, is easier under a despotic than under a constitutional form of Government. If public peace and good order were not well preserved in former days, they are even less likely to be preserved now. Order in the highest ranks of the Government means, *inter alia*, that affairs which should not be published are kept hidden. But Ministerial secrets are not infrequently divulged now-a-days. Order means also that officials do not engage in trade. But can it be denied that officials do engage in trade, if not in their own names then in the names of others? Order in political parties means loyalty, but politicians in Japan are not loyal: they desert their parties and oppose their leaders. Order in schools means that the pupils are obedient and subject to discipline. But in Japanese Schools the students too often take the law into their own hands. In a word, good order cannot be said to prevail in Japan. Such is the verdict of the *Tokyo Shimpo*—a just verdict, we think.

* * *

In another article the same paper severely criticises Japanese politicians. In this country, it says, there are plenty of politicians who cry aloud for liberty, popular rights, national prestige, public responsibility, commercial morality, and industrial enterprise, but their arguments are unpractical and their own methods belie their precepts. Consider the recent movements of the Radicals: their disorderly and ill-considered attempts to induce the Cabinet to resign. They invited failure by their imprudent and futile behaviour, but failure does not seem to abash them. "With shame we are obliged to confess that the majority of the so-called politicians of the time are men without property or regular occupation who live much after the fashion of street *raconteurs* or other caterers to vulgar amusement. The object of their political movements is to procure a living for themselves, not to promote public interests. They are demoralizing politics, and if the rising generation follows their example, the future of constitutional institutions in Japan is dark."

### COUNT VON MOLTKE.

It was the late Count von Moltke's fate occasionally to meet with praise out of all proportion to what he considered his deserts. In all such cases he never failed politely but unmistakably to express his disapproval. In the "Song of the New German Empire," written by an author of considerable talent, he was, in one of the poems specially dedicated to him, represented as standing in the spirit world with the shades of Alexander, Cæsar, Frederick the Great, Napoleon, and Wellington bowing to him in recognition of his superior greatness. In reply to this dedication Count Moltke wrote:—"The poet may be a spendthrift. With lavish hands he distributes diamonds and pearls, the stars of the sky and the flowers of the earth: in like manner he spends his praise. In this sense, I take it, have I in your poem been compared with the great men of antiquity, for these men were great also in misfortune, and even chiefly in that; we have seen only success. You may call this chance, good luck, fate, or Providence: men alone did not bring it about. Such gigantic achievements are the outcome of conditions that we neither create nor control. The excellent but unfortunate Pope Adrian caused the following words to be engraved on his tomb: 'What a difference the time makes in which the lot of even the best man is cast.' The irresistible current of circumstances has often caused the most worthy to suffer shipwreck, while the same force has carried to success the less deserving. If I am therefore compelled, and that not from a false or vain modesty, to consider a large portion of the praise you have bestowed upon me as quite undeserved, I am on that account no less appreciative of verses such as yours, that may well outlast many a monument of brass and marble." Not without interest, perhaps, are Moltke's replies given last year to questions put to him and thirteen other old men by the Vienna branch of the People's Education Association of lower Austria. From these it appears that when a boy he was from his tenth year onward taught ten hours a day, that in that year he removed from the country, was but few hours daily in the open air,

Digitized by Google

did not pursue any plays or games methodically, and slept about ten hours of the twenty-four. Under "Special Remarks" he added "cheerless youth, insufficient food, far away from home." As to his more advanced years, we learn that he worked according to the requirements of the day, sometimes many hours; and his long life he ascribes in part to his habit of being some time every day out of doors, even in the worst weather. When in the country, especially in summer, he often spent half the day in the fields. His sleep, even as late as 1890, lasted between eight and nine hours; he ate very little, but concentrated and very nutritious food; and ascribed his hale old age chiefly to God's grace and to moderation in all things. From the *Révue des Révues*, appearing in Paris and edited by Ernest Smith, we learn, through similar questions and answers, that the books and authors that had on the whole influenced him more deeply than any others, were:—The Bible, Homer's Iliad. Littrow's "The Wonders of the Sky," Liebig's "Letters on Agricultural Chemistry," Clausewitz's work on War; also Schiller, Goethe, Shakespeare, Walter Scott, Ranke, Treitschke, and Carlyle's historical writings.

### THE AFFAIRS OF RUSSELL AND CO.

We (*China Mail*) observe that Mr. W. H. Forbes has retired from the National Bank of China. We are authoritatively informed the Bank is not prejudicially affected by the failure of Messrs. Russell & Co. It is announced that the partners of that firm have executed an assignment in New York, where the largest creditors are, of all their estate to Mr. H. Hannah of New York, who has appointed as his agent in Hongkong and Canton, Mr. Sansom Taylor. We may note that Messrs. Shewan & Co. have been entrusted with the management of the Hongkong Rope Manufacturing Co., and have been appointed acting agents of the Batavia Sea and Fire Insurance Co., also that Mr. F. Cass will carry on Messrs. Russell & Co.'s business in Amoy and Formosa. It is also announced that Messrs. Shewan & Co. have to-day (11th inst.) been appointed temporary General Managers of the China and Manila Steamship Co.

### THE AGITATORS.

It is true that freedom of speech and of the pen is not fully enjoyed by the Japanese, and that the fact is often quoted to the nation's disadvantage, but it is equally true that the responsibility for such a state of affairs rests chiefly with agitators of whom Mr. Arai Shogo is a prominent type. This gentleman's latest performance at a meeting held in Yokohama on the 24th inst. rivals some of his previous doings. The meeting had been addressed successively by Messrs. Saito, Hasegawa, and Takahashi without provoking any police interference, when Mr. Arai ascended the rostrum and began to dilate upon his favourite topic, Cabinet responsibility. After insisting that unless the Cabinet acknowledged its united responsibility, the national desire could not be satisfied, he passed on to the Otsu affair, and with admirable patriotism and logic insisted that the outrage committed on the 11th of May against the country's honoured guest was due to the Government's negligence; that the Cabinet ought, therefore, to have resigned *en masse*, and that its failure to do so was disgraceful. From this series of declarations Mr. Arai passed to Tsuda Sanzo, whom he pronounced a lunatic, and therefore not responsible for his actions. To sentence such a man to penal servitude, he said, was contrary to justice, and could not be reconciled with the Penal Code. At this point the police interfered and ordered the meeting to disperse, but a youth immediately sprang forward and thrust the police inspector from his chair. A scene of turmoil ensued. Tobacco boxes were thrown, chairs flourished, and the constables would have been roughly handled had they not been present in sufficient force to protect themselves effectually. Four arrests were made of youths varying from twenty to twenty-six years of age. Of course it is not to be supposed that Mr. Arai Shogo contemplated such a commotion, but the physical disorder caused by his speech was only a reflection of the moral disorder under which he seems himself to labour.

### THE FIGHTING IN CHILI.

An English gentleman who was an eye-witnees of the recent battle at Pozo, sent the following account to a friend in Cornwall, who published it:—

The Government troops were at a great disadvantage in n t being well supplied with big guns, while the Opposition were splendidly armed, their artillery including a large Armstrong gun about 8 ft. long The Government's left wing was defeated first, and there was tremendous slaughter in that part of the field. The left wing finished off, the Opposition turned their attention to the right, and immediately began to drive their opponents towards the Oficina. They were gradually driven in, and bullets were raining down upon them as they sought to escape. The Government officers were in a great fright. As soon as they got into the house they hurriedly stripped off their uniforms and sought to disguise themselves by dressing in workmen's clothes. Soon afterwards Colonel Robles, the Commander-in-Chief of the Government troops, was carried into the house badly wounded by a shot in the back. He was placed in bed, and a doctor was soon in attendance upon him. We helped to bathe his wounds, but before we had been there five minutes the Opposition troops came swarming over the refuse heaps behind and poured several volleys right down into the place. Then they burst into the shed, pointing their rifles every way, and they uncovered several of the wounded men to see if they were shamming. A moment later the officer in charge of these men, who appeared to be nearly mad with the excitement of victory, yelled out for the manager. The manager being away, I stepped forward, when he placed a soldier on each side of me and flourished his revolver in my face. He shouted, "Where is Robles? Tell me at once, or I'll shoot you." Seeing that he was in earnest, I told him the Colonel was in the house, and he made me lead the way to the room. The savage fellow marched in, and, seeing the Colonel in bed, roared out, "Are you Robles?" "Yes," was the reply. "Will you give us satisfaction for what you have been doing?" was the next question. "No." "Then get out of that bed," yelled the fellow, and the poor old wounded Colonel crawled out of the bed and leaned against a table, and then fell on the floor in a corner as the first shot was fired at him, for the officer had ordered his men to shoot him there and then. They fired eighteen shots into him. The men rushed up to him one after the other like infuriated beasts, and discharged their rifles within a few inches of him The old man was torn to pieces, and the walls and floors were splashed all over with blood. Meanwhile one of my friends had been collared and ordered under penalty of death to collect and take care of all arms in the place. The Oficina was full of arms, for when the Government troops retreated into the place they threw away their arms and uniforms and donned workmen's clothes in order to disguise themseleves. Shortly afterwards the troops cleared out to pursue the retreating enemy. While all this had been going on in the Oficina the Opposition cavalry had got round to the north of Buen Retiro, and out on to the Pampa in time to receive the Government troops when they retreated that way, the result being that they were all either shot down or taken prisoners. In the meantime, Pozo was being sacked by the victorious party, most of whom were blind drunk and fighting among themselves like mad beasts. The streets were dotted with dead bodies, and at the doors of all the houses there were piles of them, including women and children.

### COUNT OKUMA AND THE NIPPON YUSEN KAISHA.

The *Kokkai* resumes its attack upon Count Okuma, this time with special reference to our contention that the reasons assigned for the financial embarrassment which it attributes to the Count are plainly erroneous. Our contemporary wonders what connection we have with Count Okuma to induce us to defend him, but this expression of surprise only confirms our previous comment that certain Japanese journals do not seem to appreciate the first duty of a newspaper, namely, to acquaint the public with the truth and to correct errors when it detects them. For our own part, we have a decided distaste to continue this discussion, deeming it an impertinence to undertake a journalistic inquisition into the pecuniary affairs of any private individual. But lest our silence should be construed as an evidence of assent, we will briefly explain why we find it impossible to credit the *Kokkai's* statements on their own merits. In the first place, then, we are wholly at a loss to understand on what ground the *Kokkai* proposes to stand. It has shifted its basis three times. At the outset it alleged that Count Okuma, in anticipation of the revised Treaties allowing foreigners to purchase real estate, had speculated largely in land, so that, when Treaty Revision failed and commercial dulness happened to ensue, he found himself a loser of half a million *yen*. Now, inasmuch as no one knew better than Count Okuma how completely chimerical was the notion that the granting of Mixed Residence would materially affect the price of land, the absurdity of this *canard* was patent. On reflection, therefore, the *Kokkai* abandoned it, and substituted another tale, namely, that the Mexican Government having offered to subsidize the Japan Mail Steamship Company to the extent of a million and a half of *yen* annually for a line of steamers between Japan and Mexico, Count Okuma foresaw a large appreciation of the Company's shares and purchased accordingly. The scheme fell through, however, owing to the failure of Treaty Revision, and a marked deprciation of the shares ensuing, Count Okuma found himself poorer by half a million of *yen*. The trouble with this tale was that the Mexican Government never made any such offer, and that the Foreign Office never gave serious consideration to a project of a line of steamers to Mexico. Once more, then, the *Kokkai* shifted its position, and assumed the ground now occupied by it in its contest with the *Japan Mail*. This time it becomes very circumstantial. The Mexican subsidy and the Mexican line of steamers disappear, and we find Count Okuma projecting a service of steamers across the Pacific to Canada and contemplating an addition of six hundred and twenty thousand *yen* to the subsidy of the Nippon Yusen Kaisha, thus bringing its annual receipts from the Treasury to a million and a half *yen*. In view of the effects likely to be produced on the Company's shares, the Count then purchased 3,600 at 69 *yen* per share, and subsequently 400 at 93 *yen*. But again the project failed owing to the failure of Treaty Revision—what on earth Treaty Revision had to do with a line of Japanese steamers across the Pacific we are unable to conjecture—and Count Okuma's speculation resulted in a loss of 170,000 *yen*, for which the Mitsui Bank is pressing him. Thus we have descended by various steps from an indebtedness of half a million to less than a moiety of that amount. But in its last attempt the *Kokkai* is more unfortunate than ever, for even its arithmetic is hopelessly wrong. The shares of the Nippon Yusen Kaisha are now quoted at 60 *yen*, so that if Count Okuma bought 3,600 at 69 + 400 at 93, his total less could not exceed 45,700 *yen*, instead of 170,000, as the *Kokkai* asserts. We admit the justice of our contemporary's allegation that foreigners cannot be supposed to know the private affairs of Japanese, but foreigners are not entirely without ordinary reasoning power, and when they find a Japanese newspaper giving three different versions of a matter, each disfigured by obvious extravagances, and blundering flagrantly in its arithmetic, they have some right to doubt whether they are hearing the truth. It is plain that at least two out of the three stories circulated by the *Kokkai* must be false. We leave it to choose which pleases it best, or to substitute an equally incredible fourth version at its leisure.

### VISCOUNT YENOMOTO AND TREATY REVISION.

There is a good deal of talk in the *Jiyu* and other journals about Viscount Yenomoto's views in respect of Treaty Revision. The gist of the policy attributed to him is that Revision ought not be deferred; that the continuance of the present state of affairs is inconsistent not only with the national honour of Japan but also with the interests of the Orient in general; and that had previous programmes of Revision been carried out despite their minor disadvantages, the main object aimed at would have been virtually achieved ere now. The Viscount's interviewers further make him say that to revise the Treaties on a basis of absolute equality with Western nations by the process of negotiation, is a more than doubtful enterprise. We do not know how far this version of the views entertained by Viscount Yenomoto may be accurate, but we find nothing in it inconsistent with his procedure in the past. One eminent trait of his character has been unswerving loyalty to his colleagues and their cause. The same spirit that led him to remain true to a fallen dynasty twenty-four years ago, has shown itself in his career ever since. Equally staunch in his support of Count Inouye and of Count Okuma, he enjoys the enviable reputation of absolute indifference to party considerations where the interests of his

Digitized by Google

country are at stake. Such praise, indeed, ought to belong as a matter of course to every honest statesmen, but we are compelled to confess that it has not been always deserved in Japan. Viscount Yenomoto has, therefore, the advantage of approaching this difficult task unhampered by any jealousy or resentment excited in the past. He is known, too, as a man of thoroughly sensible and practical views, who understands what is due to those with whom, as well as to those on whose behalf, he negotiates. If may be, therefore, that achievement is reserved for him.

### CONCERT IN TOKYO.

On Saturday a concert was given in the principal dining hall of the Imperial Hotel, Tokyo, in aid of the Meiji Girls' School, an institution which, in a very short period, has attained considerable proportions, its pupils now aggregating a hundred and seventy. A number of vocal and instrumental pieces were performed in a pleasing manner by pupils of the School and of the Ferris Seminary, as well as by foreign ladies who had kindly participated in organizing the concert. A very large audience was present. It filled the great hall of the hotel to over-flowing, and occupied every available space within hearing or seeing distance. For the majority of the spectators the musical performances in foreign style cannot have possessed much interest, since they were necessarily lacking in brilliancy, and their novelty has long worn off. But the programme was interspersed with other items that could not fail to be entertaining to the Japanese, as for example, the opening address by Mr. Shimada Saburo, President of the Committee of the Whole in the House of Representatives, various pieces on the *Koto*, *Samisen*, and so forth, and a lecture by the celebrated *Koshakushi*, Yencho, who alone is capable of attracting a big audience at any moment. The funds of the School must have benefited largely by the affair, for the expenses cannot have been great, and in addition to the audience of twelve or fifteen hundred who were present, a large number of tickets were sold to well-wishers who did not attend.

### VICE MINISTERS OF STATE.

The *Kokkai* attributes to Count Goto repeated efforts to persuade the Cabinet that Vice-Ministers are unserviceable appendages, and that their abolition would be an economical and useful reform. But from the same authority we learn that the Cabinet has not fallen in with this view; or at any rate is not disposed to give practical effect to it in its entirety without calm reflection and experience. The idea is, we read, that Count Goto had better try the experiment himself in the Department of Communications. It is not easy to conceive that the Count really advocates such a change. In many Departments the Vice-Ministers have always played an important rôle, and their sudden abolition could scarcely fail to cause great inconvenience. The presence of the Minister himself in the Department is necessaritly uncertain. He has to attend the Cabinet and discharge many duties calling him away from his office, and in his absence the Vice-Minister becomes essential, to say nothing of the general assistance rendered by the latter.

### THE KÔSHIN RAILWAY.

Mr. K. Saburi, M.E., whose *brochure* on the Railway Problems in Japan, Present and Future, has already been noticed in these columns, has also published another pamphlet on the Kô-Shin railway. Kô-Shin is a contraction for Kôshû and Shinshû, two provinces in the interior of the main island of Japan. The great resources of these two important provinces, demand, in Mr. Saburi's opinion, the immediate construction of a railway through them. Silk, cocoons, wood, minerals, and countless other articles are exported thence, while, on the other hand, the inhabitants of the localities buy from other provinces rice, fish, salt, tea, sugar, kerosene, cotton, and various other articles of common use. At present the means of transportation are extremely bad in this region. A portion of Shinshû is traversed by the Naoetsu line, but the rest of the province and the whole of Kôshû now chiefly rely for communication with the outer world upon four routes; viz. first, the waters of the Fujikawa; secondly, the Kôshû-kaido; thirdly the Subashiri-kaido; and fourthly the Kiso-kaido. Mr. Saburi's plan is to start the line at Gotemba on the Tokaido railway, and leading it in a north-westerly direction along the northern side of Fujisan, to make it touch Kôfu, the capital city of the Province of Kai (Kôshû). Leaving that place, the line again passes in a north-westerly direction, and going through the thriving town of Suwa, is to extend as far as Matsumoto, a place recently brought into notoriety by a riot. The whole length of the proposed line is 136 miles, while the cost of construction is estimated at 5,300,000 *yen*. The most difficult part of the line would be the digging of a tunnel, 135 chains long, under the Kagikake Pass between Gotemba and Kôfu. The chief engineer calculates that it would require four years to complete the work. As to the probable profits to be realized, Mr. Saburi has made minute investigations, and estimates the receipts from goods at 467,606 *yen* 68 *sen*, while the receipts from passengers are put at 225,280.483 *yen*, the total receipts thus being *yen* 692,887.164. The expenses of working are estimated at 299,940 *yen*. Thus there is a net profit of 392,947.164 *yen* per annum, which is about 7⅜ per cent. upon the estimated cost of construction, 5,300,000 *yen*. A special point of interest to foreign residents and travellers, is that the line would give access to the cool and healthy district on the northern side of Fujisan, where there are plenty of beautiful lakes and picturesque views. The railway also traverses, between Suwa and Matsumoto, a mountainous region of great beauty. About the end of 1886, the road was first projected by the inhabitants of Matsumoto. The original projectors were soon joined by wealthy merchants of Kôfu and Tokyo. Early in 1887, Mr. Saburi make a reconnaisance, and a provisional charter was obtained for the line in July of the same year. Actual surveys were finished in March, 1888, and after the completion of drawings, application was made for a formal charter in September of the same year. But the Railway Bureau did not agree with Mr. Saburi about the practicability of the line between Gotemba and Kofu. Mr. Saburi has since gone over the route once more, and he still adheres to his original plan, which the authorities also seem to persist in condemning. Thus, although a charter has been obtained for the section between Kofu and Matsumoto, the projectors are still unable to convince the authorities of the feasibility of the section between Kofu and Gotemba. Under these circumstances the work has not yet been commenced, and there seems little prospect of it being speedily inaugurated.

* * *

With Mr. Saburi's general views as to the districts through which lines of railway ought to be constructed, most people will be in entire agreement, but it is, of course, impossible to pronounce any opinion as to the road specially referred to in the above pamphlet. We welcome, however, with distinct satisfaction, the method inaugurated by Mr. Saburi of taking the public into the confidence of the projectors. An air of honest practicality is at once imparted to any project by such a plan. Mr. Saburi's estimates of probable profit recall a feature that has often been noticed by critics of Japanese habits. The Japanese compiler of a financial project delights in fractions. When there is question of a big undertaking the cost of which cannot possibly be computed within a margin of several thousand *yen*, the Japanese builder or contractor will undertake to predict the outlay to the third or even fourth place of decimals of a *yen*. To practical folks this looks a little like playingwith a problem. Yet it is consistent with the fashions of the Japanese in everything. Just as in their theatre the spectator is never supposed to believe in the reality of anything he sees, or to be disillusionized because an imaginary corpse removes itself from the stage under cover of a bit of black crape, so the presence of hundredths of a *yen* is not expected to deprive an estimate of its hypothetical character. The compiler puts down his figures and his processes of arriving at them exactly as they have occurred to him, and makes no attempt to discard fractions wholly inconsistent with the notion of a mere estimate. The decimals in his total are like the theatrical dummies. The former make their appearance because of the exigencies of arithmetic, which is governed by rules independent of hypothesis; the latter come on the stage in obedience to laws that forbid acting to be anything more than acting, whatever the talent of the actor or the perfection of his accessories. "Why on earth do you set down *rin* and *mo* in an estimate running to half a million of *yen*?" says the practical foreigner. "Why on earth shouldn't I set them down, since they appear on my *soroban*?" says the matter-of-fact Japanese. Who shall decide between them?

### THE "TOYO SHIMPO."

The *Toyo Shimpo*, an organ of the *Daido-ha*, and therefore a bitter enemy of the *Kaishin-to*, takes the trouble to collect and embody in a leading article all the stories circulated by the *Kokkai* from time to time about Count Okuma's insolvency. It is not easy to perceive whether this miserable crusade is inspired by pure malevolence to Count Okuma, or whether it aims also at discrediting Treaty Revision, on behalf of which he is represented as having expended large sums of money. Whatever be the object, it is easy to detect numerous falsehoods and discrepancies in the story. The *Toyo Shimpo* out does the *Kokkai*, for whereas the latter was content to represent Count Okuma as a wild speculator in land and a demented purchaser of shares with borrowed money, the former now seeks to prove him the cause of the trouble in connection with the Tokyo Rice Exchange. It is on his account, we are told, that Mr. Nakamura, the President of the Exchange, appropriated three hundred thousand *yen* of the funds entrusted to his care. The circulation of these slanders is a disgrace to Japanese journalism. Within a very short time of the removal of its ban of suspension, the *Toyo Shimpo* is endeavouring to show that not temporary interruption but final abolition would have been a worthier sentence.

### A BRAVE WOMAN.

The following story, which we take from a home paper, is worth re-publishing:—

An extraordinary case was reported at a Huddersfield Guardians' meeting. Five years ago the guardians gave relief to the extent of nearly £50 to Matthew Messenger. Since his death his daughter, who follows the occupation of a charwoman, her maximum wages being 8*s* weekly, has denied herself all "luxuries," for the sake of repaying the money and maintaining the honest independence of the family. A few weeks ago she accomplished her purpose, and to the surprise of every one concerned repaid the whole amount, the sacrifice taking every penny of her savings. The guardians did not want to take the money, but no persuasion would induce her to accept one penny back. It was represented to her that illness would find her badly off, but she was so much in earnest in wishing to remove the pauper taint from her family that at length the guardians decided to invest the money in the names of the chairman, treasurer, and clerk of the union for the time being, to be used for her benefit in case of necessity, and at her death the balance, if any, to be paid into the funds of the union, as she has no known relative. The case was described as perfectly unique, and the hope was expressed that such an instance of honest poverty would be made known throughout the country.

### THE NEW YORK LIFE INSURANCE COMPANY.

We have received from the agents, Messrs. Browne & Co., a number of tables and statements showing the advantages to be derived from insurance in the New York Life Insurance Company. It is impossible for us to enter into a discussion of the claims of rival companies, but so far as figures go the tables sent us show that at 1st January, 1889, the position of this Company relative to two others selected for comparison was this: each had a larger amount of insurance in force, a larger amount of admitted assets, and a larger income than the New York Life, but the last named had paid a larger amount of dividends to policy holders, had a larger increase in surplus, and earned more surplus in 1889 than the others. As a matter of fact it paid more dividends, made a larger increase of surplus and earned considerably larger profits

Digitized by Google

than either of the two companies selected for comparison. Taking the accounts for 1890 it is shown that the cash dividends of the New York Life amounted to $2,148,447 and the dividends in reversion added to policies to $3,691,400, as against $1,666,930, and $1,552,192 for one of the companies previously referred fo. Among the other items we note that the percentage in the New York Company of income to living members is 22.81 as against 14.95 for the company mentioned. But for full information on a subject which possesses deep interest to all, we must refer our readers to pamphlets which we do not doubt the agents will place at the disposal of any applicant.

### JAPANESE GUIDES AGAIN.

THE following case has been brought to our notice by the principal person concerned. An English gentleman, at present on a visit to this country, engaged at Nagasaki, as guide, one K. Isogawa. Amongst other places visited was the store of Ikeda, at Kyoto, and here the gentleman purchased goods to the amount of $450, paying a certain sum down, and requesting the goods to be sent on to Yokohama, where the balance would be paid. On the arrival of the case of goods from Kyoto, the owner went to Takanoya, the house from which he was to take delivery, but found that the case had been addressed to the guide, Isogawa. On asking if any instructions came with the case, the people at Takanoya produced a postcard, written in Japanese of course, which the owner of the goods handed to a clerk who came with him from a Yokohama firm, and asked him to interpret to him. The clerk did so to the extent of informing him that the case was from Ikeda, in Kyoto, and that there was so much to pay. But the owner of the goods thought there was something more from the appearance of the postcard, which was very full, and after a little pressure the clerk translated further to the effect that $45 of the amount of the balance was to be paid to Isogawa. Just at this moment the latter walked in, and on being asked about it, denied any knowledge of a commission coming from Ikeda. The owner of the goods, however, made such a representation of his case, that he obtained delivery and of Isogawa's commission as well—ten per cent. —an exceptional ending to a squeeze.

* * *

We have alluded more than once to this matter, but it would appear that the tourist is helplessly doomed to suffer in the manner indicated. Possibly the morality of such transactions may be condoned by some people in whose eyes the guide is entitled to "consideration" from the tradesmen to whom he is so kind as to conduct tourists. But it seems to us that the guide, being already paid handsomely for his services, is by no means justified in putting his hand into his employer's pocket to the tune of ten per cent. on all the latter's purchases. Dealers in bric-a-brac assure us that they cannot possibly fight against the guides. One or two have tried the experiment and found it suicidal. We really see no way out of the trouble, unless some Japanese of the better class will organise a society of trustworthy guides on the lines proposed a few years ago by Mr. Masuda and others.

### RUSSIA AND JAPAN.

A SPECIOUS but, as we think, not altogether sound point is made by the *Mainichi Shimbun* with regard to Russia and Japan. Not a dozen Japanese, says our contemporary, know the Russian language, whereas a very large number are acquainted with English. The consequence is that their ideas of Russia are derived from English writers, who are almost invariably hostile to that country. The *Mainichi* justly observes that to take one's notions of a person or a nation entirely from a hostile witness is a pretty sure way to acquire a prejudiced view. But it goes on to say that, thirty years ago, the Japanese were strongly imbued with the *Jo-i* sentiment in consequence of the teachings of Chinese books, whereas access to direct sources of information led to a complete change of mood. Is that so? We were not aware that the *Jo-i* sentiment had its origin in the writings of Chinese authors. It is generally attributed by historians to an entirely different source. At the same time we entirely agree with the *Mainichi Shimbun* that the Japanese ought to study Russia more closely and directly than by merely reading English works, which, it must be admitted, are usually tinged with hostility to Great Britain's supposed rival in Asia.

### CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for May, showing the foreign trade of Japan for the month:—

EXPORTS AND IMPORTS.

| | 1890. SILVER YEN. | 1891. SILVER YEN. |
|---|---|---|
| Exports | 4,356,692.180 | 6,493,465.080 |
| Imports | 7,194,952.320 | 4,843,208.750 |

### THE TOKYO ELECTRIC LIGHT COMPANY.

WE described in a recent issue how the Mitsui Bussan Kwaisha, being unable to obtain repayment of monies due to it by the Tokyo Electric Light Company, had instituted legal proceedings against the latter and attached its plant, sealing the machines; and how a novel feature had been introduced by the secret removal of the seals at the instance of officers of the Company. It is now stated that the breaking of the seals was perfectly open and above-board. The facts are that when the sealing of the machines was reported to Mr. Minakawa Shiro, Manager of the Electric Light Company, he hastend at once to the place and removed the seals, so that the supply of electric light to the customers of the Company was not interrupted. The Tokyo newspapers say that the directors of the Mitsui Bussan Kaisha were much incensed by this conduct, regarding it as contumelious towards the Court which had granted the attachment, but Mr. Minakawa maintained that the procedure followed by the creditors had been faulty in practice and entirely wrong in principle. In what respect the practice erred we are not told, but the principle alleged was that the creditors had no right to inflict a needless injury on the property of the Company by stopping its business. Both sides were equally interested in avoiding anything prejudicial to the value of the Company's assets, and nothing could be were prejudicial than to suddenly convert the Electric Light Company from an active, money-earning concern, into a bankrupt establishment with no property except the market value of its plant and buildings. It must be confessed that this view is sound in theory, but without knowing the whole history of the affair it is impossible to form a conclusion. The directors of the Mitsui Bussan Kaisha are not all likely to have behaved in a precipitate or imprudent manner.

### THE THREE DEPARTMENTS.

AT present the topic of discussion among administrative reformers in Japan is the *sansho haishi-ron*, or abolition of the three Departments. Members of the House of Peers are credited with the conception, and the three Departments are those of Education, of Communications, and of Agriculture and Commerce. How the functions now discharged by these Departments would be fulfilled in the event of the proposed abolition becoming an accomplished fact, we have not the least idea. The whole project seems vague in the extreme; so vague that one result of the reform (?) is described as a saving of twenty million *yen* annually, the total appropriation on account of the three Departments; from which estimate it may apparently be inferred that the abolitionists consider the three Departments wholly useless parts of the executive machine, and that in eliminating them they would not assign any portion of their duties to other officials. It is in the *Kokumin-no-Tomo* that we find the statement, and it seems to us worthy to be classed among the airy and impractical schemes that show how little the business of State administration is understood by some good folks.

### THE MINISTER PRESIDENT AND THE VICE-MINISTERS.

THE *Jiyu* has a story evidently taken from the repertoire where it keeps the pretty tales ventilated in its columns from time to time about Count Ito and others dignitaries of State against whom the Radicals entertain so strongly the proverbial grudge of the "outs" against the "ins." It asserts that the Minister President of State recently assembled all the Vice-Ministers of the Departments and made them a speech consisting of one platitude and two injunctions. The platitude was that officials should discharge their duttes with zeal and in such a manner as to assist their chiefs; the injuctions were, first that as the Government contemplates a large reduction of administrative expenditure this year, correspondingly increased activity will be required on the part of officials who remain; and secondly, that when the Diet meets and when Vice-Ministers have to appear before it, they must act so as to strengthen the Government. Count Matsukata is further alleged to have pointed out that the reduction of administrative expenditure would disarm the Diet's attacks in one direction, but that, inasmuch as the Government had already been assaulted with reference to the Otsu incident, it must expect to have this subject brought up again when Parliament re-assembles. The *Jiyu* speculates whether Count Matsukata's frequent references to the Diet are to be construed as an evidence of respect or of uneasiness, a somewhat trivial and profitless line of conjecture, we venture to think.

### THE PRESIDENT OF THE TOKYO RICE EXCHANGE.

IT may well be supposed that Mr. Nakamura, President of the Tokyo Rice Exchange, is the object of a great deal journalistic attention at present. Investigations into the state of his resources are said to have revealed that he had speculated in various shares to the amount of over fourteen hundred thousand *yen*, and that, in connection with these transactions, he had incurred losses amounting to seven hundred thousand. Mr. Nakamura must have been an ex-

Digitized by Google

ceedingly rash operator and phenomenally unfortunate into the bargain, if his operations on 'Change resulted in a loss of fifty per cent. all round. We cannot recall any class of Japanese securities which suffered such large depreciation as fifty per cent. during the past four years, but that appears to have been the average fate of all the scrip in which Mr. Nakamura had the misfortune to deal, if we may credit this report. Various other details of his property and circumstances are given, but it seems unnecessary to re-produce them in the context of a statement so obviously incredible as the above. Meanwhile, Count Okuma and Mr. Kabayama are said to be interesting themselves actively in order to effect a satisfactory arrangement of Mr. Nakamura's affairs, and the latest version is that a sum of less than seventy thousand *yen* will secure the Exchange against all loss. It will be remembered that from sixty to seventy thousand *yen* was the amount originally estimated by comparing Mr. Nakamura's available assets with the deficit said to exist in the funds controlled by him on account of the Exchange. There is therefore good reason to hope that this trouble, which threatened at first to be so serious, will be tided over without direct loss to the shareholders or brokers of the Exchange.

### FOREIGN MASTERS OF JAPANESE SHIPS.

THE fact that Japanese Steam-ship Companies employ foreigners to command their vessels in so many cases, is attributed by the vernacular press, not to the superior skill of the foreigner as a navigator, but to the greater confidence placed by foreign merchants in ships so commanded. A case illustrating this is quoted from the recent experiences of the Nippon Yusen Kaisha. After the loss of the *Takachiho Maru*, the Company placed the *Toshima Maru* on the Vladivostock line as a substitute. The latter vessel was commanded by a Japanese, Mr. Sakai Chiukichi, who seemed a thoroughly competent officer, and the Japanese residents of Vladivostock were prepared to find the service continued by the *Toshima Maru*. Subsequently, however, she was replaced by the *Higo Maru*, Captain Thompsen, and it was found that the cargo obtained by the latter vessel greatly exceeded that obtained by the former. No change in tradal conditions sufficient to account for such a difference had occurred, and an investigation into the cause was accordingly undertaken, with the result that the increase of cargo appeared unmistakably attributable to the greater trust placed by shippers in a vessel having a foreign master. It is therefore concluded that even an inferior foreigner is better, from a pecuniary point of view, than an inferior Japanese. We do not see why these adjectives should be employed in stating the verdict, but they accord, doubtless, with the spirit of the time."

### JAPAN'S FOREIGN POLICY.

THE *Minken Shimbun*, formerly the *Rikken Jiyu Shimbun*, gives an analysis of the sources of Japan's foreign policy. Count Kuroda, it says, is responsible for three parts; Viscount Yenomoto for two and a half; the Cabinet in a body, for four and a half; and the remainder emanates from Count Ito and the Electric Count, as Count Inouye is now called. What the "remainder" may be we should like to know, since without that knowledge it is difficult to discover how these figures are to stand as percentages. At any rate it seems to us that a grave omission has been made. Our contemporary ought surely to have added that journalistic imagination is responsible for about as many parts as the aggregate attributed to Count Kuroda, Viscount Yenomoto, and the Cabinet, taken together.

### THE "KAISHIN-TO."

THE *Kaishin* Party, according to the *Kokkai Shimbun*, seeing how utterly futile have been the attempts of the Radicals to shake the Cabinet, are resolved to concentrate their own forces against one particular Minister of State, instead of essaying to attack the whole body. It may well be supposed that since Mr. Tanaka Shozo wields considerable influence in the ranks of the *Kaishin-to*, the Minister selected as the object of the first onset is Count Goto. Next on the list of statesmen to be assailed comes Mr. Mutsu. Apparently the chief consideration dictating this course of action is that the eminent and influential Ministers of Satsuma or Choshu extraction do not present an easy mark for the missiles of their opponents. Such a consideration seems superficial, however, for the avowed aim of the opposition is to overthrow the *Sat-Cho* combination. The campaign now said to be contemplated is too vicarious to be admired.

### THE EMPEROR OF GERMANY ON STUDENTS' DUELLING.

THE Emperor of Germany's speech to the students of the Bonn University at the beer *commers* held to open the summer session, was as follow:—

It is my firm conviction that every youth who enters a corps or beer-drinking and duelling club will receive the true direction of his life from the spirit which prevails in them. It is the best education which a young man can get for his future life, and he who scoffs at the German students' corps does not penetrate their real meaning. I hope that as long as there are German corps students the spirit which is fostered in their corps and which is steeled by strength and courage will be preserved, and that you will always take delight in handing the duelling-blade. There are many people who do not understand what our duels really mean, but that must not lead us astray. You and I, who have been corps students, know better than that. As in the Middle Ages manly strength and courage were steeled by the practice of jousting or tournaments, so the spirit and habits which are acquired from membership of a corps furnish us with that degree of fortude which is necessary to us when we go out into the world and which will last as long as there are German universities. You have been good enough to refer to my son (the Crown Prince), and I give you my hearty thanks for doing so. I trust that the young man when he is advanced enough will matriculate here and join your clubs, and that he will then meet with the same kindly sentiments that were extended to me. And now a word to those young freshmen who are but beginning to lead a corps life. Train your courage, your discipline, and your obedience, without which we cannot as a State continue to live, and I trust that many officials and officers will emerge from your midst.

### GOLD AND SILVER RATIOS.

THE *Official Gazette* gives the following table of comparative values of gold and silver coins and of the pound sterling for the week ended the 20th inst., as derived from the returns of the Bank of Japan and the Yokohama Special Bank:—

| Day | Gold Coin. (Per *yen* 100) Siver Yen. | | Found Sterling (Per £1) Siver Yen. |
|---|---|---|---|
| 15th | 127.000 | A.M. P.M. | 6.2540 |
| 16th | 127.000 | A.M. P.M. | 6.2540 |
| 17th | 127.400 | A.M. P.M. | 6 2540 |
| 18th | 127.400 | A.M. P.M. | 6.2540 |
| 19th | 127.400 | A.M. P.M. | 6.2337 |
| 20th | 127.000 | A.M. P.M. | 6.1935 |
| Averages | 127.200 | | 6.2405 |

The above averages show for gold coin an increase in value of *yen* 0.567 per cent., and for the pound sterling a decrease in value of *yen* 0.0067 as compared with the previous week.

### THE BANK OF JAPAN.

THE amounts of convertible notes and reserves in the Bank of Japan for the week ended the 20th inst. were as follow:—

| Convertible Notes. | Yen. | Reserves and Securities. | Yen. |
|---|---|---|---|
| Notes issued | 93,988,536 | Gold coin and bullion. | 25,820,544 |
| | | Silver coin and bullion. | 21,904,694 |
| | | Public Loan Bonds | 13,470,450 |
| | | Treasury Bills | — |
| | | Government Bills | 22,000,000 |
| | | Other securities | 2,963,515 |
| | | Commercial Bills | 7,833,333 |
| | 93,988,536 | | 93,988,536 |

Of the above total issue of notes, the sum of *yen* 4,857,443 is in the treasury of the Bank, 22,000,000 has been transferred on loan to the Government, and *yen* 67,131,093 is in actual circulation, the latter showing an increase of *yen* 531,355 as compared with *yen* 66,599,738 at the end of the previous week.

### ARRIVAL OF FOREIGN HORSES.

THE steamer *Pemptos*, which arrived here recently, brought a pair of trotting stallions bred by Hornsby Bros., of Emminence, Kentucky, whose stud has some of the finest strains of trotting stock in America. One stallion is two and the other three years old. By the same steamer there came a handsome brown running-mare by the same breeders, six years old, the winner of several races; a span of large black driving horses, five years old, a 2.30 single trotting gelding, six years old, and a chesnut saddle horse. The stock was landed in good condition considering the long and stormy passage of 22 days.

### YOKOHAMA FIRE BRIGADE.

THE annual meeting of the Yokohama Fire Brigade is announced to be held on Monday next, when some important changes will probably be effected. We understand that an entire reorganization will be shortly brought about in the constitution of the brigade, and that a London fireman of experience, who has served for a number of years under Captain Shaw, has been engaged, and will shortly take over charge of the Fire Brigade in Yokohama. The only change to be regretted is the retirement of Mr. James Walter, who had rendered such valuable service to this community for a great number of years.

### NIPPON YUSEN KAISHA.

IMPORTANT changes are to be effected in the Nippon Yusen Kaisha, by which the services of the following foreign employés of the company will be dispensed with, and their posts given to Japanese:—Mr. S. D. Hepburn, manager of the Yokohama branch; Mr. F. Plate, manager of the Kobe branch; Mr. E. H. Duus, manager of the Nagasaki branch; and Mr. J. W. Graham, manager of the Shanghai branch.—*Jiji Shimpo*.

### SCHOONER ON THE BREAKWATER.

ON Thursday morning shortly after eight o'clock a small Japanese schooner, when making for the harbour, ran on the breakwater. The *Monocacy* sent a launch to ascertain if she was damaged, and found she was not making much water. The P. and O. launch tried to tow her off, but was unsuccessful. She was eventually got off at high tide in the afternoon after discharging her cargo (which was salt), and is now making but little water.

### BURGLARY.

AN attempt was made on Sunday night or early on Monday morning to rob the store of the London and New York Tailoring Co., No. 100. The thieves entered the workshop at the back, to which it is thought they gained access from the out-houses of the Parsonage. They were, however, foiled in their efforts to effect an entrance into the shop, so solaced themselves with two pairs of scissors and decamped.

### DEATH BY DROWNING.

ON Sunday morning at daybreak the dead body of M. Tansey, a saloon keeper, at No. 81, was found on the beach near the boat-house. The face was cut a good deal, probably from the body beating on the stones, and one shoe was missing, the body otherwise being fully dressed. The deceased, we learn, was seen on Saturday night at ten o'clock near the Grand Hotel.

### OFFICIAL APPOINTMENTS.

MR. HIRAYAMA NARINOBU, Private Secretary of the Minister of State for Finance and of the Minister President of State, has been appointed Chief Secretary of the Cabinet, *vice* Mr. Su, who proceeds as Governor to Hyogo; and Mr. Yamawaki Gen, a Councillor of the Legislative Bureau, has been gazetted chief of that Bureau.

### A PLUCKY CANTONESE WOMAN.

IT was reported at Kiukiang that the Cantonese wife of Mr. Green, the Custom House officer at Wusueh, defended her home with a Japanese sword, and killed four of the Chinese assailants before she was herself overpowered and murdered.—*N. C. Daily News.*

RESIDENTS on the Bluff complain of the importunities of two foreigners, who are supposed to be collecting money for some religious order, but they do not make themselves well understood nor do they appear to have any consular or other recommendation to the consideration of the charitable, and their manner and appearance are very much against them.

A KOBE telegram to the *Jiji Shimpo* reports that Tsuda Sanzo will be conveyed from that port on the 24th instant to Sorachi in the *Wakanoura Maru*.

## *MR. OKI MORIKATA.*

THE EMPEROR has been pleased to pardon Mr. OKI MORIKATA, who was removed from his post as Governor of Shiga Prefecture in consequence of the Otsu outrage. In the *Official Gazette* a brief intimation of the act of clemency is made through the Minister President of State. It will be remembered that the CZAREVITCH twice intervened on behalf of Mr. OKI, and that, on the second occasion when travelling with the EMPEROR by train from Kyoto to Kobe, His Imperial Highness urged that Governor OKI, having been but a few hours in office when the outrage was committed, could scarcely be held responsible. To this the EMPEROR replied that however short an official's tenure of office may have been, he must bear all the responsibilities of his position. Nevertheless, there can be no doubt that the request of the CZAREVITCH carried weight, for whereas not only the removal of Governor OKI but also his degradation are understood to have been originally contemplated, the latter punishment was ultimately omitted. According to the *Mainichi Shimbun*, the CZARÉVITCH did not confine his kindly efforts to these two interventions. He also instructed the Russian Representative to take an early opportunity of addressing HIS MAJESTY again on the subject, and our contemporary refers the pardon now gazetted to the efforts of M. SCHÉVITCH. Next to the act of TSUDA SANZO himself no incident of the whole affair produced such a painful impression on the foreign public as the removal of Governor OKI, and we are extremely reluctant to accept the explanation now offered by the *Mainichi Shimbun*. It is far more satisfactory to assume that the removal of Governor OKI was, from the first, a mere formality, and that no intention existed of allowing the unhappy incident to injure his official career. We are unable to perceive any principle of justice in accordance with which responsibility for TSUDA'S crime could be imposed on the Governor of the Prefecture where the affair occurred. Had Mr. OKI been ten years Governor of Shiga, instead of ten hours, there would have been the same difficulty in connecting him with the act, though his punishment might have appeared less startling. In China, indeed, the principle of administration suffers no discrimination to be exercised in regard to the responsibility of local officials towards the Central Government, but the Chinese system provides peculiar compensations in other respects, and people cannot fail to be surprised that in Japan, where these compensations do not exist, the bonds of responsibility should nevertheless be drawn with Chinese rigour. Despite the *Mainichi Shimbun's* analysis, we are disposed, therefore, to conclude that Governor OKI'S official pardon would have been granted as a matter of simple justice. At the same time the kind offices said to have been exercised by the CZATEVITCH and the Russian Representative are worthy of the forbearance and friendliness exhibited by Russia throughout this affair. What has to be now regretted is that the pardon of Mr. SAITO, the Chief of the Shiga Police, continues deferred. Had there been any tittle of evidence to show that TSUDA SANZO'S condition was such as to suggest doubts, however slight, of his trustworthiness or sanity, the Chief of Police might fairly be held responsible for not having entertained and given effect to these doubts. But TSUDA was in every respect an exemplary official. Self-contained, attentive to duty, thrifty and uniformly sober, with fifteen years' service and a decoration for bravery in the field, he was precisely the man to be chosen for a duty of the nature assigned to him on the 11th of May. No chief would have been justified in distrusting such a subordinate. That the Chief of the Shiga Police should have been deposed and degraded for trusting him, is a mystery not to be solved by any ordinary process of reasoning, or reconciled with any common principles of justice. We would fain see the unfortunate Mr. SAITO restored to the office which he had reached by patient and meritorious services, and from which he was degraded in consequence of an incident beyond human sagacity to foresee or prevent.

## *COUNT OKUMA AND THE "KOKKAI."*

WITH singular persistence the *Kokkai* continues its attacks upon Count OKUMA. It commenced the campaign by asserting that the Count, when he presided over the Foreign Office, purchased large quantities of land in view of the accomplishment of Treaty Revision, which event was expected by ignorant people to exercise a strong influence on the price of real estate. Treaty Revision having failed, however, the anticipated appreciation of values did not ensue, and land having since then fallen steadily owing to general commercial depression, Count OKUMA, according to the *Kokkai*, found himself some five hundred thousand *yen* to the bad. The patent absurdity of supposing that a statesman so thoroughly acquainted with the situation as Count OKUMA, could be led away by the silly fancy that the inauguration of mixed residence would materially effect the price of land, probably became plain to the *Kokkai* after a time, for it changed its ground, and has now published a story the gist of which is that Count OKUMA made a heavy loss by speculating in shares of the *Nippon Yusen Kaisha*. We learn for the first time from the columns of the *Kokkai* that the Mexican Government offered a subsidy of a million and a half dollars annually to the Japan Mail Steamship Company provided that the latter would establish a line of steamers between this empire and Mexico. Everybody except the *Kokkai* must be astonished by this intelligence. Count OKUMA, however, is supposed to have known it in 1889, and to have bought a number of the Steamship Company's shares at their highest figure, 96, expecting that when the Mexican subsidy came to be received the shares would rise twenty or thirty per cent. Such statements in the columns of a leading Japanese newspaper make one rub one's eyes in amazement. The truth about the Mexican affair, as all those directly concerned in it are well aware, was that the Mexican Government originally offered to subsidize a line of steamers between Mexico and the Orient, touching at Japan, provided that the ships were Mexican vessels flying the Mexican flag, and provided that the service was started within two years. Out of this offer there grew an unofficial proposal to Japan which turned out to be a mere fiasco, and which never impressed serious people in the slightest degree. Subsequently another project was mooted in this country, its basis being the chimera that Mexican silver would come to Japan to be minted if ships were available for its transport, but we need scarcely say that this scheme found its way immediately to the Foreign Office pigeon-holes. It will be seen, therefore, that the foundation of the *Kokkai's* tale is a pure myth. A double-barrelled story of such a nature is convenient, for while, on the one hand, it enables the *Kokkai* to represent Count OKUMA as a wild speculator crippled with debts, it provides, on the other, a weapon for attacking the Government, since the latter is charged with endeavouring to destroy Count OKUMA politically by urging the Bank to which he is indebted to press him mercilessly for payment. So far, indeed, does the *Kokkai* carry its disingenuous rôle that it pretends to remind the Cabinet Ministers of their old relations with Count OKUMA, and to upbraid them for cruel conduct toward a man who worked hand and glove with them twenty years ago. What is to be said of such journalism? Hardly, we think, in the whole history of Japanese newspapers are there to be found two incidents so disgraceful as the *Nippon's* action in the TEI affair and this reckless attempt of the *Kokkai* to traduce Count OKUMA. The Count himself can afford to treat a slanderer so extravagant with quiet contempt, but surely that cannot be a wholesome state of affairs which permits newspapers to exercise license of such a gross and unprincipled character. We are constrained to think that the *laissez-faire laissez-aller* principle is carried too far in Japan. It is certainly an excellent habit in many respects to go through the world minding one's own business and leaving other folks to settle their own. But the principle, pushed to ex-

Digitized by Google

tremes such as it seems to reach in Japan, is inconsistent with the growth of anything like active and wholesome public opinion. It leads inevitably to a state of indifference and narrowness of moral vision, among the results of which are the toleration extended to the *soshi* and the apathy shown towards escapades like those of the *Nippon* and the *Kokkai*. If people had a larger conception of their responsibilities as units of the nation and of society, they would not suffer over-grown school-boys to convert the political arena into a Donnybrook Fair, neither would they be content to shrug their shoulders and pass on the other side of the way when a newspaper deliberately sets itself to traduce a public man. It is true, indeed, that in the presence of this *insouciant* mood libels like those of the *Kokkai* produce a correspondingly trivial effect. But moral anæsthesis, however convenient it may be under certain circumstances, is essentially characteristic of inferior beings. In Japan's wholesale process of grafting the new upon the old, some anomalies are bound to make their appearance, and newspapers should labour to remedy this state of affairs instead of regarding it as an opportunity for license.

## *THE JAPANESE GOVERNMENT AND THE OTSU INCIDENT.*

IN a recent issue we had occasion to allude to an extraordinary tale circulated by an English local journal of Kobe with reference to action falsely attributed to the Russian Representative in Tokyo. In making the correction we expressed surprise that any journalist should employ his columns for the purpose of publishing stories the effects of which can only be mischievous, and the details of which are obviously inconsistent with reasonable probability. A feeling of still greater astonishment is excited by an article published on the 23rd instant in an English newspaper of this Settlement. The purpose of the writer is to prove that, in dealing with the complications growing out of the Otsu affair, the Japanese Government showed culpable indifference to the national dignity, and the Russian Representative marked unconcern for the friendly relations between his country and Japan. The attempted demonstration is founded on two classes of arguments, expressions of opinion and statements of alleged facts. To the former category belong assertions that the Emperor of Japan "waived his dignity" when he proceeded from Tokyo to Kyoto to visit the wounded CZAREVITCH, and that HIS MAJESTY "sunk the proper dignity pertaining to the occupant of a throne" when he consented to lunch with the Russian PRINCE IMPERIAL on board the latter's ship. Both of these incidents are described in language plainly intended to bring the acts of the Japanese Sovereign into contempt. We are told that HIS MAJESTY "bustled down to Otsu to wait upon the young Russian PRINCE," and that when the EMPEROR invited the CZAREVITCH to partake of his hospitality, "HIS MAJESTY'S proferred civility was declined, and he was informed instead that the PRINCE would entertain the SOVEREIGN of Japan at tiffin afloat." Writing so reckless of effect and so careless of truth needs no explicit condemnation. That the EMPEROR of Japan should have proceeded in person to visit his Imperial guest, who had been the victim of a cruel outrage within HIS MAJESTY'S dominions and while guarded by HIS MAJESTY'S officials, was an act of common humanity, to say nothing of the dictates of hospitality or the promptings of international amity. To have remained coldly in Tokyo under the circumstances would have been to fail altogether in the duties of civilized intercourse, and none would have been louder in their denunciations of such discourteous apathy than the critics who now pretend that the standard of kingly dignity has been lowered by the gracious act of a humane and hospitable sovereign. As for HIS MAJESTY'S visit to the CZAREVITCH on board ship, it has already been officially stated that the medical advisers of the wounded PRINCE forbade him to undertake the fatigue and excitement of landing. If the Imperial host and his guest were to meet again before the CZAREVITCH left Japan, the only course was for the EMPEROR to accept the PRINCE'S hospitality, and we can only marvel at the singular bias which professes to consider that the prestige of the Throne was compromised by a choice so natural and so kindly as that made by the EMPEROR under these conditions. It was by no means the first occasion of HIS MAJESTY'S visiting foreign Princes on board their ships in Japanese waters, but even though no precedents existed, the nature of the case would have amply warranted exceptional procedure.

Turning from expressions of opinion to statements of alleged facts, we find several astounding assertions, as that the Japanese Minister of Foreign Affairs was most unceremoniously refused audience of the CZAREVITCH when he had journeyed expressly from Kyoto to Kobe to pay his respects to the PRINCE, and that the Russian Representative in Tokyo subsequently procured the removal of the Minister by declining to continue diplomatic relations with him. On the strength of this evidence the Japanese Government is accused of "pusillanimity in sacrificing Viscount AOKI to propitiate the Russian Envoy," and the Russian Representative is held up as behaving in a manner inconsistent with every acknowledged principle of international etiquette. Few persons will be found, we imagine, to credit such obviously wild canards, and fewer still to approve of the conduct of a foreign newspaper published in Japan which deliberately endeavours to bring the Sovereign of the country into contempt, to injure the friendly relations between this State and a neighbouring empire, and to educate among the people discontent and umbrage against their rulers.

## *THE ERI SILK OF ASSAM.*

AS everything relating to silk is of interest in this country, the record of the efforts being made by the local government of Assam to improve and bring into commercial favour the peculiar silk known as *eri* silk, cannot fail to attract attention here as elsewhere in countries in which silk is a staple. A report of Mr. DARRAH, the Director of the Agricultural Department of Assam, published recently at Shillong, places several facts at our disposal. The report itself is a lengthy and ill-digested document, as such official publications, especially in India, have a knack of being; but the gist of the whole will be found in the following abstract.

The *eri* silk of Assam is the product of a polyvoltine worm known as the *philosamia ricini*, which feeds on the castor-oil plant and the *keseru* tree (*heteropanax fragrans*). The worm derives both its scientific and its vulgar name from its attachment to the castor-oil plant called *eri* in Assamese, and is reared entirely indoors. The castor-oil plant grows abundantly in the ryot's garden, springing up from dropped seed in every little patch of unoccupied land around his house. The tending of the worms devolves principally upon the women of the family, and goes on all the year round. As many as eight broods can be obtained in twelve months, but the number actually reared never exceeds five or six, and depends a good deal upon the quantity of food which chance has provided, since no care is taken to ensure a supply by planting out trees. The autumn, winter, and spring broods, spinning their cocoons in November, February, and May respectively, are chiefly destined for use, and of these the spring cocoons are the most numerous, and yield the largest quantity of silk. The broods of the rainy months are reared for the purpose of perpetuating the stock. But both breeding and spinning, to a greater or less extent, go on all the year round. Cocoons reserved for breeding are placed in a round basket woven of bamboo, with a narrow mouth, and are hung up in the house out of the way of rats and insects. After about 15 days in the hot season, and 20 to 30 days in the colder months, the moths emerge, and are allowed to move about in the basket for four-and-twenty hours. The females, distinguished by their larger body and broader and flatter abdomen, are then tied to pieces of reed or *ulu* grass by a ligature passing under the shoulder joint of a pair of wings on one side of the body only, leaving the pair of wings on the other side free. The moths will thus be tied to a

Digitized by Google

piece of reed two feet long. The males, though left at liberty, do not attempt to fly away, but remain with the females, to which they have attached themselves, until the latter have laid their eggs, when the males depart. If some of the females, as may easily happen for want of any criterion of sex in the cocoon, are unprovided with males, they are exposed on the eaves of the house in the evening, and are visited by any stray males that may be in the vicinity. The female lays about 200 eggs in three days, and the life of the moth lasts a day or two longer. The eggs are picked off the straws, wrapped in a piece of cloth, and hung up in the house. The period of hatching varies according to the season: with an average temperature of 83° F., it has been found not to exceed a week, but in the winter it is about 15 days, and in the months of medium temperature 9 or 10 days is the usual term. When the eggs begin to hatch, the cloth is opened, and tender leaves of the castor-plant, previously crushed between the fingers to render them still softer, are supplied to the young worms for food, and subsequently they are transferred to a bamboo tray suspended in a place of safety. As the worms grow stronger, older leaves are given to them. Their supply of food is occasionally intercepted by swarms of caterpillars appearing on the castor-oil plant about June. It is at seasons like these that the leaves of a variety of trees are used as substitutes for the favourite food of the worm. Large numbers of worms are lost by disease, of which neither the nature nor the remedy is known, but which probably has its origin in uncleanliness. The native account of the disease is simply that the worm ceases to eat and withers away. The ichneumon fly is a deadly enemy. Its bite, which leaves a black mark, usually proves fatal to the worm at the next moulting; and if the wound has been inflicted after the last moulting, the worm spins a smaller cocoon, and dies before it is completed, leaving the eggs of the fly to hatch inside the cocoon. Rats are still more destructive, sometimes sweeping off an entire brood in a single night. The number of moultings is four. The caterpillar is first about a quarter of an inch in length, and appears of a blackish yellow colour. As it increases in size, it becomes orange with small black spots on each of the twelve rings which form its body. The head, claws, and holders are black; after the second moulting, they change to orange; and the colour of the body gradually becomes lighter, in some approaching to white, in others to green; the black spots also gradually approximate to the colour of the body. After the fourth or last moulting, the colour is a dirty white or a dark green. After the final moulting, the worms are transferred from the tray to forked twigs of the castor-oil plants, with the leaves on suspended across a piece of reed. As the worms attain maturity, they cease to feed, and crawl to the top of the fork; and if held up to the ear, and gently rolled between the fingers, their bodies emit a crackling or rustling sound. They are now placed on a bundle of dried plantain-leaves, or branches of trees with the withered leaves attached, and this also, like the feeding-tray, is suspended from the roof within doors. Here they begin to spin, usually on the same day, and not unfrequently two worms will select the same leaves as their covert, and join their cocoons together. The time occupied in spinning is three to six days. A complete cycle of the insect may be as long as twelve weeks in winter, or as short as six weeks in summer, while in the intermediate months it varies between these extremes. The dimensions of a full-sized cocoon are about $1\frac{1}{6}$ inch in length by $\frac{3}{4}$ inch in diameter. The cocoon without the chrysalis weighs five grains. It is destitute of floss. Its proper colour is white, but a large proportion of the cocoons are of a dark brick-red colour, for which it is difficult to account. Worms of the same brood, fed on the same leaves, will produce dark and light cocoons indifferently. The dark colour can be purged away by boiling the cocoon in alkali water. It is said that in some places where cocoons are sold the white cocoons are sorted out, and command a higher price. There is reason to believe that, with proper care in providing the worms with suitable shelter for spinning, the proportion of white cocoons could be increased, and the quality also of the silk could be improved. In preparing the cocoons for use, the first step is to destroy the life in the chrysalis. For this purpose exposure to the sun during one or two days is usually sufficient, and this is the method preferred by the cultivators as enabling them to keep the cocoons longer, and avoiding the discolouration which is caused by fire. When fire has to be employed, it is applied under bamboo trays, upon which the cocoons are placed. Cocoons intended for immediate use are boiled for two or three hours in an alkaline solution of the ashes of the plantain stem in water, which serves the double purpose of killing the chrysalis and softening the cocoon. Usually, however, the cultivator keeps his cocoon until he has a stock sufficiently large to make it worth his while to begin to spin. He then boils them in this solution. In this way cocoons several years old, if they have been kept uninjured, can be softened and rendered capable of spinning. After this process, the cocoons are opened, and the chrysalis is extracted; they are next washed white, slightly kneaded in the hand, dried in the sun, and are then ready for use. The *eri* cocoon has been successfully reeled in Italy, and experiments have shown that it can be reeled in India, but the only method employed by the cultivator is that of spinning off the silk by hand. At the time of spinning, the empty cocoons are placed in an earthen bowl containing water, with which a little cowdung is sometimes mixed. Each cocoon is taken up separately, and the silk is drawn off in a coarse thread, nearly as thick as twine. Uniformity of thickness is roughly preserved by rubbing the thread between the finger and thumb, and in this way also new cocoons are joined on. It is said that six spinners can spin about 8 oz. of thread in a day, consuming 1,200, to 1,500 cocoons. The most important fabrics woven from the thread are waistcloths and sheets. The latter are large pieces of cloth about 6 to 7 yards long, by 4 to $4\frac{1}{2}$ feet in width, and their price varies from Rs. 7 to Rs. 20, according to quality. The cloth is often extremely coarse, and of a dark colour and open texture, but it is always very durable, and the texture grows closer by weaving, as the nap or floss rubbed off the thread serves to fill the interstices. A superior piece of *eri* cloth, on the other hand, is nearly as white as linen, and fine enough to make a travelling dress for a lady. One excellent quality of these fabrics is their exceeding durability. An ordinary piece of cloth is reckoned to last thirty years. Until recently the trade was mainly local in that region of India, but it now extends to England, where the demand is increasing, owing to the discovery of machinery adapted for utilizing the cocoon, which practically cannot be reeled, but must be spun.

Since 1886 successive experiments have been made at the expense of the Government to make *eri* silk a commercial commodity. Mr. DARRAH says he is of opinion that the silk has great possibilities, although all these experiments have failed. He believes the culture can be conducted on a commercial scale, and that the time will come when much capital will be embarked in it, and when it will form one of the most important staples of Assam. The climate is ideal for the growth of silk. The food of the worm is almost a weed in many parts of the province, and actually a weed in others. The worm is exceedingly prolific and the labour required for rearing it is such as can be given by decrepit and infirm members of the community. This sort of labour exactly suits the Assamese, to whom even the light work of a tea-garden is repugnant. The produce required needs no skill in the handling; reelers are not wanted; nothing but the empty shell from which the chrysalis has been extracted or the moth has escaped is asked for in England, and for this commodity the demand far exceeds the supply. It is difficult to imagine a combination of circumstances which promise better for the commercial success of any commodity, and if a small amount of capital were to be invested in this enterprise by a man who was prepared to watch closely all details, to live on the spot with his castor-oil plants, to record

Digitized by Google

carefully all facts, however unimportant apparently, connected with his experiment, there is no doubt that he would inaugurate an industry capable of rendering profitable again the land of many an exhausted tea-garden in Assam. For this purpose Mr. DARRAH gives various detailed directions with which, however, we are not concerned here.

## *CORRESPONDENCE.*

### THE ASIATIC SOCIETY OF JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Some time ago there appeared in the *Mail* a severe criticism of a letter written by a Japanese lawyer in reply to the printed requests for information about land-tenure issued under the auspices of the Asiatic Society.

The discourtesy of the reply was, in my humble opinion, entirely justified. The Society has issued a demand that three hundred complicated legal questions be answered, that maps and documents of all sorts be collected and forwarded, that manuscript, to the amount of many hundred folio pages, be written for their benefit—without one cent of compensation, except a mention of the worker's name. However praiseworthy the object of the undertaking, the methods followed seem to me both logically and morally unjust. I certainly should never dream of asking any Japanese to do one hundredth part of the work without ample compensation. Some of the information demanded, such as the personal history of Daimyōs, would require much research and time. Nor is it reasonable or right to ask for maps and legal documents from the Japanese without paying for them. Irritable answers to such requests may be naturally expected; and the making of such requests, in the name of any society, however learned, is apt to create in Japanese minds an exaggerated idea of foreign selfishness, and little respect for the Society itself.

I am, Sir,

ONE WHO RECEIVED THE CIRCULAR.

June 15th, 1891.

### CHRISTIAN "SCIENTIFIC" METHODS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Mr. Tyng, in his reply to my criticisms on Professor Howard, seems to misapprehend the points I put with reference to the writings of the early Fathers and their bearing upon New Testament criticism and Christian "evidences," and it may be well to restate the argument briefly as follows:—The New Testament, the story of Christ, and the doctrines associated therewith, are, in the opinion of competent scholars, compilations from many sources, and developments or corruptions of older philosophies, in which Greek and Hebrew learning mingled with legend and tradition, and became the foundation of a system and a literature which only took form and shape as we now have it at the end of the second century; and especially that our Four Gospels were not the work of the writes whose names they bear, but were compiled at a much later date from earlier and varying authorities who are continually referred to by the early Fathers. Only by this means it is considered possible to account for the many and diverging characteristics of what ultimately came to be called Christianity.

It used to be held that the nearer we got back to the supposed days of Christ, the nearer should we be to beholding what the Church of Christ ought to be, and Christian sects have sometimes prefixed the word "primitive" to their distinctive names, apparently quite in ignorance that "primitive" Christians differed far more in essentials from each other than do the most diverse sects of Christians to-day.

Mr. Tyng seems to think that if he can produce from the early Fathers a certain number of quotations *more or less resembling* our present Gospels, he thereby establishes the fact that those early Fathers were acquainted with our New Testament in its present form, whereas they really prove something very different—namely, that as these quotations differ sometimes most strikingly from our existing Gospels, the writers were evidently quo- and quite different authorities.

will best explain what I mean.

at Shakespeare in constructing

h of the work of historians who

ularly Holinshed's *Chronicles*, in some instances simply casting the actual language of his authorities into poetic form. Now suppose we were to find a writer of the sixteenth century quoting from an unknown source a phrase or incident which Shakespeare, with a few verbal alterations, had incorporated into one of his works, would "one or two coincidences" or "points of resemblance" be a proof that the sixteenth-century writer was acquainted with the works of the seventeenth-century Shakespeare? The answer is easy as regards Shakespeare simply because we have contemporary evidence for the period in which he lived; yet it is quite within the bounds of probability that contemporary evidence may in the course of ages disappear, and the question as to what century his works belong may have to be settled by the very method in which criticism is now settling the age of the writings in our New Testament.

But on Mr. Tyng's method, we should then decide that Shakespeare must have preceded the sixteenth-century writer who has "one or two coincidences" or "points of resemblance" with him. Thus he quotes certain words of Athenagoras which that writer refers to the "Logos," and which taken by themselves seem to be quotations from the New Testament, but omits to mention that in the same work Athenagoras cites other sayings of the "Logos" which differ materially from or are not to be found in our Gospels. For example, Mr. Tyng quotes from Athenagoras and refers to Matt. v. 28, the sentence, "For he that looketh on a woman to lust after her hath committed adultery already in his heart." Standing by itself, this certainly looks like a quotation; but then Athenagoras continues, "The Logos again says to us, 'If any one kiss a second time, because it has given pleasure, he sins,' adding, "Therefore the kiss, or rather the salutation, should be given with the great care, since if there be mixed with it the least defilement of thought, it excludes us from eternal life.'" Is this also a quotation from the New Testament?' If not, why should the first sentence quoted be referred thereto? Surely it is clear that Athenagoras was quoting from an authority which, though certainly not our present New Testament, may very probably have have been one of the writings upon which it was based; but if this be admitted, away goes the claim that our present gospels are either divinely inspired or written by the men whese names they bear.

I do not suppose Mr. Tyng will deny that there are Gospels quoted by name by the early Fathers which, though they have not survived, yet seem to have been regarded with equal reverence to that paid to-day to our present Gospels. As the author of "Supernatural Religion" says, even slight variations are very important in connection with the question as to the source from which quotations are derived, and he gives as illustrations the following:—"The passage, 'See thou say nothing to any man, but go thy way, shew thyself to the priest,' occurring in a work like the Homilies, would, supposing our second Gospel no longer extant, be referred to Matthew VIII. 4, with which it entirely agrees, with the exception of its containing the one extra word 'nothing.' It, however, actually corresponds with Mark I. 44, though not with our first Gospel. Then again, supposing that our first Gospel had shared the fate of so many others of the πολλοὶ of Luke (I. 1), and in some early work the following passage were found: 'A prophet is not without honour except in his own country and in his own house,' this passage would undoubtedly be claimed by apologists as a quotation from Mark vi. 4, and as proving the existence and use of that Gospel. The omission of the words 'and among his own kin' would, at first, be explained as mere abbreviation, or defect of memory; but on the discovery that part or all of these words are omitted from some MSS., that, for instance, the phrase is erased from the oldest copy known, the Codex Sinaiticus, the derivation from the second Gospel would be considered as established. The author, notwithstanding, might never have seen that Gospel, for the quotation corresponds with Matthew xiii. 57." It is thus perfectly evident that if we only apply to these references of the early Fathers the same method of reasoning which would most certainly be applied to them if Christianity did not have to be defended, very different conclusions would be reached by unprejudiced thinkers to those put forward in order to bolster up the historical claims of Christianity.

As regards Tatian, Mr. Tyng points out that the *Diatessaron* (of which Eusebius says, "Tatian having formed a certain collection of gospels, I know not how, has given it the title *Diatessaron*, which is in the possession of some even now") has recently (1888) been discovered in an Arabic translation, and has been published in Rome by Ciasca, and twits me with my ignorance thereof. Well, I am not ashamed to say that the discovery was unknown to me; nor, under the peculiar conditions of life in the East, where one is without the many channels through which at home such information reaches one, do I think it any disgrace that I was unaware of this particular discovery; and I should be obliged to Mr. Tyng if he will kindly refer me to authorities or quarters where I can obtain further information. Since writing my previous letter to the *Japan Mail*, my attention has been drawn to the fact that though, so far as I have had an opportunity of consulting them, English authorities appear to be silent on the point, Brockhaus' *Conv.-Lex.*, under the heading "Tatianus," says:—"Under the name *Diatessaron* he wrote the oldest Gospel Harmony, which through the medium of Ephraim the Syrian's Commentary—still existing in the Osmanic language—has been handed down to us nearly complete (*cf.* Mösinger, 'Evangelii concordantis expositio facta a S. Ephremo,' etc., Venice, 1876)." ("Er verfasste unter dem Namen *Diatessaron* die älteste Evangelienharmonie, welche durch Vermittelung des in osmanischer Sprache ehraltenen Kommentars von Ephraim dem Syrer ziemlich vollständig auf uns gekommen ist.")

From the meagre references given by Mr. Tyng, however, it is somewhat difficult to determine the precise value to be attached to the "find," for a "life of Christ formed by weaving together into one narrative the four Gospels" might prove to have as its real foundation the same authorities from which our present Gospels have been compiled. As to its "beginning with the opening part of the Gospel of St. John," the "one or two coincidences" of Mr. Tyng's other authorities have been shown to be so far from conclusive that I hope I may be pardoned for asking "more light" here; for in the admitted work of Tatian which has come down to us, the "Address to the Greeks," he commences in somewhat similar fashion to that of the fourth Gospel: "The Logos, begotten in the beginning, begat in turn our world, having first created for himself the necessary matter," and Mr. Tyng, on the same principle with which he deals with other "coincidences," is no doubt prepared here also to recognise a distinct quotation from the fourth Gospel, a conclusion which can hardly be admitted when the striking variations are considered.

Mr. Tyng thinks it surprising that any one should put forward a theory that in the second century there were Christians who had never heard of Jesus Christ. But the theory is neither very new nor very improbable, for there are many reasons for believing that what is now called Christianity was a combination of many various systems, in some of which the "Logos" mentioned by Philo occupied the place afterwards assigned to Christ. Mr. Tyng himself admits that Athenagoras and Theophilus, while calling themselves Christians, refer only to "God," "the Logos," and "Son"; and though he does not say so, surely he must himself find it surprising that these two professed Christians do not refer specifically to Jesus Christ. And it is still more curious that one of them, Theophilus, should actually give a definition of Christianity which quite omits mention of Christ altogether. The passage is so remarkable as to be worth quoting in full. It occurs in a defence of Christianity addressed by Theophilus to his friend Autolycus:—"About your laughing at me, and calling me 'Christian,' you know not what you are saying. First, because that which is anointed is sweet and serviceable, and far from contemptible. For what ship can be serviceable and seaworthy, unless it be first anointed with oil? Or what castle or home is beautiful or serviceable when it has not been anointed? And what man, when he enters into this life or into the gymnasium, is not anointed with oil? And what work has either ornament or beauty, unless it be anointed and burnished? Then the air and all that is under heaven is in a certain sort anointed by light and spirit; and are you unwilling to be anointed with the oil of God? Wherefore we are called Christians on this account, because we are anointed with the oil of God." ("Primitive Church History," p. 14). Truly, if it is difficult to realise the play of "Hamlet" with the part of *Hamlet* omitted, it is more difficult to realise a Christian giving a fairly long definition of Christianity in which there is no mention of Christ, if his creed were founded either upon our New Testament or upon the teaching of the personage whose words and actions are recorded in our Gospels.

Mr. Tyng concludes his letter by saying that the author of "Supernatural Religion" has been effectually answered by Bishop Lightfoot, and quotes the opinion of a reviewer in the New York *Nation* that the Bishop has shown the author of "Supernatural Religion" to be wanting in scholarship. Of course the writer in the *Nation* has a right to his opinion, but it is by no means impro-

Digitized by Google

bable that he is a cleric, and so biassed, as I happen to know that some of the leading reviews employ clergymen to deal with these subjects in their columns; but however this may be, it is very amusing to notice that while every fresh answer to the author of "Supernatural Religion" is always considered perfectly conclusive—by the orthodox—the defenders of Christianity become so doubtful after a short time as to whether it really is annihilated by the latest clerical bombshell, that they go on replying to it year after year. Bishop Lightfoot, it appears, conclusively answered the author of "Supernatural Religion" in 1889, and yet in the very next year the Rev. H. W. Watkins, M.A., D.D., finds it necessary to devote considerable space in the "Bampton Lectures for 1890" to a further reply, in which he classes the writer of that book with critics such as Scholten, Tayler, Abbott, Davidson, Martineau, and Delff. It reminds one of the fashion in which Thomas Paine was for fifty years periodically "annihilated" by some great cleric or other, while much of his criticism, notwithstanding the incomplete materials to his hand, is perfectly unanswered even to-day.

However, it is worth while to note that Mr. Tyng's reply does not after all deal with my principal criticism of Professor Howard's methods; and I am even inclined to think that Mr. Tyng himself agrees with me that the lecture was at least improperly entitled "The Christ Judged by *Scientific* Methods," for surely it is very far from scientific to put forward, as if unchallenged, quotations which have been shown on very good authority to be forgeries. Professor Howard may of course regard the passages he quotes as genuine, but as a matter of honesty he should at least have stated that competent scholars have held otherwise.

I notice in yesterday's *Japan Mail* another—well, I was going to say "reply" to my remarks on Professor Howard's lecture, but I have already called Mr. Tyng's letter by that term, and it would be grossly insulting that gentleman to place his remarks in the same category as those appearing yesterday. I do not know whether Professor Howard will be flattered at the support there given him, and I very much doubt whether the editor will feel complimented in having Professor Howard's lecture rated as the "best thing" ever seen in "the *Mail*." It would be interesting, also, to know what an educated man like Mr. Tyng thinks of his ally, for if "a boy twelve years old that has ever read his first book of history and a monthly magazine" were to try and display his scholarship by signing himself "A. Amor Veritas" he would come very near a whipping for perpetrating such shocking "dog-Latin."

Yours truly, SECULARIAN.

Kobe, June 14th, 1891.

## "A STRANGE CASE" OF NEWSPAPER CRITICISM.

To the Editor of the "Japan Mail."

Sir,—I notice in the leading article of the *Japan Gazette* of last night a criticism of a law case recently decided by the Fukuoka Juzai Saibansho in accordance with an order of the Court of Cassation. The criticism seems *fair so far as it goes:* but what I call "strange" is that it is stated towards the end of the very article that "It is an unfortunate circumstance for Japan that the proceedings in her courts of justice are not more fully published, as the scanty details which are ventilated in the native papers are certainly more likely to do the country harm than good. *The courts in question may possibly have both been perfectly justified in their decisions, but without knowing more of the facts than has been so far published, foreigners may be excused if they arrive at wrong conclusions as to the present condition of Japan's Judiciary, and the equity with which 'justice' is meted out to her people.*"*

Now, I should like to ask you if the duty of an editor of the newspaper press of your nation—an institution which, I am quite prepared to admit, is superior to our own, at least in respect of age—is according to your idea fulfilled by passing comments seriously in a leading article on a law case like the one in question, on the acknowledged basis of a scribbling and di-jointed report appearing in an ordinary political journal, without taking the trouble to study the facts and evidence adduced in the case, which could doubtless be very easily procured by reference to the Japanese law journals of which there are more than one published? If this is so according to your idea, I am afraid that my countrymen, who are ever ready to credit and admire your various institutions, will begin to place but very little value upon at least one of them—the newspaper press—and will at best conclude that its conductors have a very unfair and unbusiness-like way of treating an important subject relating to a friendly nation.

I am, Sir, your obedient servant,

A JAPANESE STUDENT.

Tokio, June 25th, 1891.

* The Italics are my own.

## "SECULARIAN."

To the Editor of the "Japan Mail."

Sir,—"Secularian," in your issue of yesterday, seems to credit me with a larger attempt than I really made. I did not try to establish the fact that the early Fathers were acquainted with our New Testament in its present form? The quotations I gave were a very small part indeed of the evidence producible by any one who seriously made such an attempt. They would perhaps be sufficient, even if we did not have evidence from Clement and Polycarp and Ignatius, from Papias and Justin Martyn and many other sources. But my purpose in producing them was simply to show that "Secularian," in asserting so dogmatically that Tatian, Athenagoras, and Theophilus do not mention either Jesus Christ or the New Testament, was not quite so strict in his "scientific method" as he wished others to be.

I was very far also from wishing to twit "Secularian" with ignorance of the discovery of Tatian's Diatessaron. He is quite right in saying that here in the East such ignorance is no disgrace. His fault as I regarded it was not ignorance but unwarranted dogmatism. The only reference I can give as to the discovery of the Diatessaron is the note at the end of the essay on Tatian's Diatessaron in Bishop Lightfoot's Essays on "Supernatural Religion." Ephraem Syrus's commentary on it is somewhat more fully treated in the seventh lecture of Salmon's Introduction to the New Testament. The Diatessaron opens with the words, "In the beginning was the Word."

"Secularian's" treatment of the quotations which I gave is an excellent example of the method used by the author of Supernatural Religion. These quotations, which he speaks of as "*more or less resembling* our present Gospels," resemble them so closely that the ordinary reader would probably detect no no difference whatever. "Secularian" discovers a few slight differences, and concludes that the quotations must be, not from the Gospels which have came down to us, but from other and earlier Gospels which have been lost. Has he never heard of inexactress of quotation? Surely he will admit, on reflection, that a good many Christians even in these days quote the New Testament inexactly. Yet now we have our whole Bible in one handy volume, and concordances at hand to aid us in turning at once to any passage wished. I do not know how it would be with "Secularian," but for my own part I must confess that if my library were like that of the Fathers, if I had no concordance, and my New Testament consisted of a number of rolls like Japanese *Kakimono*, I should probably always quote from memory, except when for some special reason minute verbal accuracy was important. But quotation from memory is extremely likely to be verbally inaccurate. The quotations of the Old Testament in the New often show verbal inaccuracy. That, on "Secularian's" principles, would prove that its writers quoted from some other Old Testament than that which has come down to us, especially when we remember that the Old Testament writers themselves often refer to older authorities. Or, to take a Shakespearean illustration, rather more pertinent than that which "Secularian" has given, we will suppose that some 17th century writer has a passage closely resembling the one in "Hamlet" beginning "To be, or not to be," but differing from that in several details. "Secularian" ought then to maintain that it was quoted, not from Shakespeare, but from some author whose works have been lost to us. He would hardly, however, carry the world with him. Even if he could show that there were other dramatists in the 16th century quite equal to Shakespeare, whose works have been lost, it would help his argument very little. So also it would give very little help to his present argument if I should admit (as I am very far from doing,) that there were other Gospels quoted by the Fathers with reverence equal to that which they pay to our four.

"Secularian" supposes that I will agree with him in condemning Prof. Howard's method as unscientific. My not having attempted to defend Prof. Howard may perhaps have led him to this conclusion. The truth is, however, that I read only a part of the report of Prof. Howard's lecture, and that rather hastily, so that I did not feel competent to pronounce any judgment upon it. I cannot, however, see anything unscientific in any one's taking for granted for the purposes of an argument anything that can be maintained with any show of reason, if he states clearly what it is that he thus assumes.

In conclusion, I wish to express my thanks to "Secularian" for the courtesy of his rejoinder to me. It would have been a very good thing if all controversies in the *Mail* on such subjects could always have been conducted with equal courtesy.

I am, very truly yours,

T. S. TYNG.

Tokyo, June 24th, 1891.

## SCIENCE AND RELIGION.

To the Editor of the "Japan Mail."

Sir,—In a *Mail* received to-day, I find a letter from Doctor Howard, in which there is an attempt to represent Professor Huxley and Herbert Spencer as Bible-believing Christians. When this Doctor made these quotations, he misrepresented two of the greatest minds of our age,—a serious misrepresentation of fact which should not pass unnoticed. Herbert Spencer never uttered or wrote any such words. Professor Huxley, the sturdy champion of scientific facts against Christian prejudice and Bible superstition, is too well known as a polemicist to need any elucidation of his real opinions from friends of common-sense. But Herbert Spencer, whose work, vast as the sea, may be far less generally familiar, can be misquoted with more impunity. I should like to know from Mr. Howard when, or in what work, Mr. Spencer, or Mr. Huxley, used the language which he has taken the liberty to put in their mouths. Replying to "Secularian," who caught him in another fragrant misstatement, he quoted the Bodleian Library just as he might have quoted the South Pole. Such vast and vague assertions without substantiation, lead me to suppose that he will quote the British Museum as a reply to my question. He claims to be only a layman, with plenty of leisure;—the same claim was made by a missionary teacher in western Japan, who told his Japanese pupils that "*only ignorant people read Herbert Spencer,*"—*he* had himself never read him. There seems to be a striking similarity in the knowledge and the laymanship of both parties.

Now please allow me to quote a little from Herbert Spencer's real opinions.

"Of all antagonisms of belief, the oldest, the widest, the most profound and the most important is that between Religion and Science."—(*Synthetic Philosophy*, First Principles, page 12.)

"Religion has been compelled by science to give up one after another of its dogmas.—of those assumed cognitions which it could not substantiate." (*Ibid*, page 107.)

"It is alike our highest wisdom and our highest duty to regard that through which all things exist *as the unknowable.*"—(*Ibid*, page 113.)

Regarding Mr. Howard's pretended quotation as to science being *religious*,—let me quote again:—

"Those who cannot conceive a self-existent universe, and who therefore assume a creator as the source of the universe, take for granted that they can conceive a self-existent creator. But they delude themselves. Self-existence is rigorously inconceivable. Whoever agrees that the atheistic hypothesis is untenable because it involves the impossible idea of self-existence, must perforce admit that the theistic hypothesis is untenable if it contains the same impossible idea."—(*Ibid*. page 35.)

Now let Mr. Howard reconcile that with the fables of his Christian Bible!

Again:—"Science has continually defeated it [Religion] wherever they have come into collision."

Nowhere did Mr. Spencer ever say so gross an absurdity as that "true Science is religious;"—nowhere did Professor Huxley ever disgrace his own common-sense by identifying knowledge with superstition. Religion as a universal sentiment among mankind has certainly been spoken of by Mr. Spencer as a *correlative* to Science,—and why? Simply because both Science and Religion have recognized the existence of that incomprehensible ultimate, which science modestly calls the Unknowable, and which Religion calls by a million names to no purpose. But, be it very strictly observed that even in speaking of Religion, the world's greatest philosopher speaks of *universal* religion only, as a phase in the history of human consciousness,—not the so-called religion of any petty creed or sect, and, least of all, the thing called "Bible Christianity."

Perhaps the students of the Imperial University may be induced to believe that Spencer and Huxley swallow the Bible every morning for breakfast. But, even in Japan, there are foreigners who know too much about the science of our age, and the scientific minds of our age, to suffer such misrepresentations of science and its apostles to pass unnoticed.

Yours, &c., LAFCADIO HEARN.

Matsui, June 20th, 1891.

## *ASIATIC SOCIETY OF JAPAN.*

### Annual Meeting.

The annual general meeting of members of the Asiatic Society of Japan was held on Tuesday in the rooms of the Society in Tsukiji, Tokyo. Rev. Dr. Amerman presided and there was a large attendance.

The minutes of the last meeting, having been already published, were confirmed.

A paper was then read by Mr. Percival Lowell comparing the Japanese and Burmese languages. Noting at the outset the changes to which language is subject, Mr. Lowell went on to say that the inevitable evolution was to a certain extent retarded where phonetic writing was in practice. Most of the Altaic races learned to read and write quite recently so far as education went, the Japanese and the Burmese both acquiring the art about twelve centuries ago. For reasons which he described, he found that the method by which to compare the two languages must be, not sound but thought, and when that method was adopted, all at once a resemblance showed itself. Prefacing that in the matter of verbal roots they were widely dissimilar, he went on to explain that both had but two parts of speech: in place of the long grammatical list through which the Western schoolboy had to plod, his far eastern counterpart cut the whole thing in two; facts and acts were what he had to go on. The facts included all parts of speech and were incapable of alteration; acts alone were capable of modification. To show how completely and primitively the Japanese and the Burmese denote facts he instanced the far-Eastern treatment of negation—which was introduced by a verb: to the early mind a fact could not be negatived. After comparing the Burmese form of "nobody" ("There is not so much as him") with the Japanese ("who even is not") the lecturer said that in the matter of gender the Burmese were as innocent as Adam and Eve in the Garden of Eden, and this led him to speak of the practice of appending to proper names the generic name for objects of each class. A Japanese river might change its name many times in its course to the sea, but it always retained the generic name for river (*Kawa*) and the same in the case of mountains, with one salient exception, Fuji. The Burmese did the same, and in some respects went further. Another point that he noted was the use of an explanatory phrase following a word as in the Japanese *to iu*, and he instanced the sentence *Naraya to iu Yadoya*, which, with the double use of the term for "house," he termed a three storied expression for a two storied affair. The Burmese, he said, designated people in a similar circumlocutory manner. With the remark that the Burmese may be said to possess a plural after the fashion of the so-called plural in Japanese as a double singular, he spoke next of pronouns, and stated that in both tongues there existed but one direct pronoun and that as it were under a cloud, the simplest form of the first person, for though there were hosts of them in polite fiction there was only one in fact. From the dawn of life every individual endowed with even the dimmest form of consciousness must be endowed with the fundamental fact, that "It is, it feels; it eats." So with the beginnings of speech there was a lively recognition of *meum*, preceding a sense of the existence of *tuum*. After speaking of the frequency of auxiliary numerals in the Burmese language and noting other peculiarities, Mr. Lowell, dealing with the verbs, said these constituted more than one half the parts of speech in Burmese, but though they represented acts they did not represent actions: deeds were not done, things eventuated. The tenses of the verb were next commented on, the similarity to Japanese in the Burmese treatment of the future being pointed out, and reference being also made to the abundance of honorifics in both tongues.

Mr. J. M. Dixon expressed the great delight with which he had listened to the paper, which he said was full of electricity. It was extremely pleasant to have heard Mr. Lowell merely as a mental gymnastic. Not being a student either of Japanese or of Burmese he could not speak as to the value of Mr. Lowell's conclusions, but in any case they were extremely suggestive.

Rev. G. T. Smith asked whether Mr. Lowell could make any comparison as to mathematics: how far could the Burmese count?

Mr. Lowell could not answer that question. The Burmese derived their numerals from the Palu. Their numerals, so far as he could see, presented no resemblance to the Chinese or Japanese. But such languages could not be taken in the same way as we would our own languages.

The Chairman had expected that a paper upon such a subject would have given rise to a most animated discussion, and in that respect he had been disagreeably disappointed. However, he was sure all had shared in high enjoyment of Mr. Lowell's paper, and if criticism were not passed that must no doubt be referred to the general pleasure the paper had given. He thanked Mr. Lowell in the name of the society.

Mr. Lowell was sorry that Mr. Dixon had spoken of electricity because that meant shocks, and that was just what he did not want to give. He had cut out the best parts, just that he might not do so.

Mr. Dixon suggested that shocks might be of a pleasurable nature.

Mr. Lowell and the Chairman having invited further discussion,

Mr. Droppers said Mr. Lowell seemed to approach the subject of language from a living, human nature point of view. His paper was a very living presentation of the subject, but the question was: could not the same thing be done with almost any two languages, for human nature was necessarily very much alike all over the world.

Mr. Lowell said the question might be answered logically—thus if it could be done of all languages he was not wrong in doing it of two; and next if it could not be done of all languages and he was wrong in doing it, then he was right.—(Laughter.) It was the combination of all the coincidences that made the thing impressive. It was not a question of verbs, or of adjectives, or of pronouns, or of numerals, or any one of these things separately, but of all them occurring concomitantly. Take our own languages, and see how many of them could be compared on these lines of thoughts. He was of opinion that Chinese, Korean, Japanese, and Burmese were all of the same family, though, that was not proved yet.

Mr. Agassiz, as a visitor availed himself of the Chairman's invitation, to say that Mr. Lowell's comparison would hold good with any nations in which there was a similarity of original methods of thought, for there only a few ways in which men could think.

Mr. Lowell contended that the comparison could not be made verbally, and for it one must go back to the forms of thought.

Rev. Mr. Smith asked whether in Burmese there was not a word *she*, used as the Japanese used *suru*.

Mr. Lowell thought there was such a word, but did not know whether it was so used or not, but pointed out that Burmese had not yet reached the agglutinative stage.

Dr. Divers asked whether Mr. Lowell meant that the two languages had a common origin, or that in the course of time languages that had a common origin lost their common words but in the most marvellous way preserved their common thoughts.

Mr. Lowell meant that they were of the same family.

Dr. Divers thought Mr. Lowell's paper suggested rather a common racial origin because their language showed a common primitive order of thought.

Rev. Clay McCauley instanced the case of tribes of North American Indians to show that peoples closely allied might evolve different languages.

Dr. Florenz expressed the opinion that the Burmese and Japanese languages were entirely different, and cited various points to prove his contention.

The meeting then proceeded to general business.

Mr. Chamberlain read the report as follows:—

### Report of the Council for the Session October, 1890—June, 1891.

The session now brought to a close has been a highly productive one. Two Parts of the volume of "Transactions" for the current year (Vol. XIX.) have already been published, and a third is in the printer's hands.

Ten General Meetings of the Society have been held in Tokyo, at which thirteen papers have been read, and two in Yokohama, at one of which a paper was read, while at the other a popular lecture was delivered. A glance at Appendix *A* will suffice to show how great is the variety of subjects that have been treated. The Society has furthermore endeavoured to enlist in the cause of Japanese studies even those who do not belong to its ranks, by issuing in pamphlet form a series of questions on the subject of Japanese Land Tenure. Copies of this pamphlet, both in English and Japanese, have been distributed throughout the country to missionaries, school teachers, and others whose opportunities may enable them to give assistance in a matter of such interest to the student of early Japanese law and customs.

The list of Exchanges (Appendix *B*) gives the titles of the periodical publications of other learned societies which are at the disposal of the members in the Reading-room, No. 17, Tsukiji, Tokyo.

The Treasurer's statement (Appendix *C*) bears witness to the satisfactory condition of the Society from a financial point of view. This it is that has permitted of the setting apart of a sum of $300 for the purchase of sundry valuable books on Japan, and for the purpose of enabling Professor J. H. Wigmore to carry out the plan of translating and editing several volumes relating to civil and commercial customs and to judicial matters under the Tokugawa Shogunate.

The Society has sustained the loss of one of its founders and most valued Honorary Members, the Rev. Dr. E. W. Syle, who passed away at an advanced age, respected and regretted by all. The general membership of the Society has slightly increased, bearing witness to the sustained interest felt in the Society's labours both here and beyond seas.

The Council are pleased to be able to announce that they have concleded an arrangement whereby the library has been placed in No. 17, Tsukiji, and a reading-room for members opened in connection with it.

### Appendix *A*.

#### List of papers read before the Society during the session 1890-1891.

"The Depth of the Pacific off the East Coast of Japan, with a Comparison of other Oceanic Depths," by Rear-Admiral G. E. Belknap, U.S.N.

"Mental Characteristics of the Japanese," by Walter Dening, Esq.

"Notes on Land Tenure and Local Institutions in Old Japan," by the late Dr. D. B. Simmons and Professor J. H. Wigmore.

"The Music of the Japanese," by F. T. Piggott, Esq.

"The *Gekkin* Musical Scale," by Dr. F. Du Bois.

"Remarks on Japanese Musical Scales," by Dr. C. G. Knott.

"The Mito Civil War," E. W. Clement, Esq.

"An Abridged History of the Copper Coins of Japan," by Léon Van de Polder, Esq.

"The Funeral Rites of Japan," by A. H. Lay, Esq.

"*Hana-awase*, a Japanese Game of Cards," by Major-General Palmer, R.E.

"Reply to Mr. Parker," by W. G. Aston, Esq., C.M.G.

"The Habits of the Blind in Japan," by J. M. Dixon, Esq.

"The Summer Climate of Karuizawa," by Dr. C. G. Knott.

"A Comparison of the Japanese and Burmese Languages," by Percival Lowell, Esq.

A Lecture on "The Nicaraguan Canal in relation to the Commerce of Japan," was delivered by Captain Taylor, U.S.N.

The Hon. Treasurer then submitted his accounts as follows:—

Accounts for the Year ending May 31st, 1891.

| | Dr. | |
|---|---|---|
| To Hakubunsha for Printing | | 420.24 |
| To Hakubunsha for Stationery | | 45.13 |
| To Postage | | 21.07 |
| To Insurance of Library and Transactions | | 32.50 |
| To Illustrations, &c., for Transactions | | 16.68 |
| To Carriage of Books | | 11.00 |
| To Yokohama Public Hall | | 20.00 |
| To Advertisements | | 6.00 |
| To Japan Directory | | 3.00 |
| To Error in Last Year's Accounts | | 10.00 |
| | | 584.62 |
| Balance | | 1,825.06½ |
| | | 2,409.68½ |
| | Cr. | |
| By Balance from Last Year | | 1,114.43½ |
| By Entrance Fees | | 75.00 |
| By Life Subscriptions | | 128.00 |
| By Yearly Subscriptions | | 743.00 |
| By Sale of Transactions | | 327.10 |
| By Interest at Bank | | 22.15 |
| | | 2,409.68½ |

Examined and found correct. J. N. Seymour, Treasurer. C. S. Eby, A. Tison, } Auditors.

June 21st, 1891.

The Chairman explained, in justice to the Treasurer and the Bank as well, that the error referred to in the accounts arose from no laxity of theirs, but that one of the members paid into the Bank twice as much as he ought to have paid, and they had to pay him back.

The report and accounts were unanimously adopted.

The election of Officers and Councillors for the ensuing year resulted as follows:—

President—B. H. Chamberlain, Esq.

Vice-Presidents—Rev. Dr. G. W. Knox, James Troup, Esq.

Corresponding Secretary—J. M. Dixon, Esq.

Recording Secretaries—A. Tison, Esq., J. K. Goodrich, Esq.

Treasurer—Dr. J. N. Seymour.

Librarian—J. McD. Gardiner, Esq.

Councillors:

| | |
|---|---|
| Rev. Dr. J. L. Amerman. | Rev. T. M. MacNair. |
| Dr. E Divers. | W. B. Mason, Esq. |
| Rev. Dr. D. C. Greene. | R. Masujima, Esq. |
| Rev. Clay MacCauley. | Dr. H. Weipert. |
| Rev. Dr. D. Macdonald. | J. H. Wigmore, Esq. |

Digitized by Google

The CHAIRMAN said they had all hoped to have the pleasure of the presence of Judge Hannen, but he had written saying it was impossible for him to be present, and asking the Chairman to thank the members for electing him as President, and to express the sorrow he felt in severing his active connection with them, and also the interest he should always take in their prosperity.—(Applause.) In conclusion, Dr. Amerman expressed the deep regret with which the members viewed the loss of Judge Hannen and Dr. Knott, and their high estimate of the most valuable services rendered to the society by those gentlemen.

## *CLUB HOTEL (LIMITED).*

The annual general meeting of the shareholders of the Club Hotel (Limited), adjourned from last month, was held on Monday afternoon in the Hotel at 4 o'clock. Among those present were Messrs. J. W. Hall, D. Fraser, O. Keil, G. H. Allock, J. Ph. von Hemert, J. R. Best, R. Ward, McDonald, T. J. Morriss, A. Hearne, Jubin, and Wilson Walker.

Mr. HALL took the chair and said—I regret to inform you, gentlemen, that Mr. Johnstone is very unwell and unable to attend the meeting, and I have been requested to take the chair on his behalf. I am sorry to say that we are rather short of directors at this meeting, Mr. Von Hemert and myself representing the board, Mr. Blakeway being absent and Mr. Cocking being also unable to attend.

The minutes of last meeting were read and approved.

The CHAIRMAN then said—The report and balance sheet of the Company having been in your hands for some time, I presume I may take them as read and proceed to move that they be adopted and passed. I wish, however, to give some explanation in regard to the remark made by the auditor. Mr. Keil objected to use the ordinary expression "Certify that the accounts are correct" on account of certain entries which, I quite agree with Mr. Keil, are not sufficiently explicit to pass unchallenged. The fact is that Mr. Blakeway in the interest of the company made cash advances out of his private purse, free of interest, to meet the first outlays for the Tokyo Branch. The reason for this was that at that time there was no available money of the Company to be used, as the advance from the Trust and Loan Co. had not been arranged. Later when the money had been obtained from the Trust and Loan Co. Mr. Blakeway partly refunded himself for what he had advanced, but part of the money so advanced is still unpaid and Mr. Blakeway appears in the list of sundry creditor for the amount due him. In making these advances to the Company Mr. Blakeway did not pass his cheque through the Company's bankers, but made payments on behalf of the Company by his private cheques drawn an another bank, and then credited himself simply with the cheques so drawn, without giving a detailed explanation for what particular purpose the money was used. The vouchers no doubt are there, but being partly Japanese receipts and mixed up with different payments, it is nearly impossible to got a clear insight into every special payment without the assistances of Mr. Blakeway. Mr. Keil and your directors are well satisfied with the aggregate correctness of the entries made, but for the necessary particulars to satisfy the auditor we must await the return of Mr. Blakeway. I trust gentlemen, you will be satisfied with this explanation. I may say that our earnings for the last year are less than those of the previous year. I think I may say that this is attributable to the epidemics which occurred. During the summer the cholera no doubt kept away many of our supporters from China, and during the winter the influenza was the cause of much harm to our local business. The bar-room receipts alone dropped some six or seven hundred dollars below the average. The present outlook is as good as could be expected, and I may say that the past quarter of this working year shows well, and a satisfactory result may be anticipated. By the assiduous efforts of the manager, Mr. Hearne, the Club Hotel has maintained its good name amongst the travelling public and local supporters. I therefore move that the report and accounts as already rendered to you be adopted and passed.

Mr. BEST said he would like to ask a question, which, however, might be more in form after the accounts were passed. The Chairman had said the $12,000 item in the accounts was money due to Mr. Blakeway on account of the Tokyo Branch.

Corrected on this point,

Mr. BEST said he would pass from it and ask another question. The sum of $45,000 was borrowed on account of the Tokyo Branch, was it not?

The CHAIRMAN said yes.

Mr. BEST said further the Tokyo Branch now stood upon the accounts at $53,728; in other words the Tokyo Branch had cost this branch nearly $9,000. In the report the directors said that as the branch had not been in operation for 12 months no statement of accounts had been drawn up. Could the directors not tell the meeting something about the approximate loss or gain on the Tokyo Branch?

The CHAIRMAN said the Tokyo Branch had not so far been a support to the earnings of the company, and as the year only closed in June no balance sheet, as stated in the report, had been made up. It was found that the accomodation of the branch was not sufficient and certain alterations and improvements had been made.

Mr. BEST only wanted to know whether the directors were able to tell the meeting what profit or loss had been made up to date.

The CHAIRMAN said as the business had not been working for a year no accounts had been made.

Mr. BEST thought that if the Tokyo Branch was to continue to cost this branch at the rate shown in the balance-sheet it would be better to have it closed if possible.—(Hear, hear.) A branch that was going to cost money at this rate would hardly be worth the company's while to keep.

The CHAIRMAN stated that up to the end of last year the Tokyo Branch paid its expenses. While the repairs and improvements were going on there certainly was not much business doing, but as soon as the workmen could leave the place and the improvements were finished, the directors had every hope that the branch would not only pay for itself but be a source of profit to the company.

Mr. BEST trusted it might. He simply put it that the shareholders—and he himself was only a small shareholder—could go only on the balance-sheet; and in the balance-sheet it appeared that the Tokyo Branch had already cost this branch the sum of nearly $9,000.

The CHAIRMAN said there was a further sum for the improvements and repairs.

The SECRETARY (Mr. Scheuten) explained that the amount included furniture, stores, and so on.

Mr. BEST quite understood that, but it appeared upon the balance sheet that $53,000 had been spent upon it in one way or another.

The SECRETARY said that had not all gone.

Mr. BEST said he understood that. But he wanted to know what the branch was doing. The directors said they could not give any account of it, and according to the balance-sheet it had cost this branch $9,000. As a shareholder he could only look for his facts to the balance-sheet.

The CHAIRMAN repeated that up to the end of the year the Tokyo branch had paid its expenses. Lately the place had been turned inside out by workmen, and of course there had been a loss of business, but as soon as the work was finished and they could take guests there would be a change for the better.

Mr. BEST then proceeded to formulate a motion to be put to the meeting.

Mr. FRASER seconded the adoption of the report and accounts, which was agreed to.

Following are the report and accounts:—

CLUB HOTEL, LIMITED.

The Directors beg to submit to you their Second Annual Report under Sec. 52 of the Articles of Association.

BUSINESS.

After deducting all expenses and writing off sundry accounts $3,711.49, there remains a net profit of $10,400, out of which we recommend that a dividend of 8 per cent. for the year should be paid to the Shareholders.

PROPERTY.

The property has been kept in an efficient state of repair, and additions to the furniture to the value of $3,875,46 have been made during the year, although this account has only been increased to the extent of $1,739 84.

TOKYO BRANCH.

This Branch not having been in operation for 12 months, no statement of accounts has been drawn up; the working accounts of same do not therefore come into the present Balance Sheet. The Directors in the meantime have been using every endeavour to enlarge the premises, in order to place the business on a paying basis. The additions are now almost completed, and will be ready for occupation early next month.

CHANGES.

Mr. J. Johnstone retires from the Board, as provided in Sec. 78 of the Articles of Association, but offers himself for re-election.

Mr. O. Keil was elected to audit the accounts, in accordance with Sec 3 of the Articles of Association. He retires but offers himself for re-election.

J. JOHNSTONE,
J. PH. VON HEMERT, } Directors.

H. A. SCHEUTEN, Secretary.

Yokohama, Japan, June 15, 1891.

Balance Sheet on 31st March, 1891.

E. & O. E.

J. JOHNSTONE,
J. PH. VON HEMERT, } Directors.

H. A. SCHEUTEN, Secretary.

So far as I am able to form an opinion from an examination of the books of the Company and a comparison therewith of the Vouchers submitted to me, I believe the foregoing statement of Assets and Liabilities, and Balance Sheet, to be correct.

O. KEIL, Auditor.

Yokohama, June 12th, 1891.

Mr. BEST proposed "That in the event of the Tokyo branch not coming up to the expectations of the directors as to profitable working within a reasonable time from date, a meeting of shareholders be called to discuss the advisability of closing or continuing it."

Mr. WARD seconded.

The CHAIRMAN pointed out that if the shareholders had confidence in the directors they might rely that they would have brought the matter before the meeting in the event of there being any chance of its being a loss.

Mr. BEST said he was passing no reflection upon the directors, but he thought it was well that the Company should know what the Tokyo branch was doing and have the decision of it in their hands. Because the directors might, out of anxiety and a wish that the place should pay, keep it on longer than a meeting of the shareholders might care to do.

Mr. FRASER regarded the motion as almost unnecessary. As the Chairman had remarked, he thought it the business of the directors to see whether the company paid at all its points or not, but he certainly thought that there had been some laxity—no, he would not use that word, but he did think the accounts for the Tokyo Branch should have been presented at this meeting. That was to say, the business of the Tokyo Branch up to the date of the company's accounts should have been balanced and a statement shown to the shareholders as to how it stood. As to its paying or not, he thought that might be left to the directors. It had not been in existence a year yet, and it really had never been finished. The house and the accommodation had not been completed, and until that was done it would be impossible to say whether as a branch it would pay. It was rather difficult for him as a business man to understand why the accounts of one branch of a limited liability company should be shown and the other not,

Digitized by Google

for the Tokyo Branch was included in the whole company. However, there had been difficulties in the way no doubt, and on the whole, without proposing a counter motion, he thought it might be for a while left to the directors to give it a good trial before the shareholders interfered.

Mr. BEST said he would withdraw the motion, as he could bring it forward at any time. He repeated that he did not intend to put any reflection on the directors, but he believed that they might be too sanguine in their expectations, and in their anxiety to see the branch pay, keep it on longer than a meeting of the shareholders would.

Mr. FRASER said they could not keep it on longer than a year.

Mr. WARD, as seconder of the motion, agreed to its being withdrawn.

The CHAIRMAN proposed the re-election of Mr. Johnstone as a director.

Mr. WARD proposed Mr. Fraser as a director.

Mr. FRASER seconded Mr. Johnstone's re-election.

Some discussion arose as to the advisability of electing a director in the place of Mr. Blakeway during that gentleman's absence.

Mr. FRASER asked if Mr. Blakeway had leave of absence.

The CHAIRMAN said he had.

Mr. FRASER said then no one could be elected in his place.

Mr. WARD thought the new director should be balloted for in proper form.

Mr. MCDONALD seconded the election of Mr. Fraser.

Mr. FRASER said if Mr. Johnstone was not on the board he himself should refuse to act as a director.

Mr. JOHNSTONE'S re-election was then carried, two voting against.

The CHAIRMAN said the subject of increasing the number of directors had been under consideration for some time, and it was the intention of the board to ask Mr. Fraser to join them if he would do so. He thought the directors had power at any time to increase their number to not more than seven, and he therefore proposed that the number of directors be increased from five to six.

Mr. VON HEMERT seconded the proposal.

Mr. WARD proposed again the name of Mr. Fraser as a director; the CHAIRMAN seconded, and the motion was carried unanimously.

On the motion of Mr. FRASER, seconded by Mr. VON HEMERT, Mr. Keil was unanimously re-elected auditor.

Mr. ALLCOCK, with regard to what had been said by the Chairman as to vouchers not being available, asked when Mr. Blakeway was likely to come back.

The CHAIRMAN said from letters received, he thought Mr. Blakeway might be expected in the next three months.

Mr. WARD asked whether it was intended to keep the electric engine behind the buildings at Tokyo puffing away every night. People complained bitterly about it and would not go to the house, as they could not sleep at night.

Mr. HEARNE said an arrangement had been come to with the Tokyo Electric Light Co., and the engine and machinery would be removed at the end of this month.

The CHAIRMAN gave a similar assurance. Mr. Hall then informed the meeting that the dividend warrants would be issued during to-morrow. He said he would also call the attention of the shareholders to the fact that since the establishment of the company the balance-sheet had contained no item for directors' fees or remuneration. Of course the honour was very great, but at the same time a small cheque at the end of the year increased the honour very considerably.—(Laughter.) In the next balance-sheet therefore, they might be prepared to see an item for remuneration to directors—though it might not be a very large amount.

Mr. BEST hoped they would also see good profits at the same time.

The usual votes of thanks brought the proceedings to a close.

---

Mr. A. B. Blackburn, of the Manchester Association of Engineers, concludes that the dynamo has been brought to such perfection in the last few years that little radical change can be expected in its general proportions and design. Its efficiency is already so high that increase is scarcely possible, being rarely less than 80 per cent. and in the best machines over 90, and even as high as 95 per cent. It is probable that future improvements will be chiefly in details of construction, labour saving in production, and perhaps new and less perishable insulating materials; the most important problem yet to be solved being the abolition of the variable sparking point.

## *IN H.B.M.'s COURT FOR JAPAN.*

Before N. J. HANNEN, Esq., Judge.—THURSDAY June 25th, 1891.

### THE DENING-"GAZETTE" CASE.

The action brought by Walter Dening against the Yokohama Printing and Publishing Co. (Ld.) was commenced this morning.

Mr. A. Tison appeared for the plaintiff, and Messrs. A. B. Walford and H. C. Litchfield for the defendant company.

In opening the case, Mr. Tison said his first word here was to be one of thanks for the privilege of thus appearing, or being here at all, and he thought it also his duty to say to the Court that it was not the choice of the plaintiff or of himself that the former was condemned to the imperfect assistance which was the best he could offer to the Court in this matter. If would be unbecoming in Counsel to say what he thought of the justice of the plaintiff's cause to the Court at this time, but he might say that he would have refused to appear here at all if he could have reconciled his non-appearance with a due regard to what he thought common fairness to any man who wished to appear in a Court of Justice with legal advice. If he could not help the Court, he hoped not greatly to embarass it. He had made such preparation as the short time at his command would allow him, and he only asked the indulgence of the Court that any errors he might make or any unfamiliarity with the Court would not prejudice the plaintiff's case. He was assured in advance it would not do so. He supposed his first duty was to read the pleadings. They were as follows:—

PETITION.

Between WALTER DENING, plaintiff; and THE YOKOHAMA PRINTING AND PUBLISHING CO., Limited, Defendant.

To N. J. HANNEN, Esq., Her Britannic Majesty's Judge for Japan.

The Petition of Walter Dening, journalist, the Plaintiff abovenamed, shows as follows:—

1.—The Plaintiff is a British subject in Yokohama, Japan.

2.—The Defendant is a British Corporation duly registered as such, and carrying on the business of Printing and Publishing at No. 70, Yokohama, Japan.

3.—On or about November 6th, 1890, a written Contract with the Plaintiff was made by John Frederic Lowder, James Walter, and William Gordon, said three persons acting for and on behalf of the Defendant Company of which they were the promoters.

4.—Thereafter and on or about January 1st, 1891, said Contract was with the concurrence of all the parties thereto by the Defendant in writing duly adopted, and made in all respects the act and deed of the Defendant.

5.—By said Contract the Plaintiff was employed to serve the Defendant as Editor for the term of four years from the first day of January, 1891, at a monthly salary of five hundred ($500) dollars local currency, payable on the last day of every month during the said term.

6.—The Plaintiff duly entered upon and performed all the engagements and duties by him to be performed under said Contract, until on or about 20th May, 1891, when he was unwarrantably prevented by the Defendant from so doing as hereinafter stated.

7.—On or about May 18th, 1891, Plaintiff received notice from the Defendant, that it had been voted by the Directors of the Defendant to dismiss Plaintiff from its service. Such action by the Directors was wholly unwarranted and without proper cause. Plaintiff so informing the Defendant, and insisting upon his right to continue performance of said Contract, offered and attempted on the 20th May, 1891, to perform his usual duties as Editor for the Defendant, but was prevented and excluded from so doing solely by the wrongful acts of the Defendant. From thence hitherto Defendant has wrongfully omitted and refused to allow Plaintiff to perform any of his engagements under said Contract, though Plaintiff has at all times being ready and willing to comply in all respects therewith, whereof Defendant has had notice.

8.—Defendant has not paid Plaintiff his salary for the month of May, 1891, though the same was due and payable on the last day of said month, but Plaintiff received $250 on account of said salary.

9.—The Defendant has dismissed Plaintiff from its employ, and omits and refuses to pay him his salary as aforesaid, without any reasonable or justifiable cause whatever, in consequence of which Plaintiff has become unemployed and is likely so to continue, to his damage of $21,750.000, which amount Plaintiff otherwise would have received as salary under the said contract with Defendant.

10.—On or about the last of December, 1890, Plaintiff at the request of the Directors of the Defendant moved from Tokyo to Yokohama, in consequence whereof Plaintiff's house in Tokyo, in which he had hitherto lived, was necessarily left vacant and become wholly useless and unproductive to the Plaintiff for the period of four months before the Plaintiff with his best endeavours in this behalf was able to let the same. The rental value of said house is $50 a month, and Plaintiff has thus lost $200, no part of which has been repaid by the Defendant.

The plaintiff therefore prays:—

1.—That he may have judgment against the Defendant for the sum of twenty-one thousand seven hundred and fifty ($21,750) dollars, being the amount of Plaintiff's salary for the remainder of his contract time of service with defendant.

2.—That Defendant be decreed to pay Plaintiff the farther sum of two hundred ($200) dollars with interest.

3.—That the Defendant pay the Plaintiff the costs and disbursements of this action.

4.—That the Plaintiff may have such farther or other relief as the nature of the case may require or as to this Honourable Court may seem fit.

The Defendant to this petition is
The Yokohama Printing and Publishing Co., Limited,
70, Yokohama, Japan.
represented by John Frederic Lowder, Chairman of the Board of Directors.

(Signed) WALTER DENING, Plaintiff.

Dated Yokohama, Japan,
June 2nd, 1891.

---

The Answer of the Yokohama Printing and Publishing Company, Limited, the above-named Defendants to the Petition of the above-named Plaintiff.

In answer to the Petition, the Defendants say as follows:—

1.—The Defendants admit the first five paragraphs of the Petition, but do not admit any other part thereof, and refer to the Agreement when produced.

2.—By the said Agreement the Plaintiff undertook from the 1st day of January, 1891, to edit the *Japan Gazette* newspaper; but proving unable to do so to the satisfaction of the Directors of the Defendant Company without assistance, they, on the 15th day of February last, appointed a Mrs. Smith to be the Sub-editor of the said newspaper; by the said Agreement the Plaintiff also promised that he would use his best endeavours to promote the interests of the Company, but in breach of his said Agreement, and to the injury of the interests of the Company, he neglected to avail himself of the assistance so provided him as aforesaid, to the extent he might have done, and altered, or suppressed, or refused to insert in the said newspaper several contributions of the Sub-editor, and misled the Directors by representing to them that she was incompetent to perform the duties she had undertaken, and so induced them to give her notice that her services would not be required after the expiration of three months from the 15th day of March last. Thereafter, the Directors having reason to believe that they had been misled by the Plaintiff as aforesaid, caused a letter to be written to the Plaintiff, requiring him to place at the disposal of the Sub-editor at least one column of the *Japan Gazette* every day until the termination of her agreement with the Company; but the Plaintiff, though by the said Agreement he had agreed to comply in all respects with the directions from time to time given by the Directors of the Company, in breach of his said Agreement, refused and neglected to obey the order so given to him, whereupon the Directors, as they lawfully might, dismissed the Plaintiff from the service of the Defendant Company.

3.—The Defendants deny that the Plaintiff has sustained the damage mentioned in the Petition, and submit that they are not answerable for any part of the damage thereby claimed.

Continuing, Mr. Tison said he was happy to be able to say that most of the plaintiff's evidence was documentary in form, and could be put in in very short time, and would not, he thought, give rise to very much discussion as to the evidence itself. To understand certain things, however, in reference to this case it would be necessary to go back to a little before the formation of this company, and this would be necessary for two reasons. First, there was a charge here that the directors gave to this plaintiff an authority which he had transcended and abused, and it would be necessary therefore to go into the origin of the company and the plaintiff's first connection with it to show what that authority really was, because a very great light was thrown upon it by the correspondence which took place between the plaintiff and the chief promoter of the defendant company. And in the second place it would be necessary in order to show the true amount of damage suffered by the plaintiff in this matter. The formation of the company dated, in idea at least, as far back as the 1st of October, or some time in the month of September, soon after a meeting which took place in this port concerning the revision of the treaties. He should have nothing to say in reference to that meeting one way or the other, except to say that those gentlemen who were most concerned in the foundation of this company had also much to do with the meeting, and it seemed to have been desired by them soon after the meeting to come into possession of a newspaper. Whether it was to champion a cause or to put money in their purses might not altogether be known—possibly there was a mingling of those two motives. There was some idea of championing a cause, at any rate the *Gazette* had already advocated a cause which was dear to the minds of those promoters. He had nothing to say one way or the other with regard to the cause, or their views as to it, but it was important to note that the views urged by those gentlemen were not such as met the approval of the Japanese Government, in whose employ the plaintiff was at the time, and whose employment he had to abandon to enter into the service of the company, and to whom now he might turn for employment by which he might hope to mitigate the damages the defendant company was liable to pay. It was not a question of the justice of the feeling of the Japanese Government with reference to this matter, it was a question of its existence in fact, and he dared to say that the learned chairman of the Board of Directors would be the last person to deny its existence in fact, however he might quarrel with its justice. The first thing thought of and desired in connection with this paper was to secure an editor—even before they had secured a paper. They approached the plaintiff; the plaintiff did not approach them. He was in no menial position with reference to this defendant. Some of the authorities which might be cited here were more applicable to menial servants than to a gentleman in the position of the plaintiff. He occupied no such position. Counsel should produce letters to be used in case of necessity, some of which must go in. He should show that during a few weeks between 30 and 40 letters—not mere notes, for some of them were of four pages—on several days two, and on one day three letters, were written by the chief promoter of this company to the plaintiff at his home in Tokyo. Not merely did they build an absolute trust upon him, but they would almost seem to have built their whole enterprise about him. That could not but affect the plaintiff with reference to the authority he was to have. If it had not been a company, if it had been a partnership, he ventured to say plaintiff would have been a partner for his knowledge of Japanese affairs. He had been in Japan for a great time, and was well acquainted with its literature; its public men and its public prints—the man of all men they desired and wished to secure. He was not in a "coming

Digitized by Google

on" position, and it was thought necessary to reassure him on many points. He had slowly gathered together that which was yielding him a good living, possibly $400 a month. He was asked to give that up; to burn his bridges behind him, come to Yokohama and enter the service of the company, and according to all appearance the plaintiff saw, as he saw now, that he would be a *persona non grata* to the Japanese Government. He desired security, and several times the most complete expressions of assurance were uttered by the chief promoter of the company to assure him on that point, and that gentleman even suggested that he should be secured by a bill of sale, a chattel mortgage on the stock, printing press, and machinery which they had in their place of business, to secure him to the extent of at least one half of his unexpired salary in case of the company going into liquidation. Eventually under a clause of the agreement he availed himself of this and took a bill of sale which was prepared by the chairman of the board. Mr. Dening also wished to be reassured on another point, and that was as to how much authority he would have. There was some discussion as to the *personnel* of the company, but several times he was put off when he suggested that it should be discussed. Mr. Dening wanted to know what authority he was to have, and Counsel should read letters, one after the signing of the contract, that he was to have absolute and entire control. They were going to have a Japanese paper, which was only suppressed on the repeated protests of the plaintiff. The *Gaikoku Shimbun* never saw the light, but it would have seen the light and probably been a fruitful source of loss to the company if not suppressed. When it was suggested that there should be a French paper it was made a condition that the French editor should come to take orders from the plaintiff, and that everything to go into it should pass through his hands, and he should have a veto on it. The Japanese editor of the ill-fated *Gaikoku Shimbun* was similarly to take his orders from him, and he was to have control of all newspapers to be printed by this company. That would appear when the contract was put in evidence. More than once when the chairman sent round to the plaintiff matter for the paper, he accompanied it with a request for its insertion "if you think proper." The plaintiff was required to move from Tokyo, which was not provided in his contract—against his wish—for he believed there would be advantages for the company by his remaining there. He came to Yokohama and suffered considerable loss by not having his Tokyo house rented—loss estimated at $200. He made no claim for moving expenses, possibly no claim for rent would have been made if this contract had been fulfilled in good faith. They were short-handed when he came, and he was asked if things went hard at first to make allowance. His Honour knew from cases brought in this Court that two members of the staff of the *Gazette* were not in their places when the New Year came,—the reporter and the sub editor. The plaintiff was not responsible for their absence, but he moiled at his desk like a galley slave. The directors scattered a smile now and then, and he lived on that. Then they suggested that being unable to do the work they should take on a sub editor, and on the very day that the letter was written by this lady's husband from Nagoya there came from the directorate unsought a letter thanking the plaintiff for the improved tone and the general advancement of the *Gazette* under his management, and recognizing the fact that he had had no proper assistance hitherto. The plaintiff suggested certain reasons why he thought their choice was not a wise one, and if called upon could testify to what he then said. But they must have a book-keeper, and the sub-editor, if taken at the same time, could be got almost for nothing—as the chairman himself told the plaintiff, the book-keeper would cost $150 and the two would cost $200 if they were both taken, being husband and wife. Counsel would not have said that, but the suggestion was put into the answer by a man who he thought did not know the facts that these two persons were taken because the plaintiff was unequal to his work. Nothing could be farther from the fact, unless it were some of the conceptions under which the defendant's counsel laboured in this matter. The agreement did not say plaintiff should do without a sub-editor; it was silent on that point. Passing now to the time when the plaintiff was married. The arrival in Japan of the lady who is now Mrs. Dening necessarily made some demand upon the time of the plaintiff, but that could not have led to this case. On the 12th of May, when Mrs. Smith's engagement was about to expire, the plaintiff, having in mind a Mr. Cuven, wrote with reference to his taking Mrs. Smith's work when she should leave. To that the directors replied on the 13th that they should interpose no difficulty in the way of plaintiff employing Mr. Curwen and paying him out of his own pocket to enable him to perform his contract, but they were not going to employ any more sub-editors. They said that it was the directors' desire that one column should be placed at Mrs. Smith's disposal during the rest of her engagement. The plaintiff on the 14th replied that he regarded what they said about the sub-editor as an interference with his duties as editor, reminding them that it was necessary to revise, certainly to read, whatever went into the paper, that it was not his disposition to suppress anything offered by Mrs. Smith, and that he would continue to avail himself of her services so far as he might be able to. Next day at noon the plaintiff was married, and on the same day the directors wrote to him that it had been voted to dismiss him for disobedience to the lawful orders of the directors. They did not say that he was hereby dismissed, but it was voted to dismiss him. The letter was written on the 15th, and they sent it where they knew the plaintiff was not. He had asked and obtained leave of absence, and had gone to Miyanoshita on his honeymoon, but they sent the letter to the office, and it lay there till the 18th, when he returned. He ventured to say that the learned chairman of the board would hardly maintain as a matter of law that such a letter of dismissal, even though warranted, could take effect from the day on which it was written. During his absence the plaintiff did work for the paper, having supplied leading articles and left behind a stock of translations. On his return he received the letter mentioned, and on going to see the Chairman he was told the latter could say nothing to him. He tried to find legal advice in Yokohama, but failed because all the Counsel had been retained before his return—the lawyers who usually practised in this Court. He wrote in answer to the latter that he was sure there had been some mistake; that nothing was farther from his purpose than to disobey the orders of the directors, that they had used the word "desire," and he did not construe that as an order. He of course remembered the long correspondence he had with Mr. Lowder while he was in Tokyo. But he said if they did mean it as an order he now announced his willingness to comply with it, as he had always been anxious to comply with the orders of the directors. He did not interpret their letter as a dismissal, and it was a long time before that fact became clear. He intimated that he would be at his desk on the 20th to continue his duties. They replied on the 19th that, having read the correspondence, they had voted to stand by what they had written. He went to his desk on the 20th, communicated to Mrs. Smith that she was to have a column a day, and went about his work, but no one would print what he offered. He asked the chairman in a courteous note if he had forbidden them to print his matter, and was told that he had no right to the information. He asked the reporter; the reporter asked the chairman, and was told to say that he could not tell him what he wanted to know. No one would print the matter, and so he came away. On the very day on which the letter was written, when he might have resented this meddling on the part of the directors in affairs as to which they were clearly not informed, on that very day Mrs. Smith had 2½ columns in the paper—one a leading article, or at any rate in the place of the leading articles. As a matter of fact in the month of May she had an average of over a column daily, and plaintiff had found that during 74 days on which the paper appeared she had 105 columns and 21½ inches, or at the rate of $1\frac{43}{100}$ columns per day. And yet this was the lady whom the editor-in-chief was charged with excluding from the columns of the paper under his charge. Some days she had as much as 4 columns, and if on half a dozen days there were none, probably all were used, for he supposed there was a limit even to the productiveness of sub-editors. When it became clear that dismissal was intended, plaintiff wrote protesting and informing the directors that he should prosecute such rights as he might be advised he possessed. To this the directors replied that they had nothing to add, and requested him to vacate his room in the office. He ventured to think that some of those letters could hardly have come under the scrutinising eye of the chairman, or he would have discerned some looseness in their phraseology. As to the damage, he should contend that the plaintiff ought to be paid the balance of his salary for the full term of the agreement. He was willing, and consented to take his risks with the rest of the subscribers. He held, or at one time held, some shares in this company and he had agreed that in case of disaster—should the company be overtaken by bankruptcy—he would take one half of the remainder of his salary. But he never contemplated anything like this. He never consented to be bundled out in this way and then take one-half. He had used such diligence as he could, but the Japanese Government turned from a man who had been connected with this paper. The burden was laid upon the defendants to show that he could get something else, but having been a journalist he was not bound to go about seeking this, that, and the other employment to lighten the pockets of these gentlemen. The law was clear on this point—that it was not every business offered to a man that he could be made to take to lighten the damages of those who dismissed him. He thought Mr. Nuttall's case decided that point, because Mr. Nuttall had been offered a better salary, and yet his Honour held that he was not bound to take it. Counsel had said nothing about Mrs. Smith beyond what he had to say, and he really hoped that the defendants would not open that door as widely as they seemed in their answer to do. Because it was painful. It was not the plaintiff's desire to lay a straw in the way of a lady who was battling bravely in her struggle with the world. He should not think that the directors would want him to do that. It was no secret from them why the plaintiff had refused the admittance of certain articles, or why he had revised others. It was his duty to tell them, and he had told them frankly, but that was different from coming here and saying it. He might say it to them, and it would be a privileged communication, but if he were to blazon it from the house tops he would render himself amenable to a charge of libel, though such statements in this Court would not be libelous. He contended that even though the directors proved everything they alleged, that would still constitute no offence. It would only be a mistake of judgment, and his Honour would not hold that plaintiff's conduct was to be reviewed here, now, and in this way. After citing a couple of cases, Mr. Tison went on to say that the directors said the plaintiff had misled them about Mrs. Smith, that she could do more than the plaintiff said she could do. They had elevated her to the chair which the plaintiff had occupied. Counsel congratulated her, but suggested that she should rejoice with trembling, because this directorate seemed to have a way of removing an editor who was *de trop* beside which the bow-string of Eastern dispots was a dilatory transaction. But she took that risk; that was not the plaintiff's affair, but let her be warned by the same precedent that no resuscitation from euthanasia would be assisted by any of the eminent barristers who were admitted to the privilege—he would say the duty—of seeing to it in this Court that every subject of England should have exact and impartial justice. But he begged the pardon of the Court and of the lady in question for inroducing these death's heads and memento moris into the blythe and jocund days which came of her promotion. He only said he should think the directors would not intrude this matter here: that they would not use as a shield for themselves one editor against another. He only said that if their editor did not gain credit it would be their own affair and not the plaintiff's; that they should be sorry; that it should be painful, disagreeable, distasteful to the plaintiff in the last degree. But they seemed to hold editors cheap, and they might be of another opinion. Yet let them not misconstrue what he had said. It was not because of weakness that he said this, because the plaintiff was ready to enter any line of enquiry to which the defendant might see fit to open the door.

Walter Dening, sworn, deponed—I am the plaintiff. I came to Japan on December 14th, 1873, and have lived in Tokyo since 1883. I have been in the employment of the defendant company. I was first approached with reference to my engagement on the *Gazette* early in October—October 3rd I think. I was first approached through Mr. Irwine who was desired by the directors of the company to send me a letter. I have not that letter. Mr. Irwine asked me first whether I would be prepared to accept the editorship of a paper in Yokohama. He mentioned no conditions. I wrote asking conditions and had another letter saying that they were prepared to pay me $500 a month and make a three or four years' contract. I said I would accept that offer on certain conditions; that a partzian paper would not be required, that I should not be required to become the editor of a partizan paper. I was then employed in the Naval Department, at the Imperial Naval University. I also contributed to the *Japan Mail*, and that was a regular source of income. My income was tolerably permanent. It was from various sources, some of which might be a little uncertain. My engagement with the Naval Department was new for two years. Mr. Lowder was, I think, chief promoter of the Anti-Revision meeting and was Chairman of the Board of Directors of the company. I have had letters from Mr. Lowder, 34 in all, concerning the proposed company and my connection with it. Sometimes I got 3 letters a day, and I had several conferences also. Some of the letters that I received are not here. I had hesitation and reluctance in entering the service of the

Digitized by Google

company, on the ground of the business insecurity of the company as a company. I communicated that to Mr. Lowder, and he promised to secure me against loss. If necessary he said he would secure me personally. We also discussed the subject of the staff of the paper. That subject was shelved by Mr. Lowder. It was put off from time to time to be discussed at a later date. My reason for being distrustful as to the prospects of the company, was that it had been founded half on sentiment and half on the prospects of business profits, and I thought it improbable that the two elements would work well together, and that it might end in failure. I considered that the way would be shut against my return to my former employment. I do not recollect whether I ever said so to Mr. Lowder. I may have said so in a letter. It would be so in consequence of the fact that the Japanese Government must regard the movement to establish the company as in connection with the treaty revision meeting on the 11th. That guided me on the point of having three or four years engagement. Mr. Lowder made the suggestion as to the security. It was said that I should have sole authority over the contents of the paper. I was also to have authority over the French paper. All the matter to go into it was to be submitted to me. I would have to have power to exclude. It was suggested to me by Mr. Lowder that a Japanese paper, to be named the *Gaikoku Shimbun*, was to be published by the Company, and that I should have control over its editor. I said that the scheme was a wild one, and was bound to end in financial failure, and I advised Mr. Lowder to drop the idea of starting anything of the kind. They acted on that advice. I was consulted about everything in connection with the company. It was suggested that I should prepare a prospectus, but I thought it better that the chairman of the directors should prepare it. That was done, and I offered certain criticisms some of which were adopted. They consulted me about the price of the paper, and in deference to my opinion they altered the method of stating the price. I entered into a formal contract with the company—with certain individuals in the first place, and later on it was endorsed by the directors. I produce the document, the signatures of which are those of the directors and myself:—

An agreement made this Sixth day of November 1890, between John Frederic Lowder, James Walter, and William Gordon for and on behalf of the Company hereinafter referred to of the first part and Walter Dening of 15, Masago-cho, Hongo, Tokyo, of the other part. Whereas a Company is about to be formed for the purchase of the newspaper called the *Japan Gazette* together with the printing and publishing business heretofore carried on by the proprietor thereof, and for other purposes; now this agreement witnesseth:—

1.—The said Walter Dening shall be the editor of the said newspaper and of any other newspaper or newspapers to be published by the Company, and shall hold the said office for the term of four years from the 1st day of January, 1891.

2.—The said Walter Dening, unless prevented by ill-health, shall, during the said term, devote the whole of his time, attention, and abilities to the editorship of such newspaper or newspapers as may be published by the Company, shall obey the orders from time to time of the Directors of the said Company, and in all respects conform to and comply with the directions and regulations given and made by them, and shall well and faithfully serve the Company and use his utmost endeavours to promote the interests thereof.

3.—There shall be paid to the said Walter Dening as such Editor, a salary of Five Hundred Dollars of local currency on the last day of every month during the said term.

4.—The Company shall, on the written request of the said Walter Dening, hypothecate to him such specific portion of the property of the Company as shall secure to him, in the event of the Company being wound up before the expiration of the said term, a sum equal to $250 a month for the unexpired period of the said term at the date of such winding up.

5.—The said John Frederic Lowder, James Walter, and William Gordon shall procure the adoption of this agreement by the Company, in such manner as to render the same binding on the Company, whereupon they shall be discharged from all liability in respect thereof.

As witness the hands of the parties hereto the day and year first above written.

(Signed.) J. F. Lowder.
W. Gordon.
James Walter.
Walter Dening.

An Agreement made the 1st day of January, 1891, between the Yokohama Printing and Publishing Company, Limited, of the first part, John Frederic Lowder, James Walter, and William Gordon of the second part, and Walter Dening, of No. 70, Yokohama, of the third part; Whereas since the execution of the within-written agreement the company has been incorporated in accordance with the intention in that behalf referred to in such agreement; now it is hereby mutually agreed as follows:—

1.—The within-written agreement is hereby adopted by the Company, and shall be binding on the said Walter Dening and on the company in the same manner and take effect in all respects as if the company had been in existence at the date thereof and had by these presents ratified the same.

2.—The said John Frederic Lowder, James Walter, and William Gordon shall from henceforth be discharged from all liability under or in respect of the said agreement.

In witness whereof the parties of the second and third part have hereunto set their hands and caused the seal of the company to be affixed the day and year first above written.

W. J. S. Shand, R. S. Schwabe, } Directors of the Yokohama Printing and Publishing Company, Limited.
J. F. Lowder.
W. Gordon.
James Walter.
Walter Dening.

What effect would your entering the service have on the prospect of your future employement on the *Japan Mail*?—It would seriously effect it to my prejudice, because one of the objects of this paper was opposition to the *Japan Mail*.

Was anything said by Mr. Lowder as to what he wanted to do to the *Mail*?—He said he wanted to kill the *Mail*.—(Laughter.) The letter shown me is from Mr. Lowder, and is dated October 23rd. (Letter produced and read, in which Mr. Lowder, writing to plaintiff, said he was more pleased than he could tell at the course taken by Brooke's friends at the meeting on the previous evening. He had had his opportunity and had thrown it away, leaving "us" free to act, and the writer had not been slow to take advantage of the occasion. He had made an agreement with Anglin for $55,000, of which the latter wished to retain $35,000 for himself. If the company was formed well and good: if not he would himself find the balance necessary for the purchase of the *Gazette*. The arrangement was that "we" take the paper from the 1st January, but its columns were open to them in the meantime if they choose to assume the Editorship, so that if plaintiff was still "on it" let the writer know at once that he might set to work on the preliminaries. Plaintiff could make his own arrangements. The enterprise would have the support of the Yokohama community. The letter mentioned a number of names of supporters.) Mr. Lowder proposed that in case the scheme fell through, he himself should go on with it, taking half a share from Mr. Anglin. He thought my security would be greater; that I should be responsible to only one man instead of to a number, and things would work better. He said he would regard it as a very good speculation.

That would imply you as editor?—Certainly. I recognise the letter of Nov. 8th. (Letter of Nov. 8th put in as bearing on the question of authority, being in reply to one from plaintiff as to the extent of Mr. Anglin's authority.) Mr. Lowder thought it quite necessary to move to Yokohama. I at first objected, but eventually gave way, and came about the end of December. I had a house in Tokyo, my own, which I had had for a long time; I advertised it in the papers, but for four months had no rent for it. It was eventually rented at $50 a month, a low figure. When I went on the 1st January I found the reporter, Mr. Littlewood absent, and only the manager there. There was no sub-editor. This gave me the whole work of the office to do, seeing that the manager, as may be remembered, was an entirely illiterate man, not able to correct any proofs or anything of that kind. I said for many reasons I thought it would not be advisable to retain Mr. Nuttall. I did not say that I did not want any help. I simply gave as a reason the feeling of Mr. Nuttall in reference to his having been removed from the editorial chair. I did not say I did not want a reporter. (Shown letter of January 19th.) I don't think that bears Mr. Lowder's signature. Mr. Lowder anticipated that 400 missionary subscribers would be obtained; I did not think so—I never dreamt of it. They were to get the paper at half-price, provided 400 came forward. I imagine it would have paid on those rates.

19th January, 1891.

W. Dening, Esq.,

Dear Sir,—At a meeting of the Directors held on the 17th inst., it was resolved that their appreciation of the energy you put into your work and of the improved tone of the *Gazette* under your Editorship should be recorded in the Minutes and communicated to yourself: and I have much pleasure in being made the medium of conveying to you this expression of the opinion of the Board. With the assistance we have only now been able to give you in the person of Mr. Littlewood, it is hoped you will be able to obtain more items of local news, and to give a fair share of attention to the outports, in the business of which many subscribers to the paper are interested. It was also thought that the extracts from home papers might be shortened with advantage. These matters are mentioned, not with the object of interference or fault finding, but to place you in possession of views which have been expressed to members of the board. Yours very faithfully,

(Signed) J. F. Lowder, Chairman.

The extracts from home papers were so long on account of the smallness of the staff. There was no one but myself, and I could not leave the office and go round the streets of Yokohama to collect local news and edit the paper at the same time. Mr. Lowder asked me to put up with the office being short-handed. I applied for the hypothecation named in my contract. It was given to me. Mr. Lowder drew it; Mr. Mason was by when it was executed by me. I did not have it recorded or filed. Mr. Lowder did not tell me to do so, and I had no other legal advice in reference to it. I attempted later, but found it was too late. The hypothecation is as follows:—

This Indenture made the 23rd day of March, 1891, between The Yokohama Printing and Publishing Company, Limited (hereinafter called the company) of the one part and Walter Dening of Yokohama of the other part; Whereas by an agreement made the 1st day of January, 1891, between the parties hereto it is provided that the Company shall on the written request of the said Walter Dening hypothecate to him such specified portion of the property of the Company as shall secure to him in the event of the Company being wound up before the expiration of the four years from the 1st day of January, 1891, a sum equal to $250 a month for the unexpired period of the said term at the date of such winding up; And whereas the said Walter Dening has preferred to the Company a request in writing calling upon the Company to give effect to the said agreement; Now This Indenture Witnesseth that in pursuance of the said agreement the Company doth hereby assign unto the said Walter Dening all and singular the chattels and effects which are particularly described in the Schedule hereto annexed and all the right title interest claim And demand of the Company of in and to the said chattels and premises and every part there of to have and to hold the said chattels and premises hereinbefore assigned or intended to be assigned unto the said Walter Dening, provided Always And it is hereby declared and agreed by and between the Company and the said Walter Dening that this indenture is given to secure the payment of $250 a month to become due from the Company to the said Walter Dening in the event of the Company being wound up before the expiration of a period of four years from the first day of January, 1891, and it is hereby also further declared and agreed by and between the company and the said Walter Dening that until the company shall make default in any such monthly payment of $250 if and when the same shall become due and payable it shall be lawful for the Company to hold possess use and enjoy the said Chattels and premises hereby assigned without let hindrances or disturbance of from or by the said Walter Dening. But in case the Company shall make default in any such monthly payment of $250 if and when the same become due and payable it shall be lawful for the said Walter Dening peaceably and quietly to take into possession hold and enjoy all and singular the said Chattels and premises or such part thereof as shall be of the value of the balance of the moneys that shall be due and payable to him by virtue of these presents at the time of such default. In Witness thereto two of the Directors of The Yokohama Printing and Publishing Company Limited have hereunto set their hands and have caused the seal of the company to be affixed, and the said Walter Dening hath hereunto set his hand and seal the day and year first above written

J. F. Lowder.
W. J. S. Shand.

Signed and Delivered by two of the Directors of The Yokohama Printing and Publishing Company, Limited and the seal of the said company attached in the presence of W. B. Mason.

Signed Sealed and Delivered by the within named Walter Dening in the presence of Walter Dening.
W. B. Mason.

Adjourned till two o'clock.

Examination resumed—The paper was not secured when I was engaged. Negotiations were carried on with the *Herald* which fell through, but negotiations with the owner of the *Gazette* proved successful eventually. That was on the 22nd October. My contract was practically settled in the first week of October. Mention was first made of the engagement as sub-editor of Mrs. Smith about the 17th or 18th January. I received a letter from Mrs. Smith and another from her husband, advising me that they were in negotiation with the directors on the subject of coming to Yokohama, Mr. Smith to act as book-keeper and Mrs. Smith as sub-editor. They had offered themselves to Mr. Lowder, and it was put in this way that Mrs. Smith's services should be thrown in on consideration of Mr. Smith being appointed book-keeper. On consideration of their both receiving $200 Mrs. Smith's services were to be given gratis. Mr. Lowder consulted me on the point, and I thought, apart from the question of Mrs. Smith's literary qualifications, her sex would make it inadvisable. Mr. Lowder could not see that, and I replied that she would have to receive people in the office and go out and take reports which her sex would make inconvenient. Eventually Mr. Lowder told me that the directors wished to make the appointment unless I actually vetoed it. I said I did not care to veto, it but he knew my view. (Witness identified the letters received from Mr. and Mrs. Smith.) A statement was made in the native papers that Mr. Dening who had been employed by the Government and been known as a man of pro-Japanese feelings, had undertaken the editing of a paper for the anti-revision party, and that some one intended to wait on me and enquire the reason of the change. The police in consequence of this set a body guard at my gate for 5 or 6 weeks.

What effect did your engagement have on your relations with the editor of the *Mail*?—As readers of the paper are aware, the paper came into collision with the *Mail* very early in January, and I remained in collision with the *Mail* throughout the whole time. I have been recently married. My wife arrived on May 10th, and I was married on the 15th at noon. I am shown a letter written by me to the company dated 12th May:—

"Japan Gazette" Office,
Yokohama, May 12th, 1891.

My dear LOWDER,—In another month or so Mrs. Smith's time will be up, and it is high time to think of after arrangements. The enclosed letter was handed to me by Mr. Anglin some weeks ago. Thinking it desirable to have further information on Mr. Cuven's qualifications, I wrote off to him, asking for testimonials, &c. Until the business of the Company pays a fair dividend I am prepared to pay $50 a month towards the salary of a sub-editor, and I think it most important that we should get a man who has had newspaper experience. Mr. Cuven's answer will probably be here by the next mail. Yours very truly,

(Signed) W. DENING.

My reason for making the offer of $50 was that I had heard that the concern was not paying, and out of regard to the paper and the cause I offered to pay $50 out of my own salary to secure a sub-editor and try to obtain a dividend. I received a letter dated 13th May, as follows:—

May 13th, 1891.

WALTER DENING, Esq., Editor "Japan Gazette."

SIR,—Your letter to Mr. Lowder of yesterday's date, in which you contemplate the employment of Mr. Cuven as sub-editor of the *Japan Gazette* on the termination of Mrs. Smith's period of service, has been laid before the Directors of the Yokohama Printing and Publishing Company, Limited, by whom I am instructed to inform you that whilst it is not their intention to employ a sub-editor after the 15th June next, they would place no obstacle in the way of your engaging the assistance necessary to enable you to carry out your agreement with the Company. I am to add that it is the desire of the Directors that at least one column of the *Gazette* be placed daily at the disposal of Mrs. Smith during the remainder of her term of employment.

I am, Sir, yours faithfully,

(Signed) W. B. MASON, Secretary.

To it I replied as follows:—

"Japan Gazette" Office,
Yokohama, May 14th, 1891.

The Secretary of the Yokohama Printing and Publishing, Company (Limited).

Sir,—I beg to acknowledge your letter of to-day's date. The first part of the letter will receive my attention later on. The latter part I regard as interfering with my duties and powers as editor. What goes into the paper day by day has to depend on circumstances. I may say there is hardly anything wholly written by Mrs. Smith; since what she writes needs correction, it often has to wait over till I find time to revise it. At the same time, her services have been and will be utilized as much as possible. I am, Sir, yours faithfully,

(Signed) W. DENING,
Editor of the "Japan Gazette."

My marriage took place before I received the answer. I went to Miyanoshita, and had leave of absence. I named the time from Friday at noon to Monday morning, but Mr. Lowder told me I could take as long as I pleased. I received the latter dated May 15th:—

15th May, 1891.

W. DENING, Esq., Editor, "Japan Gazette."

Sir,—At a meeting of the Directors of this Company held here to-day, your letter of 14th inst. together with the preceding correspondence were read, and it was resolved; That Mr. Dening be dismissed from the service of the Company for disobedience to the legitimate orders of the Board of Directors, and that the Secretary be instructed to write to Mr. Dening and inform him of this decision. I am, your obedient servant,

(Signed) THOMAS WATSON, Secretary.

I received that letter on the morning of the 18th. It was on my desk in the office. I told the directors I would be back on the 18th. I left two leading articles which were published on the 15th and 16th, and I left a long translation. We had no translator who understood English, and I had been in the habit of preparing all the more difficult translations myself, as I always thought it better to prepare things myself to ensure perfect accuracy in matter of controversy, especially with the *Mail*. My reason for objecting to the hard and fast line drawn by the directors was that pressure of matter might cause exclusion of work done by the editor himself; besides, some matter required a good deal of correction, and on certain days when I was preparing translations and picking out controversial points and a variety of other matter to go into the paper, it was perfectly impossible for me to correct the sub-editor's matter, and such days it would be detrimental to the interests of the paper that I should stop to correct some of the plays of Shakespeare or Spenser's "Faerie Queen" referring to days long gone by. I have had contributions from other quarters which cover the whole ground treated by the sub-editor and rendered her writing entirely unnecessary for that day. I did not consider the word "desire" as an order, and when I returned from Miyanoshita I called upon the chairman and said the matter was evidently founded on an entire misconception. He said he did not mind whether it was or not; he would not give any advice, and I had to go elsewhere for advice. I said I should go down to my office and carry on my work. He said he had made arrangements that my honeymoon should be lengthened two days. He said he should make no legal use of this extension of my honeymoon. I said I should afterwards go back to the office. I thought it advisable to take legal advice. I wrote to and afterwards had an interview with Mr. Walford, who informed me that he was retained by the company, and could not serve me, and Mr. Litchfield also told me he had been retained that morning. I wrote the following letter dated May 18th:—

Yokohama, May 18th, 1891.

The Secretary of the Yokohama Printing and Publishing Company, Limited.

Sir,—I have this day received with surprise your communication dated the 15th instant. I have re-read the correspondence to which you refer, and I am sure that there has been some misunderstanding on the part of the Directors of the Company. I certainly am not conscious of any disobedience to the orders of the Board of Directors. Their letter of the 13th instant merely expressed a "desire" that Mrs. Smith should have at her disposal at least one column of the *Gazette* daily. My answer to that was such as I considered my duty to the interests of the Company required me to make. I was far from taking it as an order. However, now that the Directors make it plain that they so intend it, I very cheerfully accede thereto. I may say that I think Mrs. Smith has all along had on an average more than a column of space in the paper daily, and that there has been no disposition on my part to cut this down; but I wished the Board to understand the difficulty of establishing any hard and fast rule for each day. Not to have made this clear would have been, I then thought, to fail in my duty to the Directors. I am, however, as I have always been, ready to obey all orders from the Board of Directors in this as in all other matters connected with the editorship of the paper. I do not interpret your letter of the 15th instant as a dismissal, and beg to say that I have returned from the leave of absence kindly granted me by the Directors, and I shall be at my desk in the office of the *Gazette*, at 8 a.m. to-morrow, the 20th instant, to continue my editorial duties. I am, Sir, yours faithfully,

(Signed) WALTER DENING,
Editor of the "Japan Gazette."

Nothing had been said before, and no enquiry made as to the space accorded to Mrs. Smith. No one had said anything to me. I had asked for a meeting of directors, but it was always refused. As a matter of fact on the 14th May Mrs. Smith had two columns, one a leading article. While I was at Miyanoshita Mrs. Smith was in charge, perhaps the manager more than she was. During twelve days of May Mrs. Smith had 18½ columns. Up to the 14th May she had 105 columns 21½ inches or an average of $1\frac{45}{105}$. Some days she had 4 columns in the paper, 4½ columns, 4 columns and 8 inches, &c. I made those measurements myself, and now produce a paper in which the figures are shown. When nothing of hers appeared it was because a larger amount than usual had appeared on the previous day or because of press of matter on that day. It was that which I had in my mind when I objected to any hard and fast rule being laid down as to Mrs. Smith's contributions. On 19th May I received the following letter:—

19th May, 1891.

WALTER DENING, Esq., "Japan Gazette" Office.

SIR,—I am instructed by the Board of Directors of this Company to state to you that, having taken into consideration your letter of yesterday's date, they have determined to abide by the decision previously arrived at, and which was communicated to you in my letter of 15th inst. I am further instructed to forward you the accompanying cheque for Two Hundred and Fifty dollars in payment of your salary to the date of your dismissal.

I am, your obedient servant,

(Signed) THOMAS WATSON, Secretary.

I received the cheque for $250 on the 20th. I went to the office at 8 o'clock. I informed Mrs. Smith that it was the desire of the directors that she should have a column of matter in the paper, and told her that I had resumed my editorial duties. I prepared some things which were publiished in the morning paper, but afterwards one of the Japanese printers told me he had been instructed by the manager not to print anything more of mine. I tried to get a statement but without avail. I asked Mr. Littlewood, but he said he must consult Mr. Lowder, and after doing so he told me he had been forbidden to give the information. I then wrote to Mr. Lowder the letter dated May 20th:—

"Japan Gazette" Office.
Yokohama, May 20th, 1891.

The Chairman of the Board of Directors of the Yokohama Printing and Publishing Company (Limited.)

SIR,—I write to ask whether you, in your capacity as Chairman of the Board of Directors of the above named Company, have written to instruct Mr. Anglin, the Manager of this Office, not to print any copy prepared or revised by me. If you answer in the affirmative, I should be obliged by your furnishing me with a copy of the said instructions given to Mr. Anglin in reference to copy furnished by me. I am, Sir, yours faithfully,

(Signed) WALTER DENING,
Editor of the "Japan Gazette."

To this Mr. Lowder replied.—

20th May, 1891.

Sir,—I cannot acknowledge your right to the information asked for in your letter just received.

Yours faithfully, (Signed) J. F. LOWDER.

W. Dening, Esq.

On May 21st I wrote as follows:—

"Japan Gazette" Office,
Yokohama, May 21st, 1891.

The Secretary of the Yokohama Printing and Publishing Company (Limited).

SIR,—I have to acknowledge the receipt of your favour dated the 19th instant, with cheque enclosed for $250. I receive this cheque only as a payment in advance of one-half of my salary for the current month made by the Directors of their own motion, and I shall ask to receive the other half in due course, with regular payments as usual thereafter. I wholly deny that I have given cause to the Directors to cancel my engagement, and I protest against their arbitrary assumption of power to vacate at will my contract with the Company. That contract is still in force, and performance thereof on my part is only prevented by the present unwarranted interference of the Board of Directors.

I beg respectfully to inform the Company through its Directors that I shall maintain my rights against it by such means as I may be advised. I am, Sir, your obedient servant,

(Signed) WALTER DENING,
Editor of the "Japan Gazette."

On May 22nd the directors replied:—

Yokohama, 22nd May, 1891.

Sir,—I am instructed by the Directors of this

Digitized by Google

Company to acknowledge receipt of your letter of the 21st inst. and to say in reply thereto that they have nothing to add to communications that have already been addressed to you on the subject of your dismissal. Understanding that you still continue the use of the rooms hitherto occupied by you in the "Japan Gazette" Office, I am desired to request you to vacate them at your earliest convenience, as they are required for the use of the Company. I am, your obedient servant,

(Signed) THOMAS WATSON, Secretary.

My reason for putting repeated questions to the staff was that I did not know what legal action the company would take. I did not consider myself legally dismissed. I have received nothing since the receipt of the cheque for $250, nothing for my work between the 15th and 20th. I have no employment to speak of. I have tried the Japanese Government for employment. I did not succeed. I have no employment on the *Mail*. I have no newspaper work whatever. I see no prospect of employment.

Cross-examined by Mr. Walford—The nature of my employment is only instruction to a private pupil one or two days each week. The pupil was an old friend, and I go to Tokyo to teach him, having leisure. Nothing has been settled, but it may represent 60 *yen* a month. I have not tried to get pupils. I have made no endeavour—naturally—to contribute to the *Mail*. Mrs. Smith was my sub-editor, so named by the directors. She was at first simply called regular contributor. I made several complaints about her writing. I thought her inaccurate. I consider it important to be accurate. I am so myself, as far as possible. I am an Englishman; it is for others to judge whether I have a good knowledge of English. I have had a long experience in the use of it.

Mr. Tison said this looked like incompetency, and if incompetency was the plea it must be pleaded.

The Judge said if it was incompetency, that plea ought to have been put in.

Mr. Walford said he did not intend to bring forward that plea.

Witness—I am not prepared to answer the question whether I think the letter of the 15th a dismissal or not. I thought at that time it was not a dismissal. I do not think the letter sent to me by the Secretary on May 15th was a dismissal. In the letter of 13th May I did not think the word "desire" meant an order. I can suggest other ways of conveying an order; it might be "we order or command." I do not think it is a question of politeness or not. I did not refuse to put the column into the paper. I said the desire expressed was one rather difficult to carry out. I do not consider that I refused to put a column in. I answered that it would be an interference with my duties and powers as editor. I do not say it was a wish; it was a desire, and if carried out would have interfered with my powers. My powers were given by the agreement and the whole 32 letters which preceded it. The letter of 8th November is no doubt in reply to a letter of mine, probably expressing anxiety as to my relations with the manager. The letter shown me dated November 7th is the one I wrote. (Letter put in which plaintiff said he rather fancied Anglin might find it rather hard, after running the whole office, to confine himself to a small section, and it might be as well that he should be told that the sub editor, the other foreigner, and the translator would be under plaintiff's control.) What I feared was that Mr. Anglin would be interfering with me. I afterwards expressed myself as willing to carry out the "desire" already mentioned. It had actually been carried out all along. The contribution by Mrs. Smith the day I went away had, I think, been through my hands. I do not recollect to whom I gave it. I did not tell Mrs. Smith then that she had a column at her disposal. I did not tell Mrs. Smith the paper was in her hands while I was away. I had told Mr. Littlewood that he was to see all that Mrs. Smith wrote—to see that there was no bad spelling, &c. I do not recollect, but probably I gave him such material of hers as was to go in. Before I joined the paper I do not think I had a large experience with newspapers. I told Mr. Lowder I had 7 years' experience as a proof-reader and that proof reading came very easy to me, and that I was willing to do a very large amount of work of all kinds. I do not recollect whether I wanted only one foreigner; I certainly wanted a force sufficient to run the paper efficiently. I may have said I would be satisfied with one foreigner, but I expected then that the Manager would be able to do more: to read all but the more difficult proofs. The letter shown to me of October 25th is mine; it says that two foreigners in addition to Mr. Anglin were not needed. That referred to a previous letter as to the engagement of Mr. Nuttall. The letter says that Nuttall and a Japanese shorthand writer would be quite ample. I had no special reason for naming Nuttall, but he had had long newspaper experience, and I thought he would help me in writing, proof reading, and general newspaper work. I cannot say that I had as a whole a good opinion of Mr. Nuttall's writing. I wrote "as a writer he is of little use." When I joined I had no assistance from Mr. Littlewood. I found that if they required a much fuller and better paper we should have more assistance. It all depended on the quality of paper required. I found it inconvenient when Mr. Littlewood was out reporting. I expressed an opinion to that effect, and I may have given the directors to understand that I wished some one else. The lines of the prospectus were the lines on which I was working.

Had you not been strictly instructed not to bring yourself into conflict with the *Mail*?—No.

Had not that subject been brought up before you?—It had been brought before me.

The desire of the directors was expressed that you should not bring yourself into conflict?—The opinion of Mr. Lowder only was expressed, and it differed on different occasions. We have already a quotation from one of his letters in which the the *Mail* is to be killed.

Did not Mr. Lowder instruct you, or express a desire on behalf of the directors, that you should not come into conflict with the *Mail*?—He expressed different desires on different occasions; he expressed both that desire and the opposite.

You did come into conflict with the *Mail*?—Yes, or rather the *Mail* came into conflict with us.

What was the result of that conflict? Was it creditable to you or to the *Mail*?—That is for the public to judge. I remember the letter in which I was complimented on the improved tone of the paper. After that letter Mr. Lowder called upon me and discussed the matter of Mrs. Smith's engagement. He told me several complaints had been made about the paper. He said it was heavy and required a lighter touch.

And he suggested that Mrs. Smith give it the lighter touch?—Yes.

You objected to her on the ground of her being a lady, and at the same time agreed that she did write pleasantly?—Yes. Eventually my first objection to her was removed and she was engaged. She entered upon her duties on I believe 16th Feb. On the 21st February I remember writing a letter of complaint about her, having written a private letter to Mr. Lowder on the 19th:—

"Japan Gazette" Office
Yokohama, February 19th, 1821.

My dear LOWDER,—* * * I shall wait till Saturday and then write about Mrs. Smith!! I fear that as a permanency she will not do. It is a sore trial to me that neither she nor Littlewood can be trusted to see original writing through the press with the certainty of no grammatical mistakes.

Mrs. S. seems helpless at business subjects. Sentimental writing is her forte, but we can't have too much of that. More about this anon.

Yours very truly,

(Signed) W. DENING.

You complained about her spelling?—Yes.

How do you write forte?—Have I made a mistake?

How do you think forte should be spelt?—Fort. I wrote to Mr. Lowder on February 21st as follows:—

February 21st, 1891.

My dear LOWDER,—Herewith my epistle about Mrs. Smith. I am decidedly of opinion that she will not suit our purpose for any length of time, and that we can do better with one hundred *yen* a month. Here are the results of a week's experience. (1). She cannot be trusted in the matter of spelling, grammar, punctuation, and proof reading. The latter she may improve in. (2). She can only write things of the style of "Splashes of the Pen," which even then have to be altered and cut down very much. Ordinary business things she dresses up so much that they look ridiculous and are no longer accurate. (3). A still more serious drawback is that she objects to go about and get information, &c. I offered her a reserve seat ticket for the concert. She said that she could not go without her husband, and that he could not afford to pay for a ticket. I replied that I would go myself. To-day I asked whether she could go to Tokyo and write a description of the funeral ceremony on Wednesday next, and her husband came to remonstrate with me for making such a request, saying that Mrs. Smith was sub-editor, and not a reporter, and so on. I told him that I objected to her being called a sub-editor, and that if she was not prepared to go about and get information, that I did not see how she could remain permanently under me, as it was absolutely essential to the success of the paper for one of the staff to attend entainments, &c. Now my idea is this, that without spending any more money (or at any rate very little more money) we might fill her place very well. If he keeps the books well and is anxious to stay on at $100 a month, he can do so. It was about as much as he was getting in Nagoya. She can still write for the home journals and help him in that way. We certainly ought to have a man in the office who at a push could see the paper through without me. It is a tremendous anxiety to feel that day by day and week by week everything depends on me. I don't anticipate being ill, though as a secret I may tell you that I do expect to get married some time in April or May, if I can find time!! I shall probably make the thing known some time next week, till then please not mention it. Littlewood is working well, and he is getting more and more reliable in small matters. How would it be to make him sub-editor later on, and put a cheap man in his place. He is a nice fellow to work with, and very anxious to please. The expense of getting somebody new out from home would be great, and hence it would be better to take somebody on who is here already if possible. I anticipated that Mrs. Smith would not suit. She is very unbusinesslike in little things, which gives me a good deal of extra trouble in my busy hours. It is my wish that after the 3 months are up that some other arrangement be made. It does not work a bit, and never will. These kind of things happen. Littlewood is away reporting. A sea captain comes in, and says, "Please, sir, I should like to give you some information if your reporter will take it down." You can't ask such a man to go to a lady to give his information. There are a hundred and one things that a lady cannot do in this country, that she could do at home. All sorts of folks come to the office, who hush their voices when they know there is a lady next door. These may appear small matters, but put together they give a good deal of annoyance.

Yours very truly, (Signed) W. DENING.

I received a letter from Mr. Lowder on February 23rd:—

February 23rd, 1891.

My dear DENING,—Mrs. Smith has already written to me on the subject of your letter of the 21st, and the enclosed copy of my reply will show you the view I take of the two specific complaints you make against her. As regards that of a more general nature, it must be remembered that she has only been with you for a week; and that if our ability were tested by so short a term of probation, few of us would be found to give satisfaction. At all events, as your letter is addressed to me individually, and not to the Board of Directors, no official action can be taken upon it.

Yours very truly, (Signed) J. F. L.

I then wrote to the Board on the 24th:—

The "Japan Gazette" Office,
February 24th, 1891.

The CHAIRMAN of the Board of Directors of the Yokohama Printing and Publishing Company, Limited.

Dear Sir,—At the special request of the Directors, against my own inclination, I consented to give Mrs. Smith a trial as regular contributor to the paper of which I am the editor. During the eight days she has been working in the office I have had abundant proof that her permanent retention in her present post would not be conducive to the interests of the Company. It is my opinion that even if Mrs. Smith were qualified to act as sub-editor in every other respect, which is by no means the case, owing to local customs, her sex would debar her from doing a great part of the work devolving on a member of a newspaper staff. I therefore beg that the Directors will take steps to make arrangements by which I may have other assistance as soon as can conveniently be managed.

I have the honour to be your obedient servant,

(Signed) W. DENING.

I mentioned the possibility of obtaining Mr. Mason's services. I should have been pleased if it could be done. I next wrote:—

"Japan Gazette" Office,
Yokohama, February 28th, 1891.

My dear LOWDER,—The news is that Mason has received his congé from the Japanese. He was down yesterday, and though he does not wish anything done yet, he would like to join us later on, and my idea is that with such a man we could overcome any obstacle whatever. Mrs. Smith is far too inaccurate to be employed permanently. I spend hours every day in correcting what she does write, and even then, it is not as I should like it. Mason told me to-day that he would be content with a small income as he has money of his own and is expecting a pension.

Yours very truly,

(Signed) W. DENING.

Reference being made to the articles published by Mrs. Smith from the date of her entering the office up to the time the letter of complaint, witness continued—I could not at this time point out exactly what I had to correct. I could not without

Digitized by Google

the manuscript copy. Shown the manuscript of one of the first articles, witness said the corrections there did not represent all that were made.

Mr. Walford proposed to put in a file of the paper with the manuscripts, and hoped his Honour would not cause him to read through all the manuscripts.

His Honour remarked that he might as well hope that Mr. Walford would not expect him to read through them all.

Discussion here took place as to the manuscripts being put in.

The witness (being confronted with "Splashes of the Pen" in the *Gazette* on 17th February) said he could not say whether there were not other "Splashes of the Pen" in his possession when he said Mrs. Smith could only write things in the style of "Splashes of the Pen." I do not know, he said, that my statement as to her unbusinesslike qualities was founded on anything she had written. The note shown me as to Reynell's case was written by her, but I do not know whether it was supplied by me or not—I think it came to me from Mr. Masujima, with all the business terms in writing. (Mr. Walford here read the manuscript, while the Court looked on one file and the witness and his Counsel looked at another and checked the language, pointing out such corrections as "direct trade" for "free trade" "has" for "having," "actually," for "really," the insertion of "about" before 10,000 *yen*, "authorities" for "dock" and so on.)

Mr. Walford asked in what respect was the note not a fair one.

Witness—The alterations made must have been to secure accuracy. I must have had the statements of the native papers before me at the time and I cannot say now whether it was inaccurate.

His Honour thought all this was like crushing a butterfly with a sledge hammer.

Mr. Walford said this was part of the defence—that Mrs. Smith had been misrepresented to the directors by Mr. Dening, when as a matter of fact she was doing good work.

Witness—I can say on comparison that there is nothing untrue in the manuscript of Mrs. Smith. I remember "The Social Departure" reviewed by Mrs. Smith on 25th February, the opening part of which was corrected by me. The manuscript came to me first, but I did not always correct it; if I was pressed by work I left the correction till it came to me in proof. In an article on "India-rubber," taken from another paper, and worked up by Mrs. Smith, I corrected an expression of hers in the weekly. I may have complimented her on the protest "Still they Come." I wrote a private letter to Mr. Lowder on March 14th as follows:—

March 14th, 1891.

My Dear Lowder,—I am afraid you will think I am a troublesome man, but I assure you that I have the company's best interest at heart when I write about Mrs. Smith. Her work is less and less satisfactory. If she gathers facts out of the home papers she spells the names of writers and places wrong. She cannot spells some of the simplest words. She actually had lion spelt lyon to-day. Now I would infinitely rather have $50 a month to pay for really good articles at $5 a column than have somebody that is not reliable. Her style I can't endure. She hates simplicity and always tries to dress everything up till it looks utterly ridiculous, instead of saying "he who desires the gratitude of his countrymen" she writes "he who desires to bring his grey hairs down to the grave weighted with the most elaborate gratitude of his countrymen." These are her own words in a piece of composition which lies before me. As literary composition this is consummate rubbish. Yet it is a fair example of her style. The things that I published of hers have to be corrected throughout. Now, while I am correcting I could write something better still myself. The whole business is a losing job, and I do beg of you to take some action. It is waste of money to pay her $100 a month. This sum represents 12 or 15 good leading articles worth publishing, which I could easily get, or the employment of a good man like Mason. If you wish another official letter, I will write one. If she must have her three months' notice, by all means let us give it. The success of the paper depends on our laying out what money there is to spare in the best way possible.

In haste, yours very truly,

(Signed) W. Dening.

I wrote to the directors also on March 16th:—

"Japan Gazette" Office,
Yokohama, March 16th, 1891.

The Chairman of the Directors of the Yokohama Printing & Publishing Co., Limited.

Sir,—I venture, in the interests of the Company, to address you again on the subject of Mrs. Smith. As you are aware, she has been appointed to act as sub-editor. Having given her a month's trial, I find that she is not competent to fill such a post. The duties of a sub-editor may be briefly summarised under four heads:—(1). The drafting of notes or reports from material supplied; (2) Proof-reading; (3) The preparation of epitomes of home news; (4) Such original writing as the person filling such a post may be qualified to undertake. Mrs. Smith has performed none of these duties to to my satisfaction. She spells badly; her grammar is extremely incorrect, and she quotes the words and opinions of other writers in a most inaccurate and slipshod manner. As a proof-reader she is absolutely useless. A case occurred a few days ago in which the word lion was written lyon, and was so left by Mrs. Smith after two perusals. Mrs. Smith, I am ready to admit, has written some clever things in her life time. A certain class of writing she can manage very well, that is, if there is anyone at hand to correct her grammar. But the class of composition in which she excels is only very occasionally required for a newspaper, and she, having no special knowledge of any purely local subjects, when it is considered desirable to lighten the paper by introducing such writing, it would be far preferable to draw material from the literary productions of master-pens, when no correction of grammar is required and no inaccuracy of facts is to be feared. With all due deference to the Directors, I beg to point out that the retention of Mrs. Smith on the staff of the "Japan Gazette," for the reasons stated above, cannot but seriously injure the reputation of the paper. It is quite impossible that inaccuracies can be avoided if the sub-editor of a paper is entirely unreliable.

I have the honour to be your obedient servant,

(Signed) Walter Dening,
Editor of the "Japan Gazette."

Upon that letter Mrs. Smith was dismissed. More business writing is wanted than she could supply. She had tried. She had written some business notes, but I cannot specify them. I knew she was there to lighten the paper. She had a room next to mine. The home papers were handed to her and she used them. They were kept partly in her room and partly in Mr. Anglin's room. She wanted them for home news and mail matter. A great many of the extracts were chosen by myself. I could not specify the proportions of those she extracted. I had done so before she arrived, and some subjects I liked to chose myself. I did not complain in a letter dated 17th April that I had to chose the extracts. I only mentioned it as showing the amount of my work.

Mr. Walford asked whether the plaintiff objected to the letter being read.

Mr. Tison objected, but Mr. Walford insisted and the Court upheld him.

Mr. Tison asked the Court to look at the letter and decide whether, as a private letter, it should be put in.

Mr. Walford said he was quite content that His Honour should read it.

On another letter from Mr. Lowder to Mr. Dening dated 20th April being produced by the defence,

Mr. Tison objected also to it, pointing out that, like the last one, it was opening the door for the bringing forward of a charge of incompetency, which was not referred to in the answer.

Mr. Walford did not press the matter.

Other letters belonging to the same series as the above were also put in, a strong wish being expressed on both sides that they should not be published as personal matters were referred to in them. The prospectus was also put in.

Witness—Before Mrs. Smith joined the Company she wrote to me asking whether her connection with the paper would continue. I said the expenses were so heavy that we could not pay for her writing, but I offered her a free copy of the paper if she would write. She refused. Proofs usually go through three hands before they are published. I am not aware that it is usual to return manuscript. I don't think I returned Mrs. Smith's manuscripts during the first month; probably the manuscripts stayed in her room when she read the proofs. There may have been occasions when she did not see proofs of her articles. I did not tell her she should insert references in the article. I told her she must be accurate. I liked some of her "Splashes of the Pen." I did not stop the contributions, but I stopped the use of the title; I thought it better to use the articles without the title. I believe I told her I did not want any more of that style of writing. She also wrote "Literary Echoes." I also stopped the title of that, but inserted the contributions. I did not in April tell her we did not want any more of them. I asked her at the commencement of her engagement not to mention what she had written, as it was not usual for authors to be indicated. She had contributed to the paper before leading articles and "Splashes of the Pen." I do not recollect saying that she should not write leading articles—as a matter of fact there have been some published—"Chinese Secret Socreties" is one of hers. The article "The *Japan Mail's volte face*" was partly worked up by her, and was objected to by Mr. Lowder.

Adjourned till to-morrow (Friday morning).

## *REVIEW.*

*The Intercourse between the United States and Japan, an Historical Sketch.* By Inazo (Ota) Nitobe. Baltimore. The Johns Hopkins Press.

Considering the difficulty of learning Japanese, and the few English speaking people who have the leisure to attempt the task, we must feel grateful when a Japanese scholar puts the results of his researches into the history of his country in our language. This has been done several times, and it is to be hoped that it will be done still more in the future by some of the numerous bright Japanese students perfecting their knowledge of English in American and English universities. With their ready command of this tongue they are the only English-using writers, except perhaps a score of English and American scholars, who can thoroughly investigate all the original authorities on any Japanese subject.

Lately the above work was issued from the press of a great American University. The author was thoroughly fitted for the task. He had had the benefit of the liberal aids for acquiring English provided in his native country. Afterwards he studied for several years in America, and about an equal number in Germany, finally receiving there the title of Doctor of Philosophy. It seems almost needless to say that he uses English as though it were his mother tongue.

Among the many points of interest in this work, we can note only a few.

True to his historical training at great universities, our author starts with the earliest beginnings of intercourse between Japan and outside lands. Leaving out the traditions of communications between Japan and Persia in the eighth century, and Japan and America through a legendary traveller in the thirteenth century, history first—according to Mr. Inazo, though other scholars do not endorse his view—reaches solid ground in the touch between Japan and Korea in the second century B.C., and to this dim source may bet raced the sponsorship of Japan at the opening of Korea a few years ago. What America once did for Japan, Japan did for Korea. The parallel seems very fitting in several respects; the attacks of the Korean Moho, the indemnity for these outbreaks, and the return of the indemnity out of sympathy.

Although only a few words are given to the relations between Japan and her immediate neighbours on the mainland, China and Korea, yet the fullest testimony is borne to the value and importance of this relation. To these near sisters, Japan is indebted for her "literature and science, art and industry, religion, and philosophy, law and administration."

Her touch with the Western world commences in a way that brings together Europe, Japan, and America—very appropriate to refer to at this time when the people of the United States are making such preparations for the vast Columbian Exhibition. Marco Polo, a celebrated Venetian traveller in the 13th century, in his wanderings through Asia, heard of Japan (Chi-pan gu), and wrote a most extravagant account of the quantities of gold in that land. Columbus is said to have read and pondered over this report, and in consequence, when he came upon one of the West Indies, he thought he had reached this Eastern El Dorado. But neither Columbus nor Polo had the pleasure of seeing those palaces paved and floored and roofed with gold. The first European, so far as known, to enter this island home, was Fernao Mendez Pinto in 1542. As illustrating the depths to which Chinese roots have sunk in Japan, we note that this first Occidental to set foot on this soil made known his object through the Chinese language. The Japanese traced their questions in Chinese characters on the beach, and a Chinese in Pinto's party made answer in the same way.

Although the English made early efforts to get permanently established here, they could not successfully hold their own against their active competitors, the Dutch. In some ways, Japan seems more indebted to the Dutch than to any other European country at this early period, nor did this friendly help cease then. William II. of Holland, in 1844, wrote to the Shogun, calling his attention to the opium war in China, and warning him to be prepared either for defence or for opening his country. The Dutch also gave notice of Perry's expedition, and it was largely through the medium of the Dutch that Perry held his Conferences.

Japan's first knowledge of the "arts of engineering, mining, pharmacy, astronomy, and medecine" as studied then in Europe, was also derived from the Dutch.

But of all western nations, Spain left the deepest impression on the subsequent history of this country. The influence of the others had been chiefly of a material nature, in imparting the rudiments of the commercial and industrial arts, but through her propagandists Spain introduced Christianity. The results of the consequent persecutions on the happiness and progress of the people cannot be calculated. This faith came through Francisco Xavier in 1549, and almost like a wild fire swept through the land. Considering the slow spread of Christianity at present, it is interesting to learn the views of a historical scholar as to the reasons for its rapid propagation at this early day. This growth was chiefly due to the high character and great gifts of Xavier, the irreligious state of the populace and the protection afforded by Nobunaga, the Shogun of the time. In twenty years, the number of converts reached three hundred thousand "in the highest and lowest walks of life." After fifty years the adherents counted up to nearly two millions. But relentless persecution came on, and in another half century "Catholicism disappeared from our national life, surviving till the present era only in some of the retired villages." The causes of this complete revulsion of feeling are very diverse, but Professor Inazo seems to think the Christians had only themselves to blame for this overthrow and destruction of their faith. He also notes the opinions of others that this stain on Japanese history was due to fear of Spanish domination, to the intrigues of English and Dutch traders, and to Buddhist instigation.

The feeling called forth by this event that has been full of consequences to Japan. It was the spirit of distrust and suspicion that prompted Japan to her *exclusive* and *inclusive* policy. Isolation was not her national character. A rapid sketch of her intercouse with foreign countries shows that this was not her policy. She had opened trade with other lands, she had allowed missionaries to enter, she had kindly treated foreigners wrecked on her coast, and her sons had gone abroad for business and pleasure. But it was this bitter experience with an alien religion that drove her to the long seclusion of several centuries. Had the conduct of those early Christians been wiser and more conciliating, Japan would probably have embarked on the current of Western life and thought three hundred years ago.

America came to these shores the last of the Occidental peoples but she has become first in the regard of the nation. Perry was informally preceded by several vessels, one coming before the close of the last century. Two or three times slight steps were officially taken looking towards such an expedition as Perry's. As far back as 1832 an agent was appointed to negotiate treaties with Oriental countries. Again in 1846, Commodore Biddle, bearing a letter from President Polk to the Emperor, sailed into the bay of Yedo and remained there ten days, trying to establish trade relations with the Japanese. But his request for commercial privileges was curtly refused and he was advised to "depart immediately" and not come again.

Finally Perry came, but his aim was not entirely of a peaceful commercial character: it had more of the protective spirit in it. American whalers had often been wrecked and cast upon Japanese shores, and in some cases they had been treated with great rigour. Besides, many million dollars, some say seventeen, had been invested in this industry in the seas of China and Japan. It was for the guardianship of these bold fishermen and this large capital, that Perry entered the Bay of Yedo. Mr. Fillmore, then President of the United States, afterwards in an address seemed to think that it was sympathy for these marine interests that chiefly moved the Americans. Our author holds the same view, for he gives the honour of the event to the "humble American whalers." For where more fitly could the idea originate than in the "dark dungeons" where they lay "longing for home and heaven?"

Without any possibility of knowing it beforehand, Perry came at a most opportune time. Under the teaching of history the Japanese had been led to see that the Emperor should be the real as well as formal head. They were aroused to cast out the usurping Shoguns, and return to the early conditions when all were directly under the Emperor. This spirit was destined to bring on a civil war, whether any foreigner knocked for entrance or not. If the American envoy had sailed sooner, the temper of the people would not have permitted the Shogun to carry out any engagement: if he had come later, he would have found the land torn with a civil war.

It was at this auspicious time that the American flag floated before the eyes of the Japanese. Perry emulated the Orientals in reserve and leisurely dignity. He refused to meet in person any officials except the highest. All others were received by his subordinates. The conferences were conducted in Dutch, Chinese, and Japanese.

Perry was evidently a born diplomat of diplomats, if grandiloquent dust-throwing is a prime qualification for that profession. He told the Japanese that "Americans are people of few words and they always mean what they say." Our author humorously remarks that "as he did not take with him the *Congressional Record* to verify the contrary he made good his word by his reserved demeanour."

After Perry had successfully opened the door, Townsend Harris went in and completed the work. He stands next to Perry in this momentous period, if, indeed, his influence has not been of greater importance to the happiness of the Japanese. So highly were his services valued by the Japanese that the United States Government was formally requested to prolong his stay in Japan. What he accomplished he did peacefully and mildly, and he won the confidence of the nation; unfortunately, no adequate memorial of him exists, even his papers have not been published. His name is not often heard, but his work was silent and beneficent.

But, against his own sense of right and justice, he has been the father of the most vexed problem in Japanese politics. It was he who first introduced into the treaties the clauses relating to tariff regulations and extra-territorial rights. He often declared he did so against his own conscience, but it was a necessity so far as extraterritoriality is concerned. As early as 1855 the American Secretary of State had condemned such a provision as interfering with the municipal law of a country, but he thought it must be inserted in any treaty with an Oriental country in order to get the consent of the American Senate for its ratification.

In this connection a temperate statement is given of the troubled question of treaty revision, and a short historical sketch of the efforts made in that direction. In a foot-note an amusing incident is told as illustrating the pratical workings of extra-territoriality. A young lady, possibly an American, was accused of abstracting some article from a jeweller's shop. The Consul after hearing the case decided that she had not been guilty of so common a thing as thieving, but her crime was only "a form of kleptomania," and discharged her. The poor Japanese jeweller could only hang a large placard in front of his shop stating that "among the late arrivals from abroad a germ of a most dangerous disease is discovered."

On the subject of diplomatic relations, high tribute is paid to the United States and her representatives here. American policy in the East has always been characterised by a spirit of fair play, and the United States has at all times been prompt to accede to any proposals Japan may make so long as they are "within the bounds of reason and justice." Judge Bingham during his thirteen years as Minister in Tokyo in many ways showed his warm friendship for Japan. He broke loose from the diplomatic cooperation and defended the right of the Japanese Government to issue "Customs regulations without consulting the foreign Consuls." He also upheld Japan's right to quarantine vessels during a cholera epidemic. Numerous arts of similar friendliness make it true that, "in the breast of every Japanese is implanted a deep feeling of goodwill to America, and it is literally true that to be an American is to be loved and respected."

With regard to American religious influence in Japan, the same unreserved commendation is not to be seen. "Indifference to religious truth is considered a deplorable feature" in present Japan. The Japanese have but little "regard for religion in any form or with any formula." With such an open field before them, why have not the missionaries been more successful? Our author seems to think the reasons are about the same as for the overthrow of Christianity in the seventeeth century—failure is largely to be laid at the doors of the Christians themselves. The missionaries are often inexperienced, scantily educated, sectarian in their views, and repellant in their contact with the Japanese. He alleges that there is good ground for Mr. House's statement that the views of the missionaries are "superficial, one-sided, utterly selfish," but in this respect he is guilty; we think, of a great injustice. He regrets that there is so little intercourse between missionaries and Japanese, and again approvingly quotes Mr. House, "To look down upon the heathen was in a great measure what they had come to the East for." It is probably due to the immaturity and slender intellectual training of many of them that the "field of mission activity confines itself to the lower strata of society." But on the other hand, Professor Inazo thinks the missions have conferred "inestimable benefits" on the civilization of the land. The good done by them has been chiefly moral in transplanting to the East "the idea of a Christian home," and it is likely Christianity will ultimately conquer in one form or another as "notwithstanding the small results of their labours, the missionaries by their zeal and perseverance have become a power in the land."

A few pages are devoted to short notices of works on Japan by Americans. The "Mikado's Empire," by Dr. W. E. Griffis, is pronounced to be by far the best. Others are impartially mentioned and some with praise. But on the whole, Americans have no reason to be proud of their scholarship on Japan. With few exceptions it is neither accurate nor painstaking. For scientific care and research, readers must go to the writings of such Englishmen as Satow, Chamberlain, and Anderson, and such Germans as Rein, Liebscher, and Siebold.

## *LETTER FROM CINCINNATI.*

(FROM OUR OWN CORRESPONDENT.)

Cincinnati, May 27th.

I have been in this city just a week, and leave to-night. I cannot say that I should care to live here; for it is very dirty and smoky, at least in the *shita-machi*. It seems as if I had been running small coal mines in my nose, mouth, ears, and under my finger-nails. Even as I write, the smuts come flying in at the window, and settle all over the table and paper. I suppose, however, that it is better in the *uwa machi*, say on Walnut Hills or Mount Auburn, or in the suburbs. I rode up on the hills the other day, and found handsome houses, with green lawns and beautiful yards, and every sign of comfort and convenience. I happened once to go up that hill where about two years ago the electric car, just as it reached the top, broke loose, and came flying back down the hill to carry all its passengers except one to a dreadful death. It is, certainly, an awful place, and made me feel more or less nervous until I was once more safely at the foot of the hill. Now they claim, that, with two cables and a "dog," it is perfectly safe. Evidently, the hundreds of people who every hour ride up and down there consider it secure.

That is the line to take to the Zoölogical Gardens, which, an ardent Cincinnatian informed me, are the best,—not only in the United States, but in the whole world, London and Paris not excepted! Well, there is a large and rare collection of "critters" from all parts of the world; and, as I have no means of instituting a comparison, I leave the matter there.

Cincinnati is well provided with street cars of all kinds—horse, cable, and electric—to pull people around the city and on the hills. Sometimes all three kinds may be seen running on the same track. There are also a number of "put-a-penny-in-a-slot" contrivances. One of these is a pair of scales on street corners: I stood on one of these, but could not move the pendulum until I dropped a cent in the slot; then I saw my weight in a flash. Great is the inventive genius of man!

By-the-way, have you heard of Edison's latest wonder, which he intends to exhibit at the World's Fair? He says that it will do "for the eye what the phonograph does for the voice. It will register the looks and gestures of any person, and then reproduce them at any future time and place. By combining this with the phonograph a man may be seen and heard at the same time, and speeches, plays, and scenes may be reproduced at will. I can place one so that it will command a street corner, and, after letting it register the passing sights for a time, I can have it cast them on a canvas, so that every feature and motion of the persons, even to the twitching of the face, can be seen, and, if a friend passed during the time, you may know it." He also says that "the idea of producing a Shakesperean drama by electricity" has not been abandoned, but "is practically completed, and can be put in order in a short time!" A Chicago daily suggests, that "the Wizard of Menlo Park" will soon discard railroads, and travel by electricity or on the wings of the lightning.

But, to return to Cincinnati, I reached here the last day of the national conference of the Farmers' Alliance. It was a union gathering, composed of a lot of heterogeneous and chaotic elements, such as farmers' associations, knights of labour, people's party, socialists (of all types), greenbackers, etc., etc. I am sorry that I was unable to attend one of their sessions. I was told by a corner druggist that the delegates did not patronize his soda-water fountain very much, but were more at home in the saloon; and that he never, *even* in Cincinnati, saw so many patrol waggons out pick-

Digitized by Google

ing up the unfortunates who had fallen by the way side! Perhaps, that explains why they neglected to put a prohibition plank in their platform.

Well, after considerable wrangling between Ignatius Donnelly, of Minn. Weavour, of Iowa, "Sockless" Simpson, of Kansas, and others of rural fame, they organized a new party, called "The People's Party." They formulated a formidable platform of reform, and claim, of course, that they will carry the next Presidental election. But it is difficult as yet to make any prognostications; it looks, however, as if this farmer's movement would be as short-lived and futile as all previous ones. But it may live just long enough to defeat the Republican party in the next election; for it will draw more from the Republicans of the West than from the Democrats of the south. There are some signs of a breaking up of old party lines.

This has been a fortnight of conventions. Beginning May 18th, the Baptist hosts of the Northern States met in this city for their anniversaries. The Women's Home Mission and Foreign Mission Society, the Publication Society, the Missionary Union, all held sessions, lasting together till yesterday. The Baptist missionaries of Japan were not represented by a single one of their number, only two young men, who had been, not organically, but sympathetically, connected with the work. But the committee on Japanese missions unanimously and heartily endorsed the appeal for $25,000 for the establishment of a boys' school in Tokyo. Then a gentleman arose, and announced that he knew where just that amount was ready to be given as a memorial fund to the cause of foreign missions.

The most striking feature of the Baptist meetings was the presentation of a "chapel car," named "Evangel," to the Publication Society. It was the gift of half a dozen rich men, to whom the plan had been suggested by a minister. The car contains, in one end, accommodations for the missionary who has charge of it; in the main part of the car are seats for from 75 to 100 persons, and an organ. This car will be carried, absolutely free of charge, on the Northern Pacific and Wisconsin Central line. It will stop, for instance, at a small town or village where there is no place for a meeting, and will be itself available for a meeting on the side-track. It is really, you see, quite a novel method of evangelism, and is sure to be imitated by other denominations and on other railroads. It seems to be a plan which promises wonderful results in the work of spreading the Gospel.

On May 21st began the one hundred and third Presbyterian General Assembly of the United States in Detroit, Mich. Rev. Dr. William H. Green, of Princeton Theological Seminary, was elected Moderator. I have not seen inthe papers the name of any delegates from Japan; but I have observed prominent mention of Mr. W. A. P. Martin, of China. The vexed question of the revision of the confession of faith came up the second day, when the committee handed in a report recommending certain specified changes. But, as the report of the committee was ordered to be sent down to the presbyteries, the battle was postponed till another year. The now absorbing topic is the trial of Rev. Dr. Briggs, of New York, for heresy. His colleagues in the Union Theological Seminary, and ministers throughout the country, have expressed confidence in his orthodoxy. The trial, which may have already begun, will be of great interest.

The papers to day bring news of the sudden death of Rev. Henry J. Van Dyke, D.D., of Brooklyn. He had just been elected to a chair in the Union Theological Seminary, and was one of Dr. Brigg's warmest supporters. He has been one of the most prominent and famous men in the Presbyterian Church. His sermon on "The Character and Influence of Abolitionism" made his fame.

The same papers contain an item from Portland, Oregon, to the effect, that "nine Japanese women, who were brought to this country on the steamship *Pemptos*, and who were refused a landing at San Francisco by the custom's officers on the ground that they had been brought to this country for immoral purposes, were brought before U.S. Judge Deady to-day on a writ of *habeas corpus*. Judge Deady ordered the women set at liberty." It is sincerely to be hoped that there is no truth in the suspicion.

The World's Fair directors declined to accede to the demands of trade and labour representations concerning the minimum rate of wages, hours of work, etc. They are reported to be alarmed at the proposition "received from a professor in the University of Tokyo, Japan" (presumably your Prof. Milne) "for at least 200 square feet of space in which to demonstrate the operation of earthquakes." But, as Chicago purposes to have every possible novelty, I doubt not that the professor will have a chance to bring over some earthquakes!

When I was in Chicago on my way here, I had an opportunity to run out to Jackson Park for a few minutes. The workmen are busy digging up, dredging, and in every way spoiling that beautiful park, to get the place in readiness for the World's Fair buildings. It is, at any rate, a very fine location.

There is no great change in the matter of "strikes," since I wrote last. The crop reports, in spite of more frost in some localities, are pretty encouraging. And, as R. G. Dun & Co., report that "trade is improving," we may, perhaps, hope for better times for both employés and employers. About the middle of the month, however, forest fires, raging in Minnesota, Wisconsin, and Michigan, caused considerable damage to property.

There is no news yet from the *Itata*, the Chilean privateer, which the *Charleston* is chasing. The latter ran into Acapulco, and accidentally met the Chilean gunboat *Esmeralda*, but did not engage in any conflict. As the *Esmeralda* was trying to obtain coal at Acapulco, it is surmised that she transferred her supply to the *Itata*, and hastened the latter on her flight. It seems now to be a race between the *Charleston* and the *Itata* to the Chilean coast.

Ex-Senator Blair, of New Hampshire, has not yet been assigned a foreign mission. His successor, Dr. Gallinger, by the way, boasts that "he has set type in nearly every newspaper office north of Mason and Dixon's line and between Maine and the Mississippi."

The U.S. Supreme Court has unanimously affirmed the constitutionality of the Kansas "Original Package Law," and also held that it is unnecessary for Kansas to re-enact its prohibitory law after the passage of the Congressional Act. You will remember, that even in prohibition States, liquor could be sold in "original packages," and was sold in that way to an enormous extent. But since Congress has passed an Act forbidding any interference with "State rights" on that question, prohibition was once more enforced. And now, by this decision of the Supreme Court of the land, prohibition has scored a victory, and will advance its cause.

The latest news from Newfoundland announces that the legislature, last Saturday night, with closed doors, passed a local coercion bill, whatever that may be, and that the public are highly indignant. The Governor's proclamation of a holiday in honour of the Queen's birthday, was disregarded, and all the business places were open. The Colonial building flagstaff was cut down; and an attempt was made to burn down the royal standard flagstaff at Government House. If these reports are true, there is reason for much anxiety.

## *LETTER FROM BOSTON.*

(From our own Correspondent.)

Boston, May 22nd.

The burning political question of the hour in the opinion of some heelers and speculators (for office) is whether or not James G. Blaine, our Secretary of State, is a candidate for the presidency in 1892. It is not an easy matter to determine, especially when J. G. Blaine himself, apparently, is on the fence—a picket fence, if it be true that he has expressed himself as reported. He is now hot for the race, and now is interested only in the success of the present incumbent. Mr. Blaine has been ill in New York several weeks, and is still in the grip of the rheumatism. Perhaps on account of his helplessness, the papers have improved the opportunity to put him into the presidential race, or to rule him out as suited them, knowing that his sharp eye and sharper pen could not do immediate justice to rumour till it had settled into apparent fact. But it is of the greatest importance (to some) to know how Mr. Blaine stands. Will he leave the field to Harrison, or will he enter the lists again (if he has a chance)? If he does he may have the same opponent who defeated him before by less than a thousand votes. Naturally, Harrison's friends wish the matter settled as soon as possible, as they are beginning to build the foundation of Harrison's nomination.

President Harrison has just completed what is called a remarkable journey. Certainly, there is one thing remarkable about it, namely, the cost of it, nearly $200,000, if report be correct. He has "swung around the circle" from Washington south, west, north, east to Washington again, and has made more speeches than any man living or dead ever attempted in the same time. An administration paper says of the trip: "A spontaneous feeling of manly hospitality and chivalry existed throughout the south, west, and north. Everybody realized that he (Harrison) was a far greater and abler man than he had been credited with being, and his simple manner, sincere warmth, and ready appreciation of everything he saw, made a wonderful impression. The President travelling through all this wild region and meeting all kinds of people, refused to have an escort of any kind. There was not a revolver on the whole train. Governors of States offered to send an escort, but the President declined and said that he was as safe as anybody."

Our pension office is up again for correction and discipline. Corporal Tanner, former commissioner of pensions, was probably the greatest fool ever elevated to high office. After bringing the office into disrepute and ridicule, he was removed, and George B. Raum appointed in his place. Raum was investigated by the last congress, but is still in office. The present difficulty is with Geo. B. Raum, Jun., son of the commissioner (a whole family of Raums is in the pension office) who has been found guilty of such irregularities that he was removed. Meanwhile Tanner is getting $40,000 a year as pension agent. It appears to be more lucrative to be a pension agent than an honest pension commissioner. If Tanner had stayed in office every soldier might have had a carriage and span and a brown stone mansion as long the "surplus" lasted, but there is no danger now, for the surplus has dwindled, and Raum is commissioner and Tanner is agent working for himself. With these worthies between the treasury and the soldier, the soldier may be thankful if he gets the pittance that rightfully belongs to him.

The "Italian episode," or its result, is still with us. It is hoped that it may soon drop out of the daily budget of news. Mayor Shakespeare of New Orleans excites afresh the fury of the Italian monachy by recommending that the exequatur of the Italian consul in New Orleans be recalled. The Mayor in his letter to the Governor, says: "If, as Italian consul, Mr. Corte has ever had any usefulness here, he has outlived it, and has become through his own acts not only an unacceptable person, but an element of danger to this community, in that by his utterances, he incites his inflamable people to riot or sullen opposition to the laws and customs of the country they have sought as an asylum. Being the depository, as he confessed himself to be, of criminal secrets relating to individuals of his race resident among us, he refuses to give to the department of the police and justice the information he has, and thereby increases the danger to the community from these criminals. For these reasons, I have the honour to request that you ask the Secretary at Washington to obtain the recall of Consul Corte's exequatur by the president." Italy will not dare to look us in the face after this snub of one of its consuls. Italy is a good place for Americans to keep away from at this time, but that will be bad for Italy, for Italy is living or has been in good part living on Americans. If any American wants experience with brigands, he need not go to Italy, he may be accommodated nearer home, in fact, at home, at any of the summer resorts on the shore or inland. The professional brigand may learn something from his fellow craftsmen, the keepers of hotels at "watering" places. The Italian episode, however, has drawn attention to every Italian colony in all cities, and it is believed that all are similar to the New Orleans variety. There may be a worthy Italian in this country, as there may be a good apple in a barrel of rotten ones, but, Zounds! We have too many of them and still they come on every ship. The emigrant laws must be amended or we are swamped by the scum of Europe. The persecution of the Jews drives them to our shores in flocks, droves from Russia and Poland. Do they think we want everybody? Do they think that our almshouses are big enough for all Europe! Let them keep their paupers at home.

The Osage Indians are the richest, not only of all Indian tribes, but are among the richest people upon the face of the earth. Their wealth per capita is five times as great as that of the American people, ten times that of the English. Among the trust funds in the United States treasury is one item to the credit of the Osages of $8,147,515, the annual interest of which is $407,376.

The poisoning of Mrs. Barnaby, referred to in my last letter, which has attracted so much attention throughout the country, is still before the people. The grand jury at Denver, Colorado, has found an indictment against Dr. Graves, the man who was Mrs. Barnaby's medical adviser, confidential friend, business agent, and who is given $25,000 by will. The grand jury is still in session, and it is reported that indictments have been found against others, presumably accomplices of Dr. Graves. It be said, however, that there are doubts as to the guilt of Dr. Graves, in spite of the indictment and the fact that the doctor is now in jail with little prospect, probably, of securing bail. If report be true, the trial of the case will be most sensational, and Graves' lawyers promise startling disclosures that will prove a conspiracy against their client.

The cruiser *Charleston*, sent in pursuit of the Chilean man-of-war supposed to have violated the neutrality laws by entering the waters of the United States for supplies of war, has been heard from at Acapulco, Mexico. The commander reports that the Chilean has not been seem. The *Charleston* is coaling at Acapulco, and keeping watch of the *Esmeralda*, the escort of the *Itata*, the Chilean of which the *Charleston* is in search. As the latter had the start, 24 hours or more, and requires less coal than the *Charleston*, it may be presumed that she is far toward home, but it is said that she can be taken in Chilean waters. Our naval squadron on the Pacific coast has been massed at Iquique, not merely to capture the Chilean cruiser, but to protect American interests from danger from the war-like demonstrations of the Congressional party. The rendezvous was formerly at Valparaiso, but American interests are supposed to be safe at Valparaiso. The presence of our fleet in Chilean waters will be costly for the Government, for coal is $22 a ton. The cost of filling the bunkers of the *Baltimore* was $25,000. The further movements of the *Charleston* are waited with much interest.

The third-party movement has developed into a convention held in Cincinnati. Adherents to the old parties see some danger in the organization of this party. The party is christened "The People's Party of the United States." The platform "demands the abolition of national banks; free and unlimited coinage of silver; laws prohibiting alien ownership of land, and recovery of land now in the hands of aliens; taxation not to be for the benefit of one class at expense of another; all revenues limited to necessary expenses of the Government; election of national officers by direct vote of the people, and much more of less import. The old party leaders declare that if a new party is to rise, this is a good time for it to appear, because there is time enough before the presidential election to develop within the new party, antagonistic elements enough to scatter it to the four winds of heaven. Already the new party, at birth, has an element of opposition to the Farmer's Alliance, an element that will attract a part of the Alliance, and estrange other parts. At all events, the political field in the next election will have many interesting parties and performers, acrobats, and crow and fire eaters, and a great many amateur jugglers.

## *RECENT EXPLORATIONS IN EGYPT AND BIBLE RECORDS.*

### Canon Tristram's Lecture in the Central Tabernacle, Hongo, Tokyo.

On the 29th of April last a large and intelligent audience of Japanese and foreigners, many of the latter from Yokohama, availed themselves of the rare opportunity of listening to a lecture before the Christian Evidence Society of Tokyo, by Canon Tristram on Egyptian Exploration as authenticating and corroborating the Scripture records, given in Dr. Eby's Central Tabernacle, Hongo, Tokyo.

Dr. Eby opened the meeting by asking the audience to unite in singing the 100th Psalm, and Archdeacon Shaw offered the introductory prayer. Dr. Eby announced the auspices under which Canon Tristram lectured, and thought no further introduction necessary for one so well known in letters. The Japanese hearers who might not understand English would afterwards be given a resumé of the lecture in Japanese by the Rev. Y. Hiraiwa.

Canon Tristram, a vigorous but elderly man with full white beard, began by saying that when Canon Rawlinson and himself were boys there were but two or three scraps of ancient Egyptian discoveries that corroborated Scripture. Now, by the researches in Nineveh and the multiplied corroborations in Egypt, whole books of the Bible in their historical portions might be reproduced. It was like the opening of Japan, adding a new picture to the world's history; modern research had unearthed whole histories unknown to Homer and Herodotus, that Boswell of the Ancient World.

The effect of this knowledge was marked; for formerly men read the Pentateuch with their own spectacles and with their own short-lived schemes of philosophy, but the spade and photography had now rendered this impossible. Had Bishop Colenso waited twenty years he could not have written his book. In answer to the question;—"Where do all the naughty German philosophers go when they die?" it had been said, "To Oxford." As an Oxford man himself, he might say that there were other representatives of Oxford than Dr. Driver and his collaborators, who would solve all historical data out of their own inner consciousness.

Note.—The publication of this condensation of Canon Tristram's lecture has been delayed in order to have the author's revision, after he had left the city.

The Bible, until recently, was our only book on what we may call primitive man. Now in Egypt there are contemporary records going back according to one authority, to 5004 B.C., and according to another to 4400 B.C. He inclined to the former chronology. The Egyptian records were not historical, but funereal, but while giving the record of the deceased there was so much of contemporaneous incident related as to make them the source of much historical knowledge. Canon Tristram observed that, like the Chinese, their theory of men was the tripartite theory, the body, soul, and spirit. They believed in the resurrection of the body, and hence their extraordinary care for the body, its preservation in all its parts, and the further precaution of numerous figures or effigies of the deceased to help his identification.

The fact that wood kept for 5,000 or 6,000 years as perfectly sound as when first cut down, and the papyrus paper for thousands of years, made Egypt the one land of the whole world where such preservation of records is possible.

In this way the rolls in the cases of the mummies —the whole 145 chapters of their scriptures—"This book of the dead," have been recovered. Paintings of minutest accuracy of detail are to be found. The oldest painting in colours now in existence is a beautiful tablet of a Queen of 4449 B.C. Among the birds represented with the picture of the Queen is one of the red breasted goose. This bird is only found in Siberia. Once or twice it has been found in Europe as late as 1745. Had it not been for this we would have counted it a fabulous bird. It was probably a single specimen borne there by a storm from the north, and was so remarkable as to be commemorated in a tomb of a Queen. There is record also of the conquest of the Sinaitic peninsula by an early king. There are proofs of Egyptian occupation in barracks and temples built for the use and worship of the soldiers. Three thousand troops must have been there at one point to protect the smelting of copper. There is the slag and half roasted copper to this day. Where did they get charcoal from for this purpose? Now there are not a dozen trees in the whole peninsula. Then there must have been forests and brooks. Both have disappeared under the destructive woodman's axe, and Arabia Petrea is all that is left. It is easy to cut down a tree as Mr. Gladstone does, and old institutions as well, without any attempt to supply their place with other and better ones. He warned his Japanese hearers against despoiling their land of its magnificent timber growths. Nothing is more needful to man, than forest growths. He spoke of the age of the erection of the pyramids of Gizeh, by Cheops, 4,235 to 4,000 B.C.; of the Obelisks, 3,034 B.C., and the conquest of Africa to the 2nd cataract; and the assertion of some that there was as great a gap between the Sphinx and the Pyramids as from the Pyramids till now. So much for Ancient Egypt in general.

He came to the dynasty of the Hyksos, or Shepherd kings, who conquered Egypt and ruled from 2224 to about 1462 B.C., or 750 years.

These were the kings that were friends of Abraham and Joseph. Their figures are easily recognisable in Egyptian and Assyrian monuments by their high Mongolian cheek bones, and by their always being represented as booted with turned up toes. To the Egyptians who wore sandals this must have been a distinguishing mark. These shepherd kings were Hittites and built Zoan in Hebron, or Tanis in Greek, or San in Egyptian. The cartouches of three kings were chiselled out of their monuments and those of their conquerors afterwards substituted, but so unskilfully, as to leave the original writing to be recovered. The name in Egyptian, Kitti; Khatti, in Chaldee; Chitti, in Hebrew, shows they were Hittites.

Dr. Wright, formerly of Damascus, now of the British and Foreign Bible Society, and Professor Sayce show that the Hittites were a powerful nation and made a 700 years' successful struggle with Assyria and Egypt for independence and sovereignty. Homer did not know of them. The Bible now becomes a check on Egyptian history and the Egyptian history on the Bible. The first of the Hyksos was the friend of Abraham and the third of Joseph. The Hittites became reduced in the time of Joshua. An incident recorded in Numbers XIII. 33, says of the city of Hebron which was first called Kirjath-Arba or "City of Awa" (Judges I. 10.) "Now Hebron was built seven years before Zoan in Egypt." No one until lately could tell what earthly connection there was between Hebron and Zoan, or why such a statement was made. Now, however, it becomes not only intelligible but a convincing proof of the document recording this fact having been written at that time. For what, anyone might ask, has Hebron in Canaan to do with the building of Zoan in Egypt? But when it is known to have been called Hebron by its Hittite conquerors who made it a camping ground on their way to Egypt, where they seven years later built Zoan, it becomes intelligible, and serves to show the absurdity of the dictum of "higher Critics" that the Book of Numbers was written 1,000 or 1,500 years later by some very clever person indeed, who could supply such incidental data as that. In 1288 B.C. we come to the great epoch-making dynasty of Egypt, the 19th dynasty. A feeble dynasty of priest kings had ruled after the shepherds for about 200 years when there were many rival rulers, as during the time of feudal rivalry in Japan, before becoming united under one powerful Shogun or at the restoration under the Emperor. The first king of this dynasty, Sēti, made a league with the Hittites. A plate of silver three feet by two feet with raised characters recorded this treaty with the Hittites, and lists of some one hundred and twenty-seven cities taken on his way to the Orontes, of which a copy has been found and in the same order as recorded in Joshua. He would be a clever writer 1,000 or 1,500 years later who could reproduce with such exactness the records of both Egypt and Canaan.

The King of the Hittites' daughter was taken to wife, and his grand-daughter was probably the princess who adopted Moses. Seti rebuilt Zoan that had been demolished by the priest kings, and it is recorded that he used the Semites for this purpose. He constructed the sweet water canal. Rameses II., named Sesostris by the Greeks, was a great warrior. He conquered Nubia, Dongola, and to the Lakes. He held the Soudan and to the Tigris in the East, and to Batoum on the Black Sea. He was a patron of poetry, and the poet laureate of his time, Pentaur, celebrates the colossal columns of Thebes as "Those everlasting stones." Rameses II. undertook to build the Suez canal but was deterred from its further prosecution owing to a soothsayer telling him it would be of more use to foreigners than to Egypt,-a very true prophecy of the present Suez canal. Rameses' statue was only five feet eight and a half inches, but his energy of character is stamped upon his every feature even to the raised arm above his breast where it was originally folded over the other arm.

The account of this accident and of the preservation and the recovery of the bodies of the long line of sovereigns of Egypt is very remarkable. When Cambyses conquered Egypt 525 B.C., he attacked the tombs of the kings for plunder, as they were reported to be interred with great wealth. We are told he found the great stone sarcophagi opened and rifled of their bodies. What had become of them? The story is well known of their discovery but a few years since, when some Englishman, rummaging for antiquities, found an opening at the bottom of a well to a long cavern where he made the discovery of a great number of mummies thrown in higgeldy-piggeldy without regard to rank or condition. These proved to be the long sought bodies of the kings. Doubtless some devout and patriotic native had rescued them from the sacrilegious touch of the invader. When the recent discoverers were moving these mummies the Arabs who were assisting the Englishmen observed the arm of one slowly rising and they rushed terror stricken from the cavern shouting, "The devil; the devil." Nor could they be persuaded to re-enter the cavern. The two Englishmen had to pursue their work alone, and soon solved the problem of the risen arm. It was due to the sun's rays falling through an aperture on one spot at the side and melting the wax or pitch that bound down the arm. From papyri accompanying other mummies, among other valuable works that have been found was the lost book of Aristotle entitled, "The Politics of Athens." The only royal mummy not found is that of Meneptah, the Pharaoh of the Exodus, the successor of Rameses II. The Egyptian priests have recorded that in the 3rd and 4th year of his reign the calender was rectified by observing the time of the rising of Sirius. This as we know, and as they had observed, completes its cycle every 1,461 years. They reckoned 28 days to the month, 12 months in the year, and then again by solar reckoning till the years came to be within six hours of ours; not a bad evidence that they were neither uncivilized or unscientific. This rectification of the calendar helps us to fix the date of the Exodus.

Until recently a station on the Egyptian railroad was called Rameses, more appropriately changed to Tel-el-Kebir, where so many of the noble sons of Britain a few years ago sacrificed their lives. This place proved to be not Rameses at all, but Succoth (pron. Suk Koot) which was the name of the civil city. Within was another or sacred city, called Pithom (Pitoom). These names are found on many remains; in the centre of the sacred city is found the substructure of an immense building; it covers 2,000 yards square—possibly two acres—and is built in compartments of sun-dried bricks, the walls being sixteen feet high, and in compartments having no communication with each other,

Digitized by Google

but with corbels for beams to rest upon above, and if the apartments were accessible it must have been from above only. Now the bricks in these walls are of three kinds: in the lower stratum they are of clay mixed with straw, such as their bricks were generally made of; the intermediate stratum of brickis clay mixed with water weeds and rushes (the real meaning of "stubble" in the Bible, evidently the word indicating a water plant), and the upper tiers of bricks are without either straw or rushes. How can this undesigned coincidence be gotten over?

Again the name of Goshen is never recorded after the Exodus. The Counties or Nomes of Egypt were settled under Seti I., but were added to by Rameses, at which time Goshen was converted into the Nome of Arabia or "Gesem Arabia," the name by which it was afterwards known. How, we enquire, could any writer 1,000 or 1,500 years after the name was lost know it and use the same?

Another of these undesigned coincidences is the addition that was made in the later list of clean animals given in Deuteronomy where are added eleven names of beasts and birds, most of which could not exist in cultivated Egypt nor in wooded and hilly Palestine, but which were only in the wilderness, as the mountain wild goat, the various antelopes, and the Bakker or wild cow. This shows most conclusively that the record could only have been written where the facts of natural history were known, and at the time and place where they took place. He based his faith on one such fact more than on all the surmises of scholarship so called. These animals can be identified by the similarity of the Hebrew and vernacular Arabic names. They still occur in the Sinaitic desert, which alone is suited to their habits. When Israel came out of Egypt, they were unacquainted with them, and therefore they are not named in the catalogue of Leviticus, but after 39 years sojourning in the desert, they were naturally familiar with them, and so they are named in their later list. How could Hilkiah or Jeremiah or Ezra, or any later writer have inserted these names of animals which they could not have known, for none of them ever visited the wilderness of their wanderings?

The attempt to make the way of the children of Israel not across the Red Sea, but through the Sarbonian bog at its head had singularly failed. Pi hahiroth had been established, and the stages of eleven days' journey to Sinai was confirmed by a letter found in a tomb, 400 years later, of an Egyptian gentleman to his friend describing his pursuit of two valuable runaway slaves. He gives the same names of the stations and the same time of eleven days as the account in Deuteronomy, to Sinai.

The lecturer remarked on the course pursued by the Israelites, that he observed on his recent trip down the Red Sea that in the early spring there was pasturage all along the western slope of the interior high lands for large herds of cattle, and that the Israelites were led out of the usual course to avoid the large force of soldiers stationed in the usual course of travel towards Canaan.

The lecturer had only time to mention one more coincidence, that of the most recent discoveries in Lachish. It had been cut down like a slice of plum-cake and its history recorded like a natural palimpsest to be re-read from the latest occupancy. The Turkish, English and French Crusaders, the Roman and Greek occupancy, were each known by its architecture, its coins, and relics. Then the period of Jewish occupancy, recognized by its bevelled stones like the Phœnician and Syrian, in which style Solomon's temple was built; then a period of rubble and earth corresponding to the time of the Judges, and finally a wall of solid masonry, 22 ft. high and 28 ft. thick, of its original possessors, such as might give colour to the report of the spies that the inhabitants of the land dwelt in towns with walls great and high reaching unto heaven. Pottery taken from the ruins of the Phœnician strata had been sent to Paris and London, and it is declared by competent experts that it could not be later than 700 or 800 B.C. In conclusion the Canon said it is such facts as these that assure us that the Bible is the Word of God and that it will survive all the shocks that may be given it. *Magna est veritas, et prevalebit.*

NOTE.—It should be mentioned that the Lecturer said that as he had not brought data with him for reference he could not be sure that all his dates and dimensions were absolutely exact.

---

During the eighty-eight years of the British and Foreign Bible Society's exstence it has distributed no fewer than 120,000,000 Bibles and Testaments, very many of them gratuitously of course. This number is so enormous that the mind cannot grasp its full meaning. It may be better understood by stating that, assuming there are 300 working days in a year, it repersents an average daily distribution of nearly 4,500 copies.

## *HINTS UPON THE FORMATION OF COLLECTIONS OF JAPANESE ART.*

*Artistic Japan*, which all its readers will hear with regret is shortly to complete its issue, cannot have existed in vain. Some portion of the seed which it has scattered broadcast over the world must have fallen on good ground and brought forth good fruit. In addition to those who, previous to its appearance, affected an interest in Japanese Art, and whose interest it has strengthened, there must be many who through its teachings have been led, not only to take up its study seriously, but to become collectors of Japanese wares.

It cannot, therefore, be altogether out of place that one of the closing articles should take as its subject some suggestions and advice to those who come under this last-named category.

I am the more emboldened to offer these because I have myself oftentimes suffered from the want of any source to which when commencing to study and collect, I could turn for guidance, and also because I feel that the time has come when all classes of Japanese collectors should regard their possessions in a more serious light than they have hitherto done, and that each and all should endeavour to assist in the elucidation of the vast field which still lies unexplored before them.

The subject divides itself into the following heads: What to collect; How to collect; How to treat a collection when made.

The question, What to collect? may seem at first sight to carry its answer with it, namely, Anything distinctly Japanese. By no means. If a collection is to have any individuality, any increasing value, any abiding interest for its owner, if he is to become on terms of intimacy with it, and a kinship, as it were, is to exist between himself and each piece of it, it must have strict and abiding limitations which the owner must make up his mind never to depart from.

The first of these limitations is as to the branch or branches of the Art which shall be selected for collection. If there is one thing in Japanese Art which there is no gainsaying, it is its extraordinary variety. To such an extent does this permeate it that if a single branch only be collected, and the collector be endowed with ample means and ample opportunity, he will probably never arrive at a time when he will have to stop for lack of specimens dissimilar to anything that he possesses. If therefore, he ranges over the varied branches of Art, no house will hold any representative collection of each, and few purses will be deep enough to supply the where withal to acquire them.

For this reason, if for no other, a choice should be made at the outset and adhered to.

Amongst the varied branches from which a selection may be made we may enumerate pictures (on rolls), engravings (coloured and plain), books, pottery, and porcelain, silks and stuffs (including costumes), lacquer, metalwork, carvings in wood, ivory, etc., household wares, or even articles made of particular materials, as for instance, bamboo. Or the collection may be formed independently of the object, as for instance, representations of the flora, the zoology, the religions, the history, the manners and customs, the myths and folklore of the country. There is much to be said for this method. Professor Church, for instance, has a quite representative collection of Japanese flora depicted on sword-guards, in that most difficult of mediums, wrought and chiselled iron.

Or, again, the collection may be made according to the occupation or tastes of the collector. As regards this, opinions differ. For instance, one would imagine that the sculptor would be attracted towards the bronzes with their marvellous patinas, or even towards the tiny netsukes; the silk merchant towards old dresses, and the goldsmith towards metalwork. But this is not by any means always or usually the case, and the reason is not far to seek; half the delight of collecting is the relaxation which it affords from the cares and troubles of business, and this can certainly best be done by something which is as entire a diversion from the day's work as possible; this will not be altogether the case if the thing collected is at all akin to the profession of the collector.

But there are other considerations besides these which should influence the choice. And the first is the capacity for storage at one's disposal. A bachelor, especially a confirmed one, may indulge in fragile china, whilst a man with children and careless housemaids may find it necessary to confine himself to substantial bronze. One who lives in a mansion may buy colossal Buddhas, while he who can only spare a corner of his dwelling-room must acquire nothing which will not go into a drawer. But Japanese Art adapts itself to everybody's requirements. A museum is not too large to adequately represent one phase of it; a couple of thousand examples of its finest art may be so stored away in a room that no one need be aware of their presence, as is the case with the writer's collection.

Then, again, there is the consideration of the length of one's purse; a very serious one, for it is astonishing how much money may be invested in a tiny drawer full of objects; and nothing is more disheartening than to find oneself face to face with an object absolutely essential to the completion of a link in one's collection, and no sufficient balance at the bank with which to acquire it. So then it is no use for one who has not a large margin on the right side between income and expenditure to embark upon costly pieces of lacquer, or he may find himself at the end of his tether before he has half-a-dozen pieces; and, on the other hand, he who is in that enviable position should confine himself to the finest piece, not only because in the long run they are the best investments, but naturally, the acquirers being limited, they are usually comparatively the cheapest.

There is yet a further matter to which I attach considerable importance, namely, that the collector should not collect one, but two branches, and these should, so far as they fall in with the conditions of space and purse, be as unlike one another as possible. I advise this for more than one reason. First of all I do not think I am singular in feeling that one is apt at times to tire even of one's *bibelots*, even when they are not confined to a single class of objects. I find that, as the year goes on and one gets jaded and fagged with work, a nausea springs up even for the most dearly beloved acquitions, and that the key is turned upon them when the summer holiday commences without any parting pang. Fortunately in such a case absence makes the heart grow fonder, and one looks forward to seeing them again as for the friend from whom one has been long parted. Not only to mitigate, and possibly to avoid this, is it advisable to divide one's attention between two branches, but also because a collection is in this case much more likely to interest outsiders.

This may perhaps be a convenient place for noting a word of warning. All ugly things should be avoided, for nothing will so soon induce a distaste for Japanese Art. Compared with other kindred countries, Japan art is remarkably free from monstrosities and hideosities. Instead of, as in Indian and Burmese art, a great portion of it being composed of hideous representations of deities which have not even grotesqueness to recommend them, it has, apart from its illustrations of religious personages, little that is ugly. Curiously enough up to a certain period, the older the art the freer it is from this, and it is a remarkable fact that just now the Japanese artificer's mind seems to be imbued with an idea that what the foreigner likes is ugliness, and in every way he shapes his wares accordingly. Only a few days ago I came across a quantity of newly made sword-guards upon which every form of ugliness had been perpetrated.

Most people will prefer to collect objects which have a flavour of antiquity to those of more modern aspect, although in the one case there is a great chance of deception, and in the other none. But there are few modern wares which are now well enough made to be worthy of collection. One class of objects must certainly be avoided, and that is those which have the slightest western influence apparent in either their shape, decoration, or material. But interesting collections might be formed easily and very cheaply of the household wares which in a very few years European and American importations will have driven out of use. My own collection is composed of articles which have fallen into this category. It consists of swords and sword furniture, the use of which has been forbidden by imperial edict; medicine cases, and the beads and netsukes attached to them; all of which, if not already disused, are rapidly becoming so. These have three very special attributes, which entitle them to consideration by collectors. In the first place, they have the personality of the owner attaching to them, and which it is not difficult to arrive at when examining them; in the second place, they have for the most part received much consideration at the hands both of their maker and their owner, for they were the only articles of attire (except garments) which could be lavishly decorated; and lastly, they have not as yet been sufficiently collected over here to warrant modern reproductions of them being made. Additional reasons are their compactness; their comparative cheapness; in the case of medicine cases—their illustrating in the finest way every phase of lacquer manufacture; and in that of sword furniture every phase of metal-work; besides this they are exceptionally strong in illustrations of folklore, history, religion, and the flora and zoology of the country.

An advantage of confining oneself to the collection of certain specialities is this, and it is by no

means an insignificant one, especially if the collector does not inhabit the metropolis, that the dealers get to know what he wants and what he does not, with the result that when anything likely to suit comes to them they will buy it with a view to his needs, and he will in this way have as good opportunities, if he be a liberal buyer, that is one not given to haggling and beating down, as if he lived in town.

The second section of my hints, namely—How to collect—may be dealt with more cursorily.

First of all, do not begin without previous study. Time, money, and the accumulation of much which it will be troublesome afterwards to be rid of will then be saved. It is true that opportunities for this study are rather difficult to obtain. Not only the English but the French museums still put off the acquisition of what they will one day have to pay very dearly for, and when they do buy do not always exercise discrimination. To private collectors, therefore, the student will have to turn for information, but my own experience of them is that they are not only too ready to show their treasures, but to impart all their knowledge. Reliable text-books on the subject are few and for the most part expensive, two of the best being, for Pictorial Art, Mr. Anderson's work, and for all the decorative arts, except lacquer, Gonse's *L'Art Japonais*. A reliable text-book has still to be written upon lacquer, and in fact upon almost every branch of the industrial arts. Much can be learnt from photographs, and collectors would earn the gratitude of their brethren if they would, as Mr. Gilbertson has done, photograph and circulate impressions of their most noteworthy pieces.

Do not buy too quickly. Know every piece in your collection by careful examination and comparison. This it is impossible to do if you buy a score of pieces every week. Duplicates do not often occur in Japanese Art, but you should know your collection so well as never to commit such an error as to acquire unwittingly two similar objects.

Never buy in lots. It is only natural that dealers should try to avoid being left with the indifferent pieces of a lot, but pay more rather than be saddled with what will only cumber and degrade your collection.

Never beat down the wares with a dealer you know. It not only results in his raising the price of the next article which he offers you, but if it is a question between yourself and another customer as to which shall have the first sight of new things, you will not be the fortunate one.

Have a few things and good rather than many and second-rate, and consequently never hesitate to turn out and sell for anything it will fetch a doubtful piece.

Never lose an opportunity of acquiring a piece which constitutes a missing link in your collection: in Japanese Art so rare is the chance of obtaining a duplicate that in one branch of my collection I have retained two almost similar pieces merely as a curiosity.

Never think it too much trouble to look through what may appear to be rubbish—one not only gains experience, but there is always the chance of a find. Few collectors but have had more than one pleasant experience in this way.

And now, lastly, for a few hints as to the collection when started. There are few pieces which do not improve by being carefully cleaned when they get home. Wood-carvings and lacquer should be rubbed with fine cotton wool upon which a little siccative linseed oil has been placed, and afterwards polished with a fine silk handkerchief, great care being taken that there is no dust or grit in either wool or handkerchief. Metalwork, especially if rusty, should be treated by the following process, which has the high authority of Professor Church to recommend it. Dissolve about an inch of stick potash in a quarter of a pint of warm water, then totally immerse the object for about five minutes, after which rinse in hot water until the latter is no longer discoloured by rust or dirt. If the articles should unfortunately have been coated with vaseline or paraffin oil, they must be previously rubbed with oil. When dry the specimens should receive a light coating of siccative linseed oil; after this has been rubbed in with a plate brush, any excess producing a gloss must be removed with a cloth or with pads of carded cotton. Neither shibuichi, shakudo, or incrustations of gold and silver will be harmed by this process.

Metalwork is often defaced by the labels having been affixed with injuriously-compounded gum, containing sulphuric or nitric acid, which has almost removed the delicate patina. Nothing remains in this case but to ease away the edges of the mark with oil and fine cigar-ash very delicately applied, and so render it less noticeable. A note of warning must be sounded against keeping metalwork with delicate patinas wrapped up in newspaper, the ink from which will oftentimes indelibly imprint itself upon the surface.

Having cleaned the objects, the next thing should be their cataloguing and numbering. This should not be neglected for any length of time, or difficulties will certainly ensue. A separate drawer should be reserved for uncatalogued pieces. It is not necessary for me to speak of how articles should be catalogued, but I have found it convenient to have different books for different articles, such as netsukes, inros, and sword-guards. Do not affix huge unsightly tickets to the articles themselves. A very small one will suffice for the number, the maker's name, and the price paid (in private hieroglyphics); if the owner prefers to paint the catalogue numbers on the article itself it should be done with artist's white oil paint toned with raw sienna and thinned with turpentine, so that it can be used with a pen, and strengthened with a little copal or amber varnish.

Finally, let everything look cared-for and precious. A Japanese, we know, bestows infinite care upon his treasures, not only wrapping them in the finest silks, but encasing each one in its own special box. French collectors often imitate him, and always tend their treasures more artistically than Englishmen. Not only do they place them in cabinets which are of themselves objects of art, but they dispose them therein upon rich stuffs and in an artistic manner. No doubt this may be carried too far and the objects themselves may suffer from too costly and elaborated settings, but this is a fault on the right side. I have tried various colours and have come to the conclusion that for everything (except silver and gold, for which royal blue is the best) there is nothing like pure white, dove colour, or a blue-grey, the first for choice. What is known as swansdown serves very well, in fact almost better than velvet.

The collector may wish to keep his various objects apart, but they certainly improve by being mixed in a legitimate manner; medicine cases, for instance, with netsukes and beads, and sword-guards with fuchi-kashira and kozukas.

MARCUS B. HUISH.

## *BASE BALL.*

This game, played on Saturday, resulted in the Tokyo team winning—9 to 6. Following are details:—

## *CRICKET.*

### Y.C. AND A.C. SECOND ELEVEN V. H.M.S. "SEVERN."

This match, played on Wednesday, resulted in a win for the Club youngsters by 168. E. Edwards and Fenton bowled for the Club, and divided the honours between them. Oakley and Freemantle bowled for the ship, most wickets falling to the latter. The prominent feature in the batting was the extraordinary score made by Fenton, who piled up 117 before being caught by Colville off Freemantle. Following are the scores:—

| Y.C. AND A.C. | | H.M.S. "SEVERN." | |
|---|---|---|---|
| Mr. E. Edwards, c. Morgan, b. Freemantle | 39 | Mr. Freemantle, c. Hood, b. Fenton | 13 |
| Mr. Fenton, c. Colville, b. Freemantle | 117 | Mr. Oakley, c. Abbey, b. Edwards | 1 |

### PASSENGERS.

#### ARRIVED.

Per British steamer *Verona,* from Hongkong viâ ports:—Mr. A. Schmidt and servant, Mrs. R. Munson, infant, and amah, Dr. Riise, Mr. P. McLaren, Mr. and Mrs. Bevan, Miss Bevan, Messrs. Renny, Thos. Kerr, McLaren, J. H. Brewster, N. R. Gilbert, Dr. G. J. Fogerty, Dr. Bowker, Mrs. Bartol, and Miss Candee in cabin; 1 Chinese in steerage.

Per Japanese steamer *Sagami Maru,* from Hakodate:—Messrs. Ernest Little, B. Sugi, and T. Harada in cabin; Mr. K. Shimizu in second class, and 17 passengers in steerage.

Per Japanese steamer *Omi Maru,* from Hakodate:—Mrs. Shibada and Mrs. Ono in cabin; Messrs. M. Miyasaki, K. Hasegawa, T. Nakagawa, J. Sonogi, and M. Nakada in second class, and 23 passengers in steerage.

Per Japanese steamer *Yokohama Maru,* from Shanghai and ports:—Mr. and Mrs. Grosser, Dr. and Mrs. Henderson, Mr. and Mrs. H. Gordon Smith, Mr. and Mrs. Crockerham, Mrs. Blanke, Miss Graves, Lieutenant Dunbar, Mr. and Mrs. Okazaki, Misses Okazaki (2), Mr. L. L. Fobes, and Mr. Collin de Plancy in cabin; Mr. Honda and Mr. Kikuchi in second class, and 24 passengers in steerage.

Per French steamer *Natal,* from Hongkong viâ ports:—Messrs. T. Tsuno, T. Kitsunesuki, Baldwin, Bonnel, Mrs. Tatchi, Mr. Reid, Sœur Auguste, Prieux, Joseph, Etienne, and Messrs. E. A. Apcar, H. Delmas, Marshall, and Delbougro in cabin.

#### DEPARTED.

Per French steamer *Calédonien,* for Shanghai via Kobe:—Mr. Edgar W. Exle, Mr. M. Leng, Mr. and Mrs. W. S. Stone, Messrs. R. Kirby, J. S. Hopper, R. P. Carroll, F. Oarnchwerts, G. Morisano, C. Ornobeg, H. Robbins, H. Mauterd, Ch. Gautsch, P. Jalusot, V. Gory, Ancecrut, C. B. Carrol, J. Roberts, J. Lyons, G. Vittor, F. A. Scherzer, and G. Hayes in cabin.

Per German steamer *General Werder,* for Hongkong viâ ports:—Mr. A. W. Schellhass, Mr. T. C. Hyde, Miss Rosa Cavallona, Mr. and Mrs. Groesser, Messrs. C. Myhre, A. Yuill, E. Elfen, Chas. Timmis, Eichel, I.G.N., Krohn, I.G.N, Friedrich, I.G.N., Hillman, I.G.N., and Tensen, I.G.N. in cabin; 13 Chinese in steerage.

Per Japanese steamer *Kobe Maru,* for Shanghai and ports:—Rt. Rev. Bishop Auzer, Mrs. Aulain and infant, Mr. E. H. Tuska, Captain J. W. Lee, Governor Sufu, Mr. Nomura, Governor Kitagaki, General Oshima, Messrs. Nomura, Mayeda, Tojiro, and Hayashi in cabin; Messrs. Yamamoto, Nomura, Fukuda, Tokio, Kobayashi, Bristro Carls, Ota, Misses A. and K. Nomura, Mr. Sakai, Mrs. Tokio and child, and Mr. Tokuda in second class, and 63 passengers in steerage.

Per British steamer *Verona,* for Hongkong viâ ports:—Messrs. E. H. O. Little, J. W. Cardlestone, J. E. Davies, P. Kerr, and Kuo Chuck Wan in cabin; 1 seaman, R.N., 4 Chinese, and 3 Japanese in steerage.

### CARGOES.

Per French steamer *Calédonien,* for Shanghai viâ Kobe:—Raw Silk for France, 125 bales; Waste Silk for France, 77 bales.

Per British steamer *Verona,* for Hongkong viâ ports:—Raw Silk for France 46 bales; Waste Silk for France 51 bales.

### REPORTS.

The Japanese steamer *Satsuma Maru,* Captain Brown, reports:—Left Kobe the 20th June at noon; had moderate easterly winds with passing rain showers to Oshima, which was passed at 8.50 p.m.; thence fresh to strong N.E. winds with moderate head sea and constant downpour of rain up to Sagami, which was passed at 5.45 p.m. on the 21st; thence gentle N.E. winds with drizzling rain up to port. Arrived at Yokohama at 7.50 p.m.

The Japanese steamer *Sagami Maru,* Captain Hussey, reports:—Left Hakodate the 20th June at 2 p.m.; had strong E.S.E. winds with overcast weather and high sea down to Shiriya-saki, which was passed at 6.40 p.m.; thence moderate breeze and misty and foggy weather and moderate south-easterly swell down to Yamada, which was passed at 7 a.m. on the 21st; thence light variable winds and cloudy weather and moderate easterly swell to Oginohama, arriving there at 5 p.m., having passed Kinkasan at 3.29 p.m. Left Oginohama the 22nd at 5.15 a.m.; had fresh breeze from the east with overcast weather and heavy rain, weather clearing up before noon; had light variable airs with fine weather and moderate easterly swell to Inuboye, passing at 10 p.m.; thence fresh W.S.W. breeze with fine weather to Noshima, which was passed at 6 a.m. on the 23rd; thence light variable winds to port. Arrived at Yokohama at 10.35 a.m.

The Japanese steamer *Sendai Maru,* Captain Speigelthal, reports:—Left Kobe the 22nd June at noon; experienced light winds and fine weather to Oshima; thence to Rock Island had gentle S.W. breeze and smooth water; passed Rock Island at 0.12 p.m. on the 23rd and passed a full rigged ship bound up the bay; light winds and smooth sea until time of arrival.

The Japanese steamer *Omi Maru,* Captain J. Wynn, reports:—Left Hakodate the 22nd June at 2 p.m.; had light variable winds and thick fog to Kinkasan; thence to port light south-westerly winds with hazy weather. Arrived at Yokohama the 24th June at 1 p.m.

The Japanese steamer *Wakanoura Maru,* Captain Kenderdine, reports:—Left Kobe the 24th June at noon; at 5 p.m. put into Yura for shelter; at midnight heavy winds from S.E. with heavy rain thunder and lightning; at 5.20 a.m. left Yura with moderate winds from the south and dull cloudy weather throughout the day; at 2.30 a.m. on the 26th passed Rock Island. Arrived at Yokohama at 9.15 a.m.; moderate southerly winds and dull cloudy weather throughout the passage.

The Japanese steamer *Yokohama Maru,* Captain Swain, reports:—Left Shanghai the 20th June at 9 a.m.; had light winds with fine weather. Arrived at Nagasaki the 22nd at 2.30 a.m. and left at 5 p.m. Arrived at Shimonoseki the 23rd at 5.10 a.m. and left at 10 a.m.; had fine weather and pleasant throughout the passage. Arrived at Kobe the 24th at 6 a.m. and left the 25th at noon; had moderate to fresh S.W. winds with rain. Arrived at Yokohama the 26th June at 3 p.m.

## *LATEST COMMERCIAL.*

### IMPORTS.

Markets are reported to be somewhat quieter, owing it is said to the favourable weather for rice planting having monopolised the whole attention of the country folks, whilst the improvement in Sterling Exchange has caused importers to press sales, and following on a considerable business in Yarns and Shirtings done previously for arrival, dealers have responded very sparingly to the irregular quotations reported. Sales for the week comprise about 750 bales Yarn, more than half the quantity being composed of two-folds and 10 bales of Bombays, 5,000 pieces 9lb. Shirtings, 850 pieces 8¼lb., 2,000 pieces T.-Cloths, 1,200 pieces Italian Cloth, and 3,000 pieces Mousseline de Laine, with some trifling sales of Flannel, Serges, and other Woollen and worsted Goods.

#### COTTON PIECE GOODS.

| | per piece. |
|---|---|
| Grey Shirtings—8¼lb, 38½ yds. 39 inches | $1.50 to 2.10 |
| Grey Shirtings—9lb, 38½ yds. 45 inches | 1.75 to 2.45 |
| T. Cloth—7lb, 24 yards, 32 inches | 1.20 to 1.45 |
| Indigo Shirtings—12 yards, 44 inches | 1.20 to 1.50 |
| Prints—Assorted, 24 yards, 30 inches | 1.40 to 1.90 |
| | per yard. |
| Cotton—Italians and Satteens Black, 32 inches | 0.07 to 0.15 |
| | per piece. |
| Turkey Reds—1¾ to 2¼lb, 24/25 yards, 30 inches | 1.10 to 1.17½ |
| Turkey Reds—2¼ to 3lb, 24/25 yards, 30 inches | 1.30 to 1.47½ |
| Turkey Reds—3¼ to 4lb, 24/25 yards, 30 inches | 1.75 to 1.97½ |

### METALS.

Market practically unchanged. The temporary rise in Exchange gave buyers a hope that prices of metals would relax a little; but the partial subsequent decline has assisted holders to maintain values.

| | PER PICUL. |
|---|---|
| Flat Bars, ½ inch | $2.80 to 2.90 |
| Flat Bars, ¼ inch | 2.85 to 2.90 |
| Round and square up to ½ inch | 2.80 to 2.90 |
| Nailrod, assorted | Nom. |
| Nailrod, small size | Nom. |
| Iron Plates, assorted | 2.90 to 3.05 |
| Sheet Iron | 3.10 to 3.40 |
| Galvanized Iron sheets | 6.20 to 6.40 |
| Wire Nails, assorted | 4.50 to 4.75 |
| Tin Plates, per box | 5.50 to 5.75 |
| Pig Iron, No. 3 | 1.30 to 1.35 |

### KEROSENE.

Nothing very lively to note in this market. The Tokyo folks are said to be offering a trifle less for most brands than they did a week ago. The *Gloaming* has arrived from New York with 50,000 cases, also ship *Melanope* with 58,000 cases from the same neighbourhood. Stock appears ample for all purposes. Quotations unchanged but nominal.

QUOTATIONS.

| | |
|---|---|
| Chester | $1.65 to 1.67½ |
| Comet | 1.62½ to 1.65 |
| Devoe | 1.60 to 1.62½ |
| Russian | 1.55 to 1.60 |

### SUGAR.

Browns are still neglected, but there have been some sales of Zarame and Refined both at auction and by private contract. Prices mentioned are "A" $7.20 "B" $6.70, with other qualities at from $6.47½ to $5.25. We leave quotations unchanged, but the market is dull.

| | PER PICUL. |
|---|---|
| Brown Takao | $4.10 to 4.20 |
| Brown Daitong | 3.10 to 3.15 |
| Brown Canton | — |
| Brown Java and Penang | 3.40 to 4.10 |
| White Refined | 4.80 to 7.25 |

## EXPORTS.

### RAW SILK.

Our last issue was dated the 19th inst., since which date settlements on this market are 101 piculs (being about 15 piculs old silk, the rest new) divided thus:—*Filatures*, 63 piculs, *Re-reels* 38 piculs. In addition to these figures, direct export by Japanese is 55 bales, making a total business of 150 piculs for the week.

The old silk mentioned was a consignment of *Bushu Filatures* for Europe through a foreign hong. Stock on hand is about the same as last week and comprises 100 piculs of new staple.

The principal feature of the week has been a sudden rise in exchange, which has disturbed holders considerably. The consequence has been that buyers have been able to operate at gradually declining prices, in some instances a reduction of $20 upon opening rates having been secured. The business done has been chiefly for the United States, a few parcels of ordinary *Filatures* having been taken for Europe at $540 per picul.

The course of our market so far is distinctly opposed to that of last year. Then we had a strong and unwarranted rise in prices, which was the cause of much disaster to our native silk dealers. This year prices have opened at a very moderate figure and show no signs whatever of an advance without any cause such as took place year ago.

The weather continues favourable for the crops which are not yet gathered in; and new silk from Shinshu province will be along in this market by the middle of next month. *Kakeda* silks may also be expected about the same time. We have no reason to alter our last week's estimate of the outturn of the crop.

Small arrivals are now coming in from the Shinshu factories, but as usual they are composed of silk reeled from Joshu and Koshu *Cocoons* and real Shinshu fibre will not be here for another three weeks.

The quality of the new crop improves a little from the very earliest arrivals; and the silk shows more care in the preparation. It is to be expected that the silk this year will run of rather full size, as it is well known that strong, healthy worms make a full sized thread.

There have been two shipping opportunities during the week, the Pacific Mail Steamer *China* on the 20th instant took 114 bales for the New York trade and the French Mail Steamer *Calédonien* on the 21st inst. carried 112 bales for France. These departures bring the present export figures up to 34,252 piculs against 35,722 piculs last year and 41,626 to the same date in 1889.

*Hanks.*—No business for export has been done. Some few parcels of old silk has arrived, but have not found buyers.

*Filatures.*—Several parcels have been taken for Europe in No. 2 silk at $540. For the United States *Koshu* Filatures have been taken day by day at gradually declining rates. A week ago *Yajima* brought $580. The same chop was yesterday done at $560. So far nothing has transpired in silks from Shinshu district, but business will probably be done in them during the day.

*Re-reels.*—Business in these has been restricted for want of supplies. Fresh arrivals are looked for daily. In the meantime a few small lots have been taken into godown at some reduction on last week's rates. Old silks are now enquired for in the absence of new silks.

*Kakeda.*—Nothing done during this week. Buyers are waiting for new silk.

*Oshu.*—In this class nothing has been done. The stock is reduced to about 80 piculs and no business is looked for until the new crop arrives.

### WASTE SILK.

This market has been almost stagnant, and several days have passed without a single transaction. The only sale noted during the week has been 35 piculs Tama-ito which brought about $225 per picul. Of course this was old fibre.

The season is practically closed. A parcel of new *Joshu Noshi* about 10 piculs, has come to hand, and the owner thinks he would like to get about $83 for it. The ideas of buyers are about $10 less. It will probably be some days yet before the market for new Waste really opens.

There have been two opportunities for shipping this week. The French mail on the 21st inst. took 77 bales for Europe and the *General Werder* on the 23rd inst. took 4 bales for Italy. These departures make the present export figures 32,171 piculs, against 29,752 piculs piculs last year and 31,731 to the same date in 1889.

*Pierced Cocoons.*—Two samples of new *Joshu* have arrived. The price mentioned is about $105 for 75 per cent. quality. We fancy that dealers will have to take something less than this before any important business can be done.

*Noshi.*—As mentioned above, a few piculs of new *Joshu* have come in, but have given rise to no business so far.

In other kinds of Waste no business at all has been done. We correct our figures of stocks to agree with the actual quantity now on hand, several important lots of low qualities *Kibiso* having been returned to the country for native use.

| Taysaam Kinds | — | | |
| Total piculs | 1,500 | Total piculs | 2,150 |

### TEA.

Market quiet, with much less doing. Shippers want a reduction in price, but holders do their best to fight against this. Exchange has risen and again partially declined. Sellers hope to see it soon back at last week's rates. Buyers complain of the quality of second-crop leaf, and on that account require a reduction in price. We leave quotations unchanged, but they are far from strong.

## STEAM LAUNCHES & YACHTS

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space accupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachits of 40 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames. &c., &c. We supply sets of Machinery separately. We are also sole makers of the

**KINGDON'S PATENT LIGHT PORTABLE ENGINE**

Stock sizes, 1½ to 6 H.P. Burns less fuel, and gives *three times the power*, weight for weight, of any other engine. Awarded First Prize by Royal Agricultural Society England, 1890, in competition open to all makers.

*Illustrated Catalogue in English, French, or Spanish Send for Copy to*

## SIMPSON, STRICKLAND & CO.

WORKS: DARTMOUTH, SOUTH DEVON (ENGLAND), LONDON OFFICE: 181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated) — the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

**KEATING'S INSECT POWDER.**

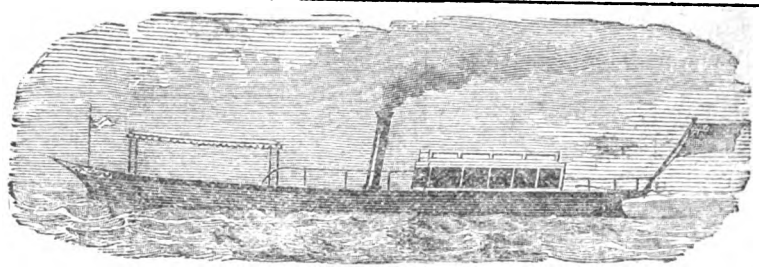
BUGS, FLEAS, MOTHS, BEETLES, and all other insects, are destroyed by KEATING'S INSECT POWDER, which is quite harmless to Domestic Animals. In exterminating Beetles the success of this Powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application. Ask for and take no other than "KEATING'S POWDER," as imitations are noxious, and fail in giving satisfaction. Sold by all Chemists, in Tins and Bottles.

**THE GREATEST WONDER OF MODERN TIMES.**

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.
